PRESENTER EDITION · 10:00 TO 12:00 · MONDAY, NOVEMBER 9, 2026 · DARWIN ROOM, PRINCETON

The Future *of Freshness*

Every scene as it'll look on the TV, at its last build, with its time and talking points. The morning is meant to be a conversation. It runs in three parts, built around Ross's four objectives, each opening in his words. People score the tasting and vote once from their phones, and whatever we decide together gets typed in live and becomes the Playbook at the end. 23 scenes in the morning, plus "Your pre-brief answers" once the answers are in, then 16 backup slides for questions. The live presentation is at /host, opened from the team link. Use the right arrow or click to go on,] to jump to the next part, S to skip the slides marked optional, F for full screen and N for the talking points.

TIME	PART	OBJECTIVE	SCENES
10:00 to 10:10	Welcome, introductions and what we want to accomplish		1 to 6
10:10 to 10:22	Market highlights and a quick overview of the four directions	01	7 to 12
10:22 to 10:25	A short film before the tasting		13 to 14
10:25 to 11:00	A blind tasting of all four samples, scoring and the reveal	02	15 to 16
11:00 to 11:20	Discussing your reactions and choosing the most promising opportunities		17 to 19
11:20 to 11:40	Fleshing out one or two ideas and discussing next steps	03 and 04	20 to 21
11:40 to 11:50	Reading back the plan and making sure everyone agrees		22 to 23
11:50 to 12:00	Time for discussion, questions or anything that runs long		24
Any time	Backup slides		25 to 40

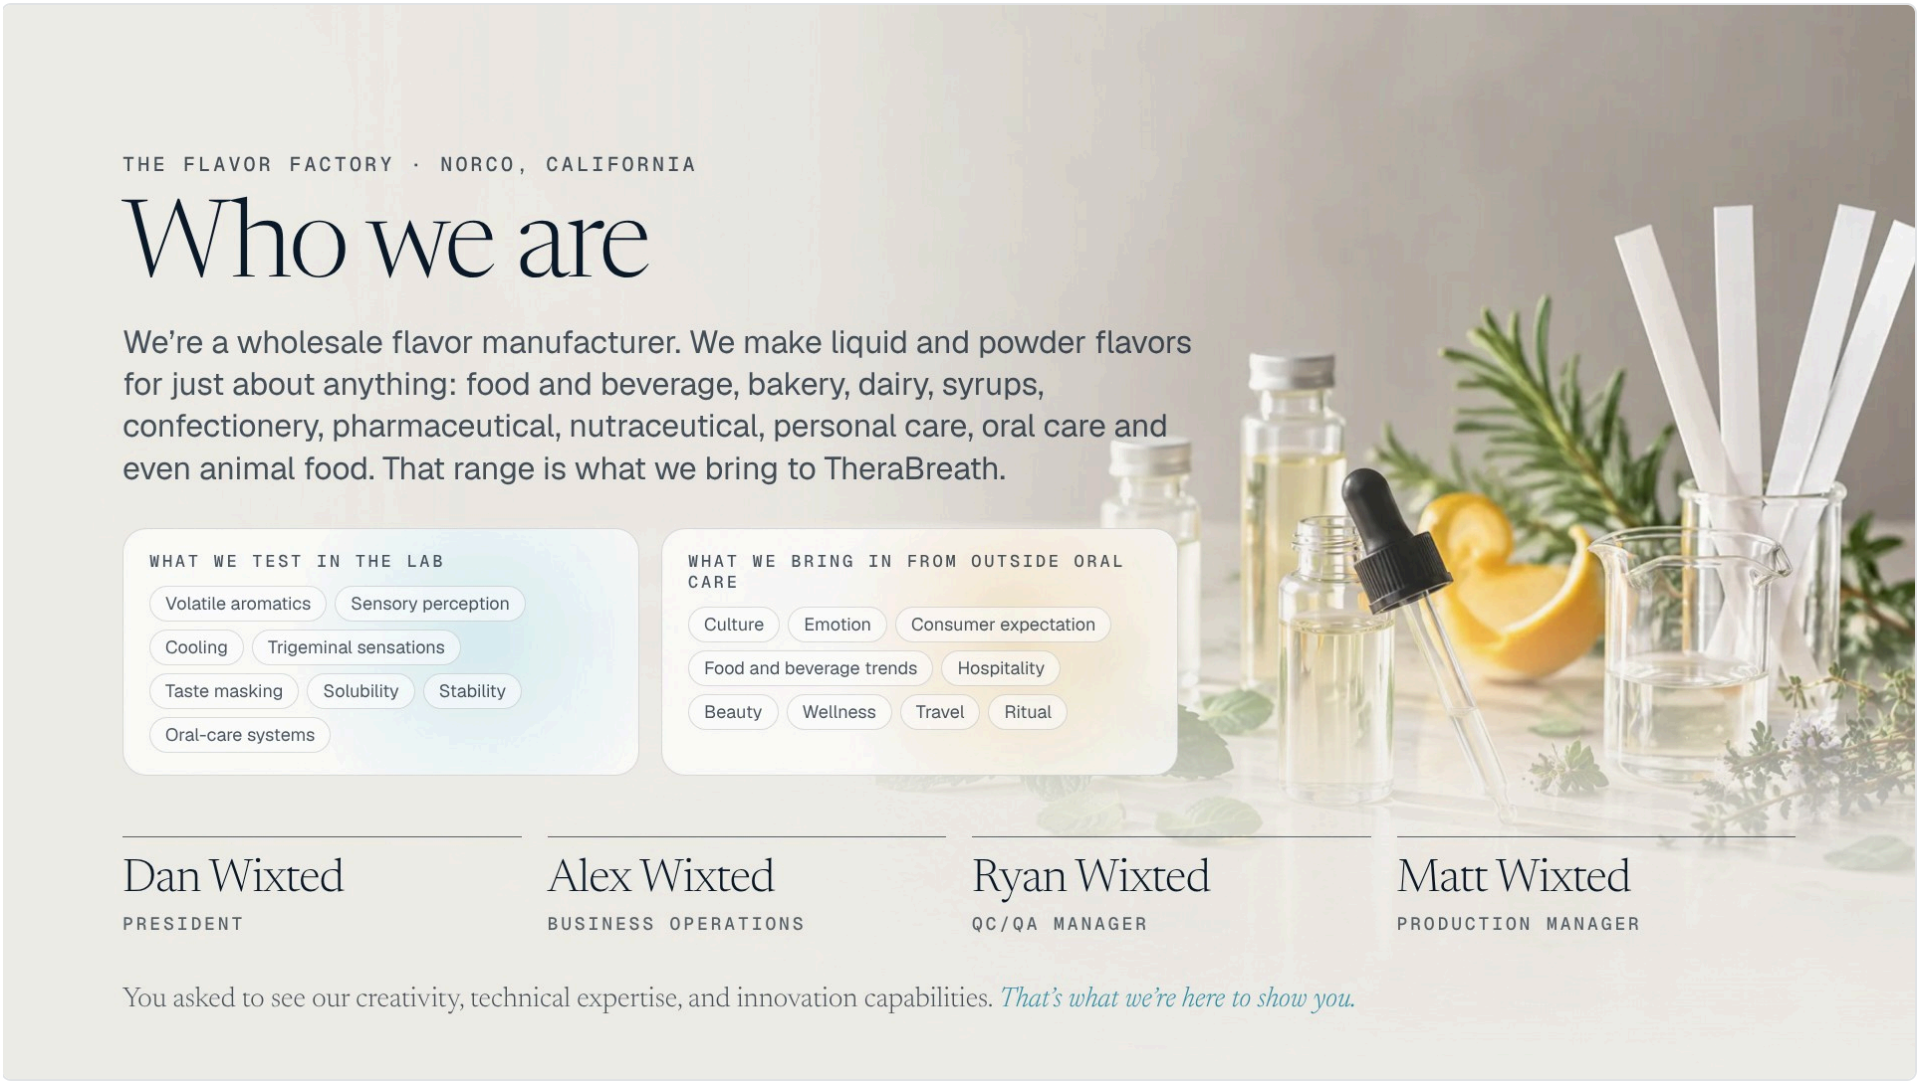

Confidential. For The Flavor Factory team; not for distribution.

- At 9:30, Ross is meeting us to help with the Wi-Fi and the room.
- Get the laptop on the TV and press F for full screen. Do the sound check on the rehearsal session before anyone arrives (see the run sheet).
- No film to open: we start with our own welcome.
- As people sit down, ask them to scan the code. Their names pop up on screen as they join.

- At 10:00, welcome everyone and thank Ross for inviting us.
- Set up the two hours around three things: what's changing, what the samples tell us, and what we should work on next.
- Phones come out twice: to score the tasting and for one vote.

- Introduce the four of us and what each of us does day to day.
- Say a word about the range of our work: as a wholesale flavor manufacturer we make liquid and powder flavors for just about anything, with a focus on naturally derived flavors. A lot of it is custom work, developed with clients as their own proprietary flavors, and that range feeds what we bring to TheraBreath.
- Then a quick round of names around the table, so we know who's who on the Church & Dwight side.

WHAT WE WANT TO ACCOMPLISH

Three things this morning, *built around your four objectives.*

01 What's changing

01 Identifying emerging flavor, sensory, and consumer trends that could influence the future of oral care.

10:10 TO 10:22

02 What the samples tell us

02 Exploring new flavor territories and sensory experiences that can differentiate TheraBreath from competitors and create memorable consumer experiences.

10:22 TO 11:20

03 What we work on next

03 Developing innovative flavor concepts that unlock new usage occasions, address new consumer segments, and create opportunities for portfolio expansion.

04 Generating a pipeline of innovation platforms, flavor directions, and white-space opportunities that have the potential to drive incremental growth across the portfolio.

11:20 TO 11:50

AND THE GOAL BEHIND THEM

"...new flavor experiences that both *strengthen our appeal with existing loyal users* and *create opportunities to attract new consumers to the franchise.*"

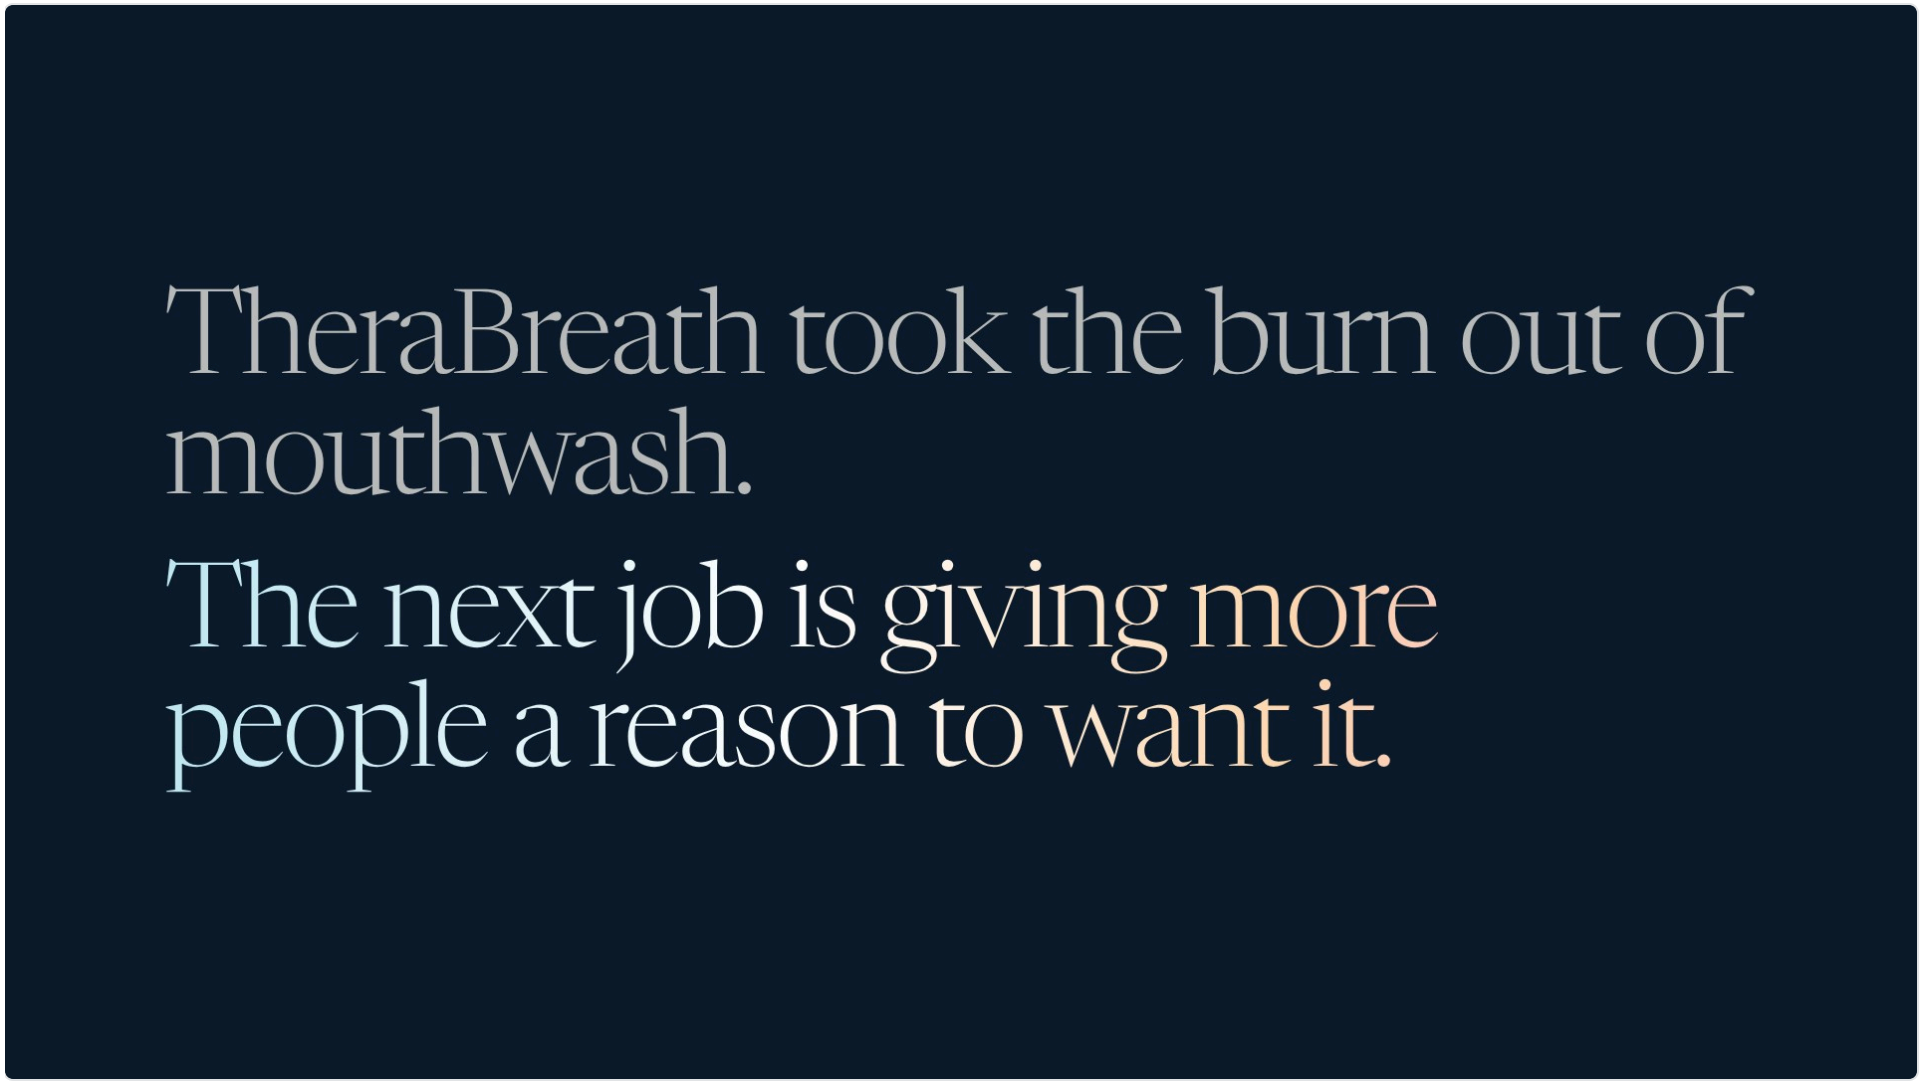

Source: Ross Conroy, Church & Dwight Oral Care R&D, workshop invitation, September 18, 2026

- Three parts, built around Ross's four objectives. Each click opens one part with his objectives in his words, and its time.
- The last build is his goal: flavors that keep loyal users coming back and bring in new ones.
- This covers what Ross asked for: trends, new flavor and sensory ideas, opportunities beyond the current range, and a path for developing them.

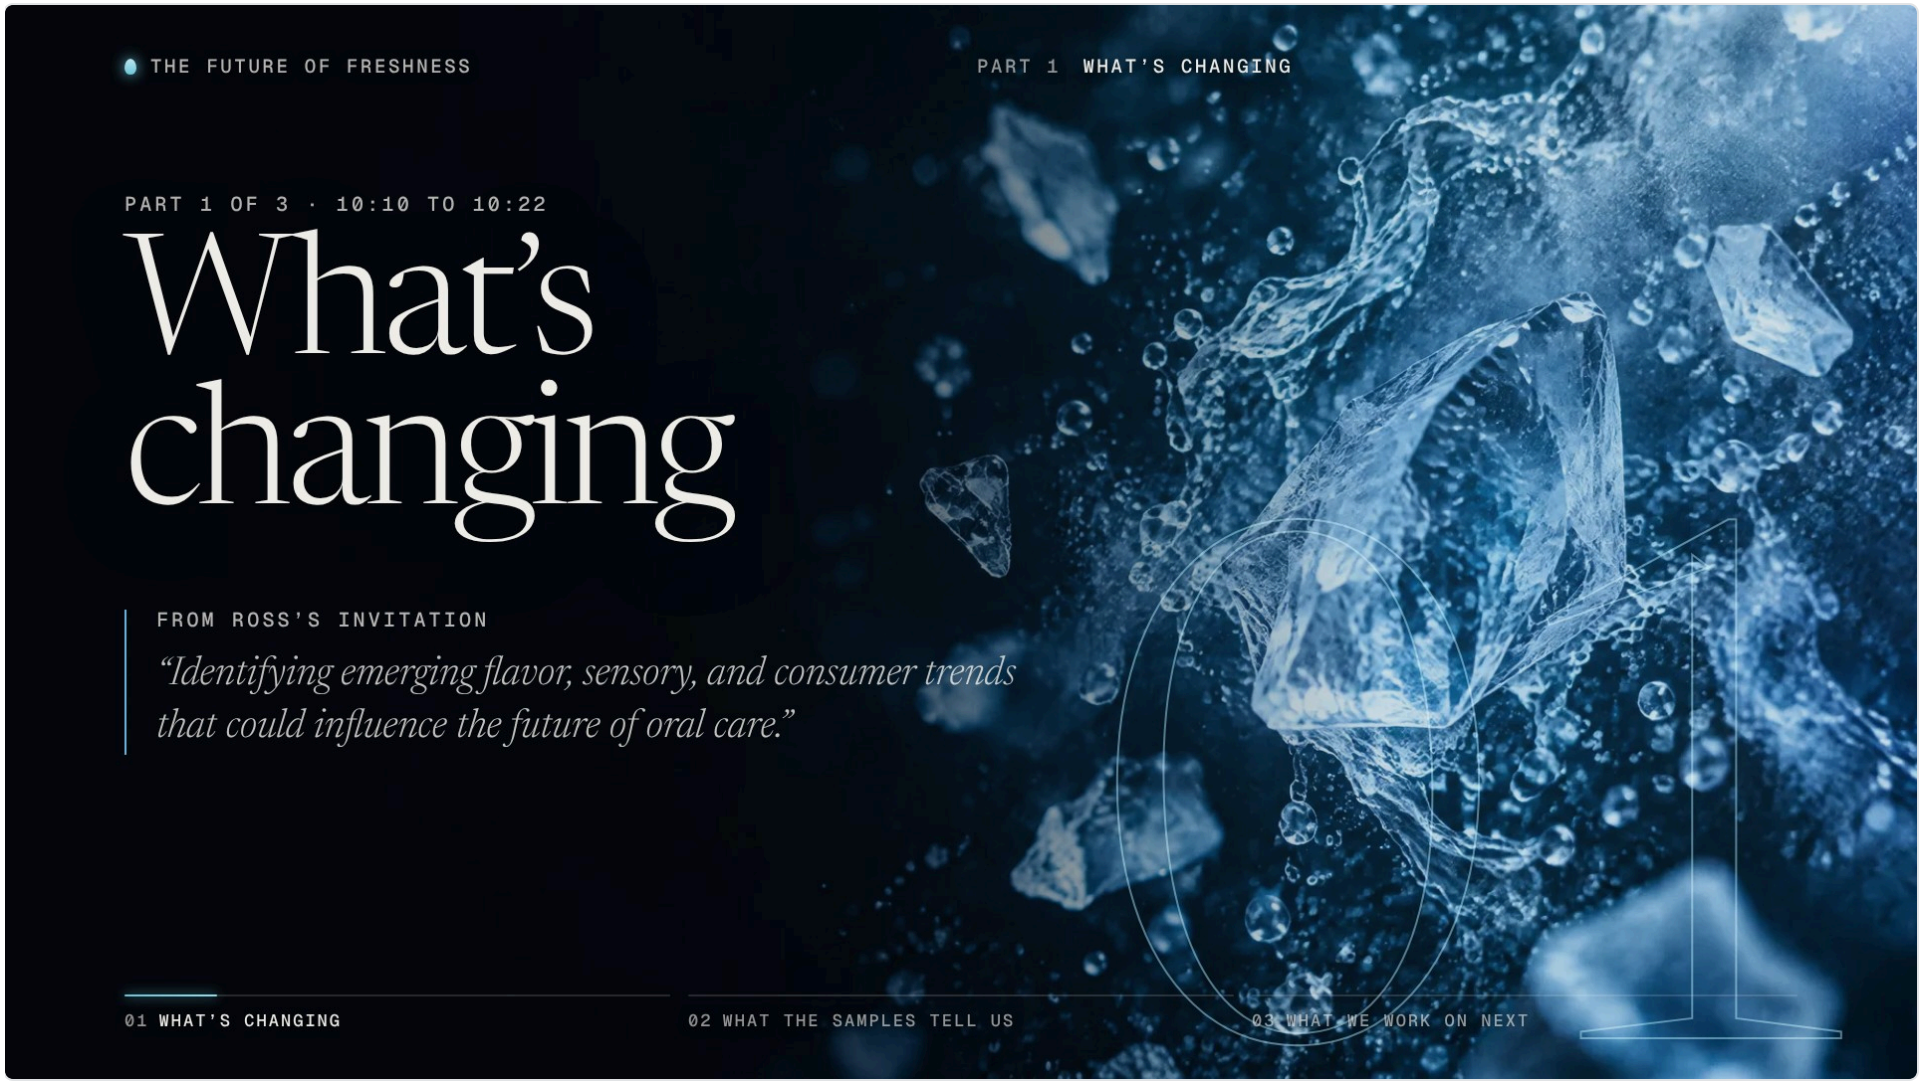

This scene shows up once at least one pre-brief answer is in (the pre-brief went out on November 3). It opens on who they think TheraBreath's next flavor should be for, then the moment TheraBreath is missing with the group's freshness profile, then what would feel off-brand, all without names. Until then the presentation goes straight from 4 to 6.

- These are their pre-brief answers: who they think TheraBreath's next flavor should be for, and the moment TheraBreath is missing. Treat them as a starting point for the conversation, not consumer research.
- Ask about the off-brand answers: what makes each one feel wrong for the brand? There are no names on screen.

10:00 TO 10:10 1 BUILD OPTIONAL IF LATE

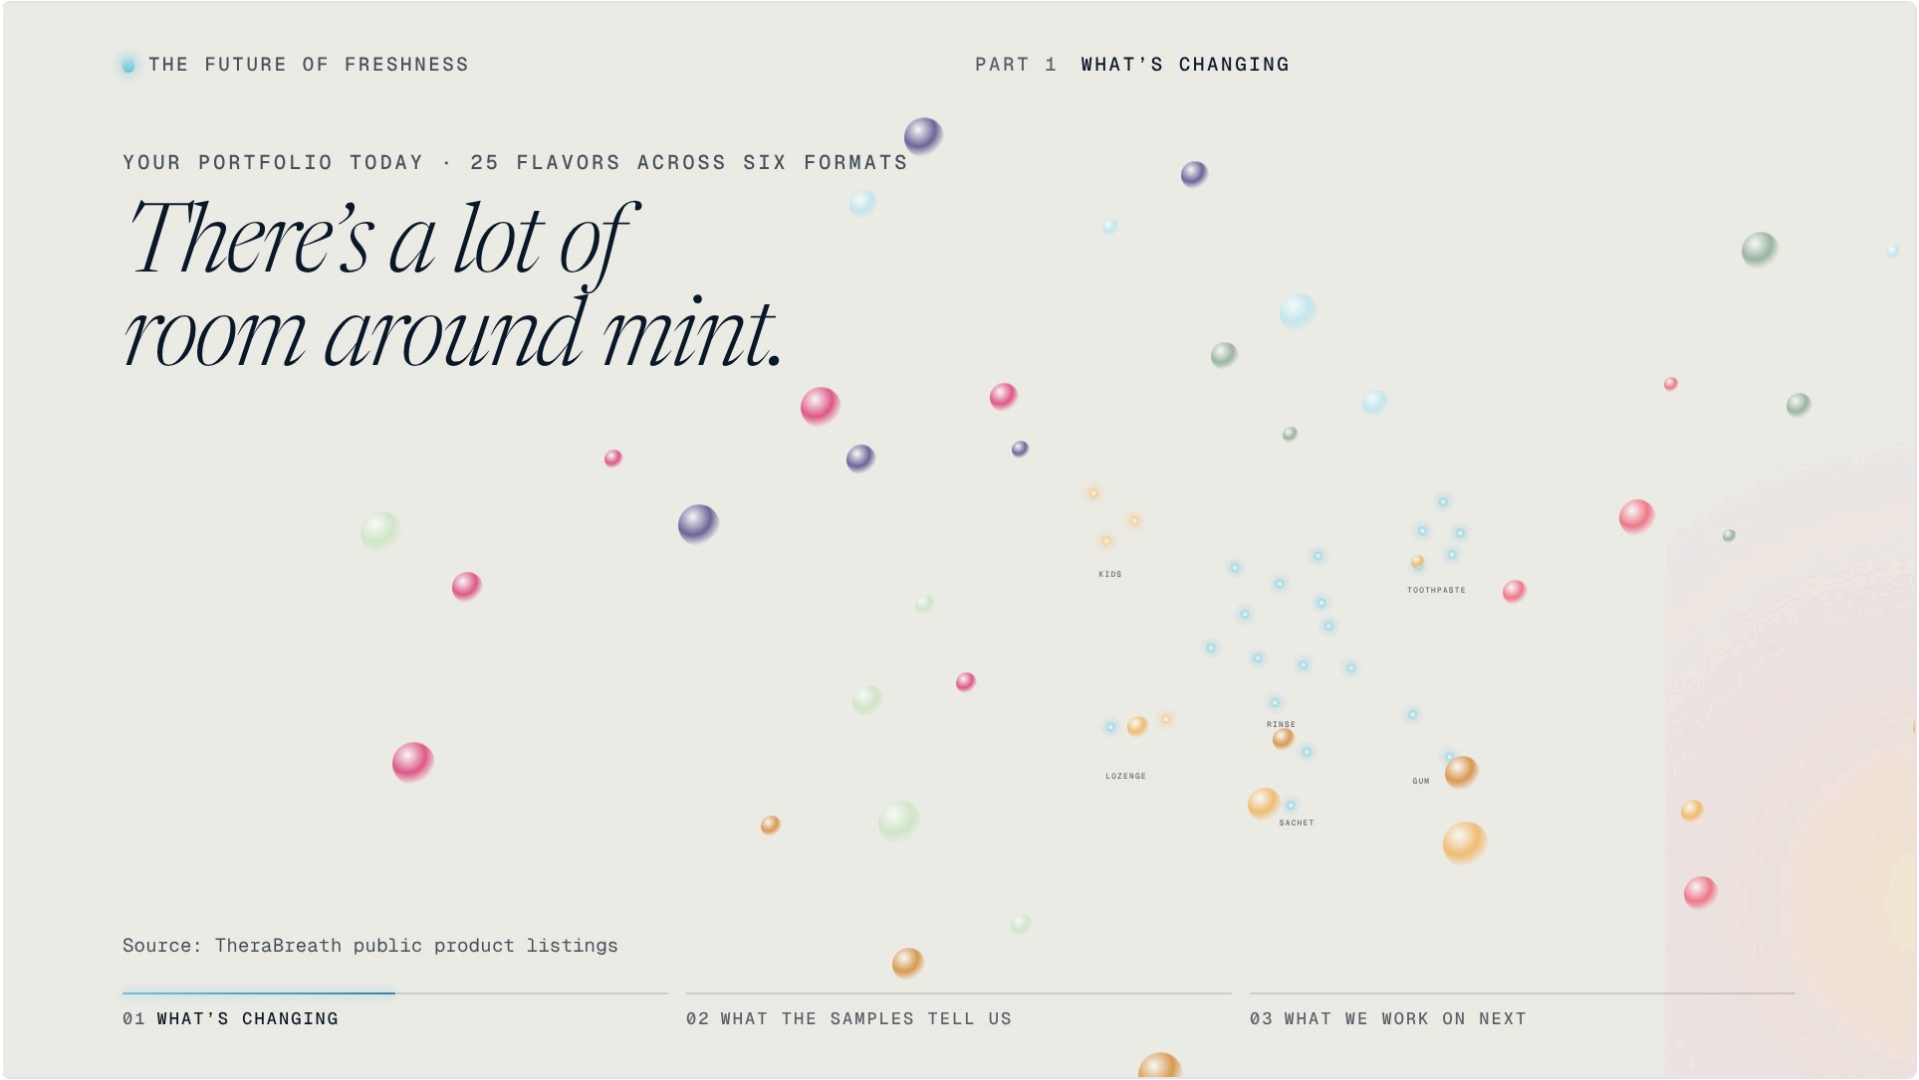

- Give this one a second to land.
- TheraBreath took the burn out of mouthwash. The next job is giving more people a reason to want it.
- This one’s optional. If we’re running late, press S to skip every optional slide, or] to jump to the next part.

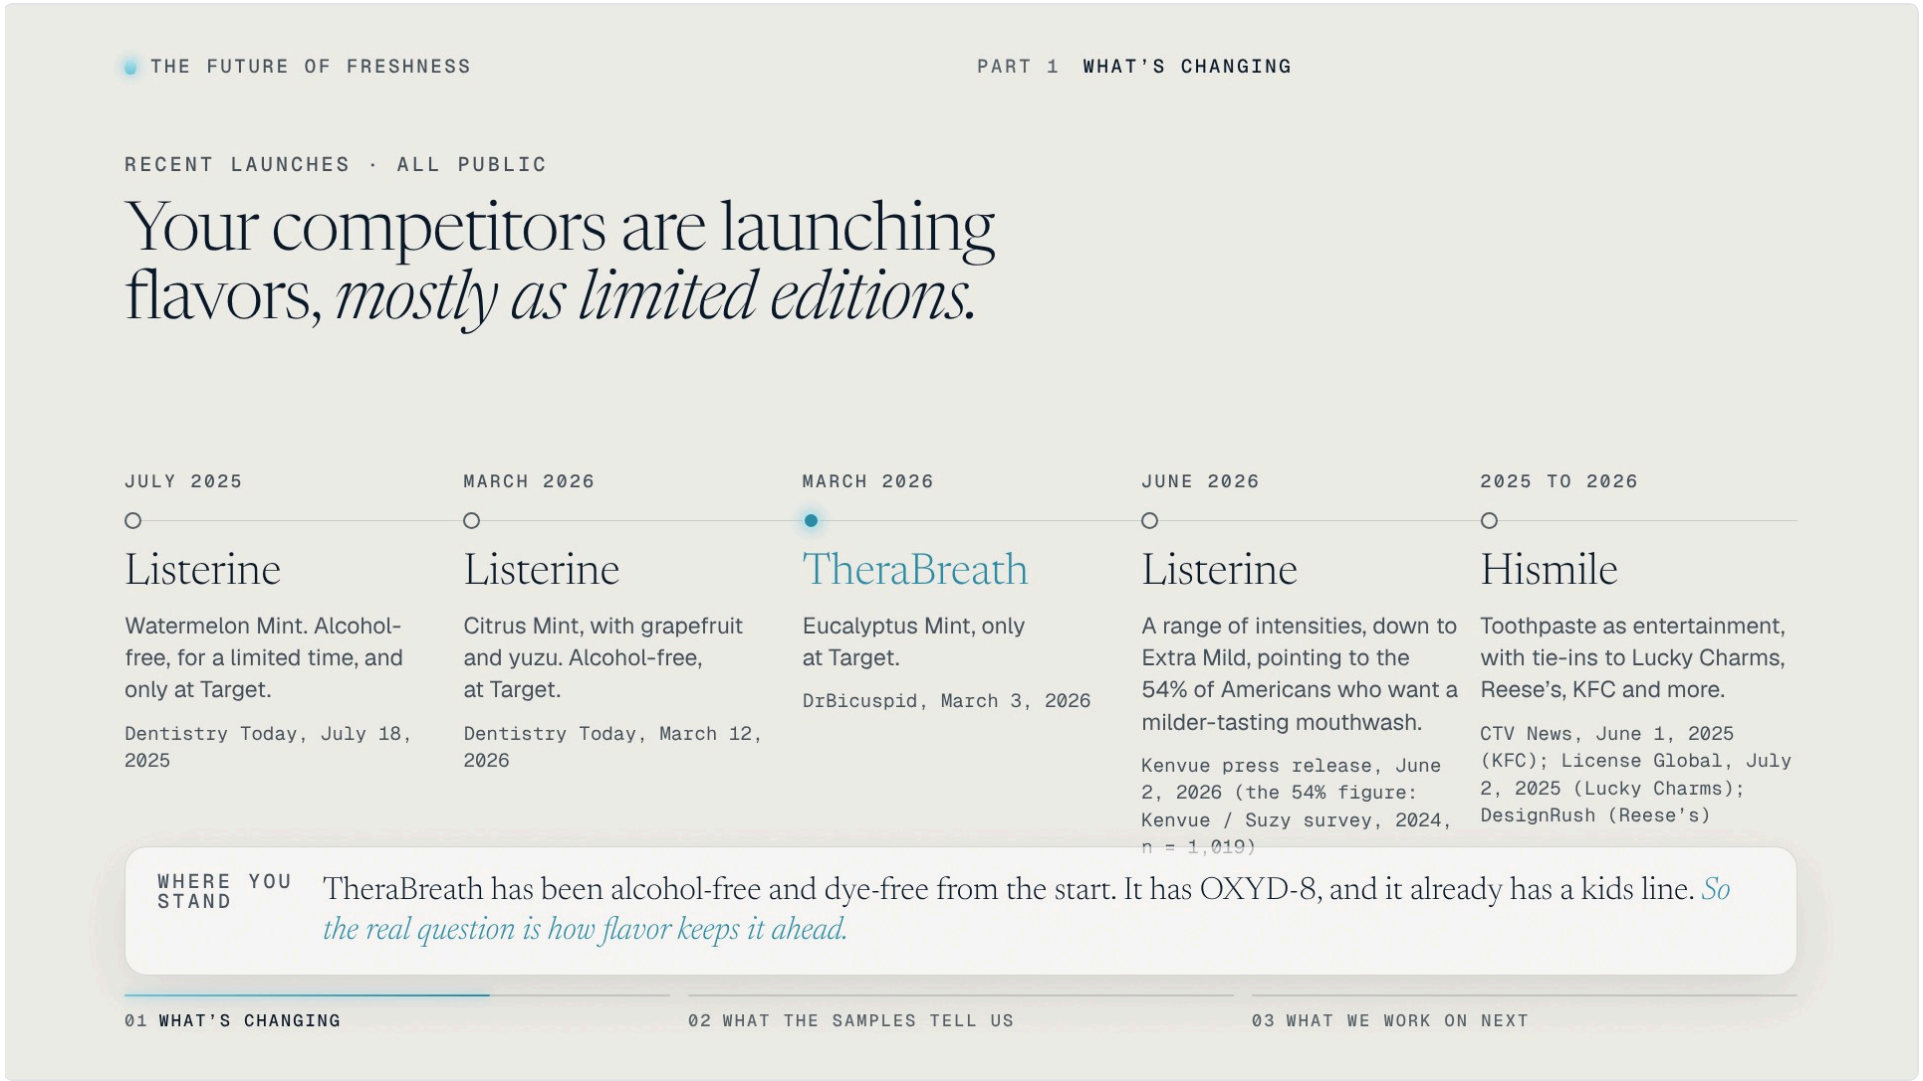

- Read Ross’s words on screen, then talk it through:
- 21 of TheraBreath’s 25 flavors are mint.
- 86 out of 100 US households don’t buy TheraBreath yet.
- Competitors are adding flavors, mostly as limited editions.
- Then three short conversations on the trends: the feel of freshness, botanicals and herbs, and fruit and playful flavors.
- And four directions on one slide. Two are in the tasting; Global Brightness and Modern Clean are ideas for discussion, with no samples today.

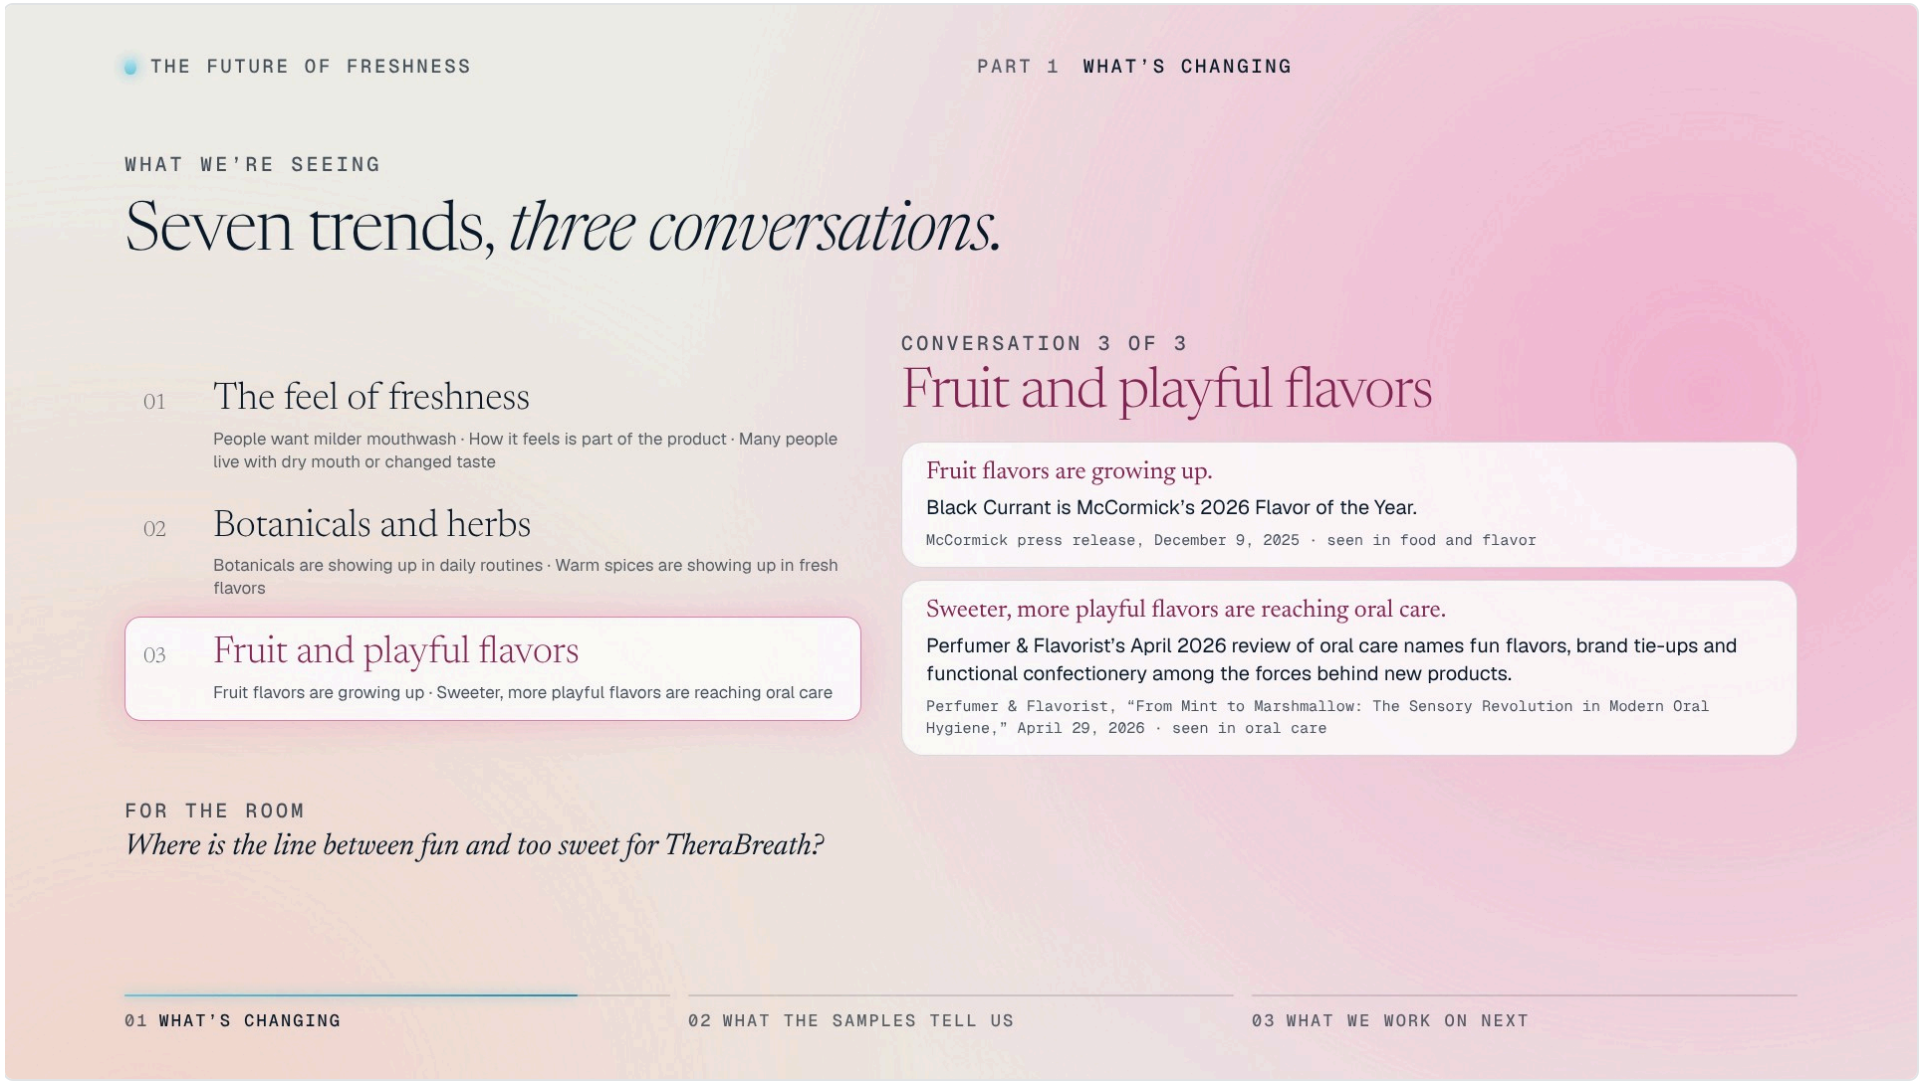

- Some quick context first: a record 26.8% of mouthwash in Q3 2026, number 2 in the category (Church & Dwight's Q3 call, October 30).
- Then let the glasses fill. 14% of households buy TheraBreath, against 65% for mouthwash, so 86 out of 100 don't buy TheraBreath yet.
- Be precise about the 86: 35 of them don't buy mouthwash at all. Ask the room which group a new flavor is for.

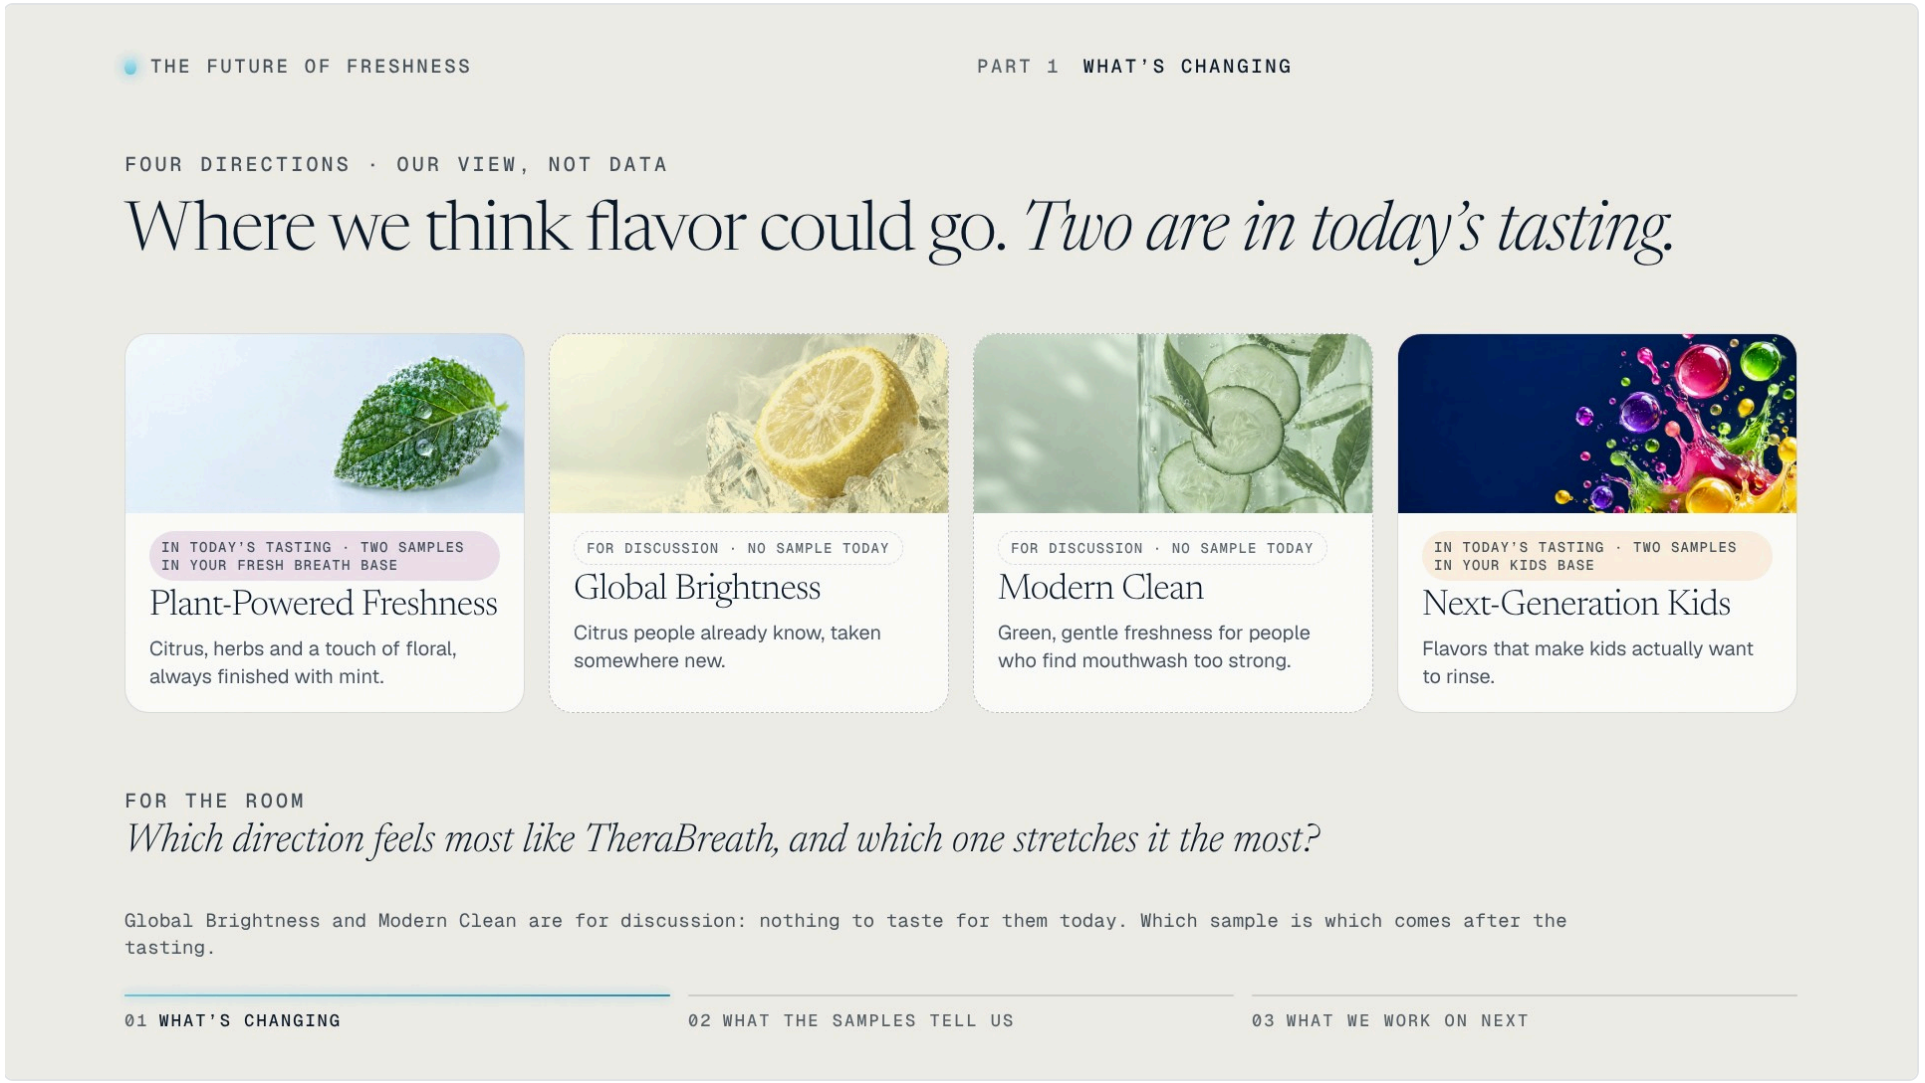

- 21 of the 25 flavors are mint, and that's a strength.
- The next build zooms out to show how much room there is around mint.
- This one's optional. If we're running late, press S to skip every optional slide, or] to jump to the next part.

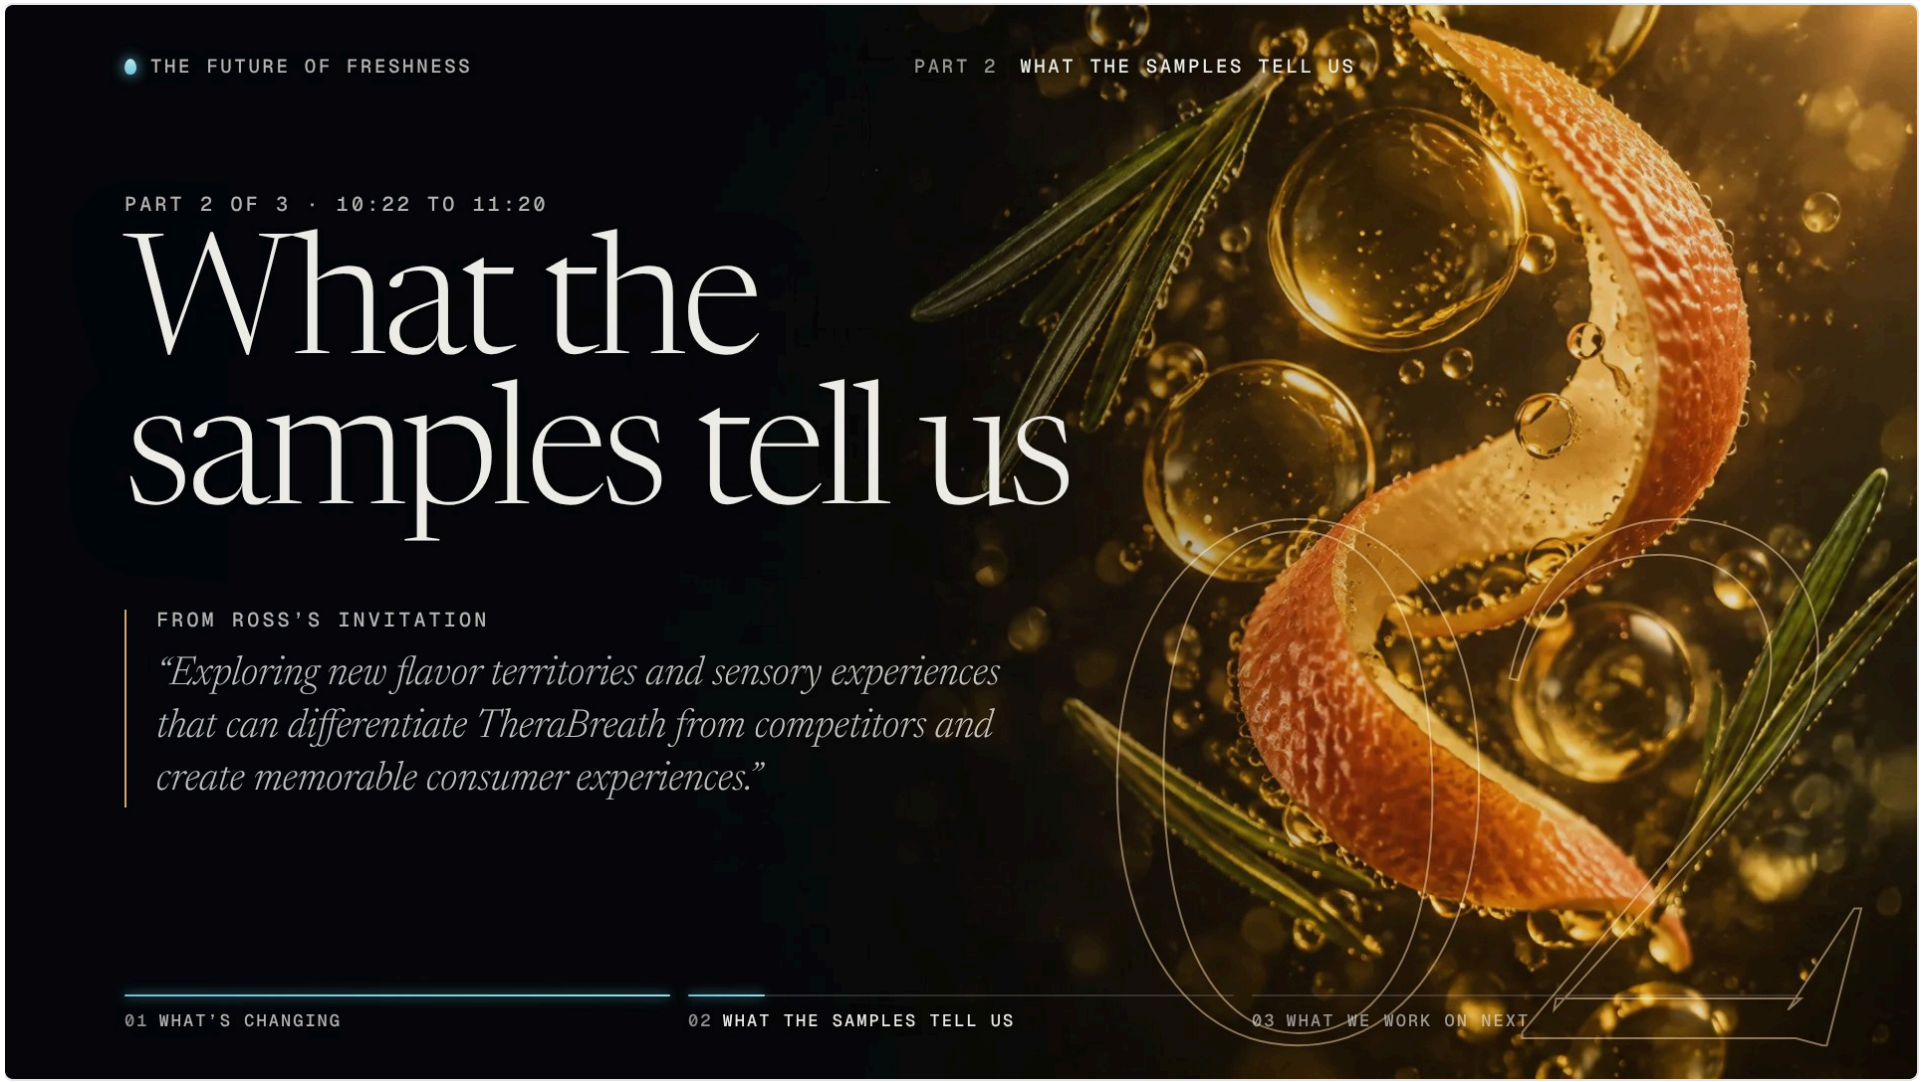

- Keep this one factual. Competitors are adding flavors, mostly as limited editions.
- On the last build, point out that TheraBreath already has what they're chasing: alcohol-free, dye-free, OXYD-8 and a kids line. Then ask what keeps it ahead.

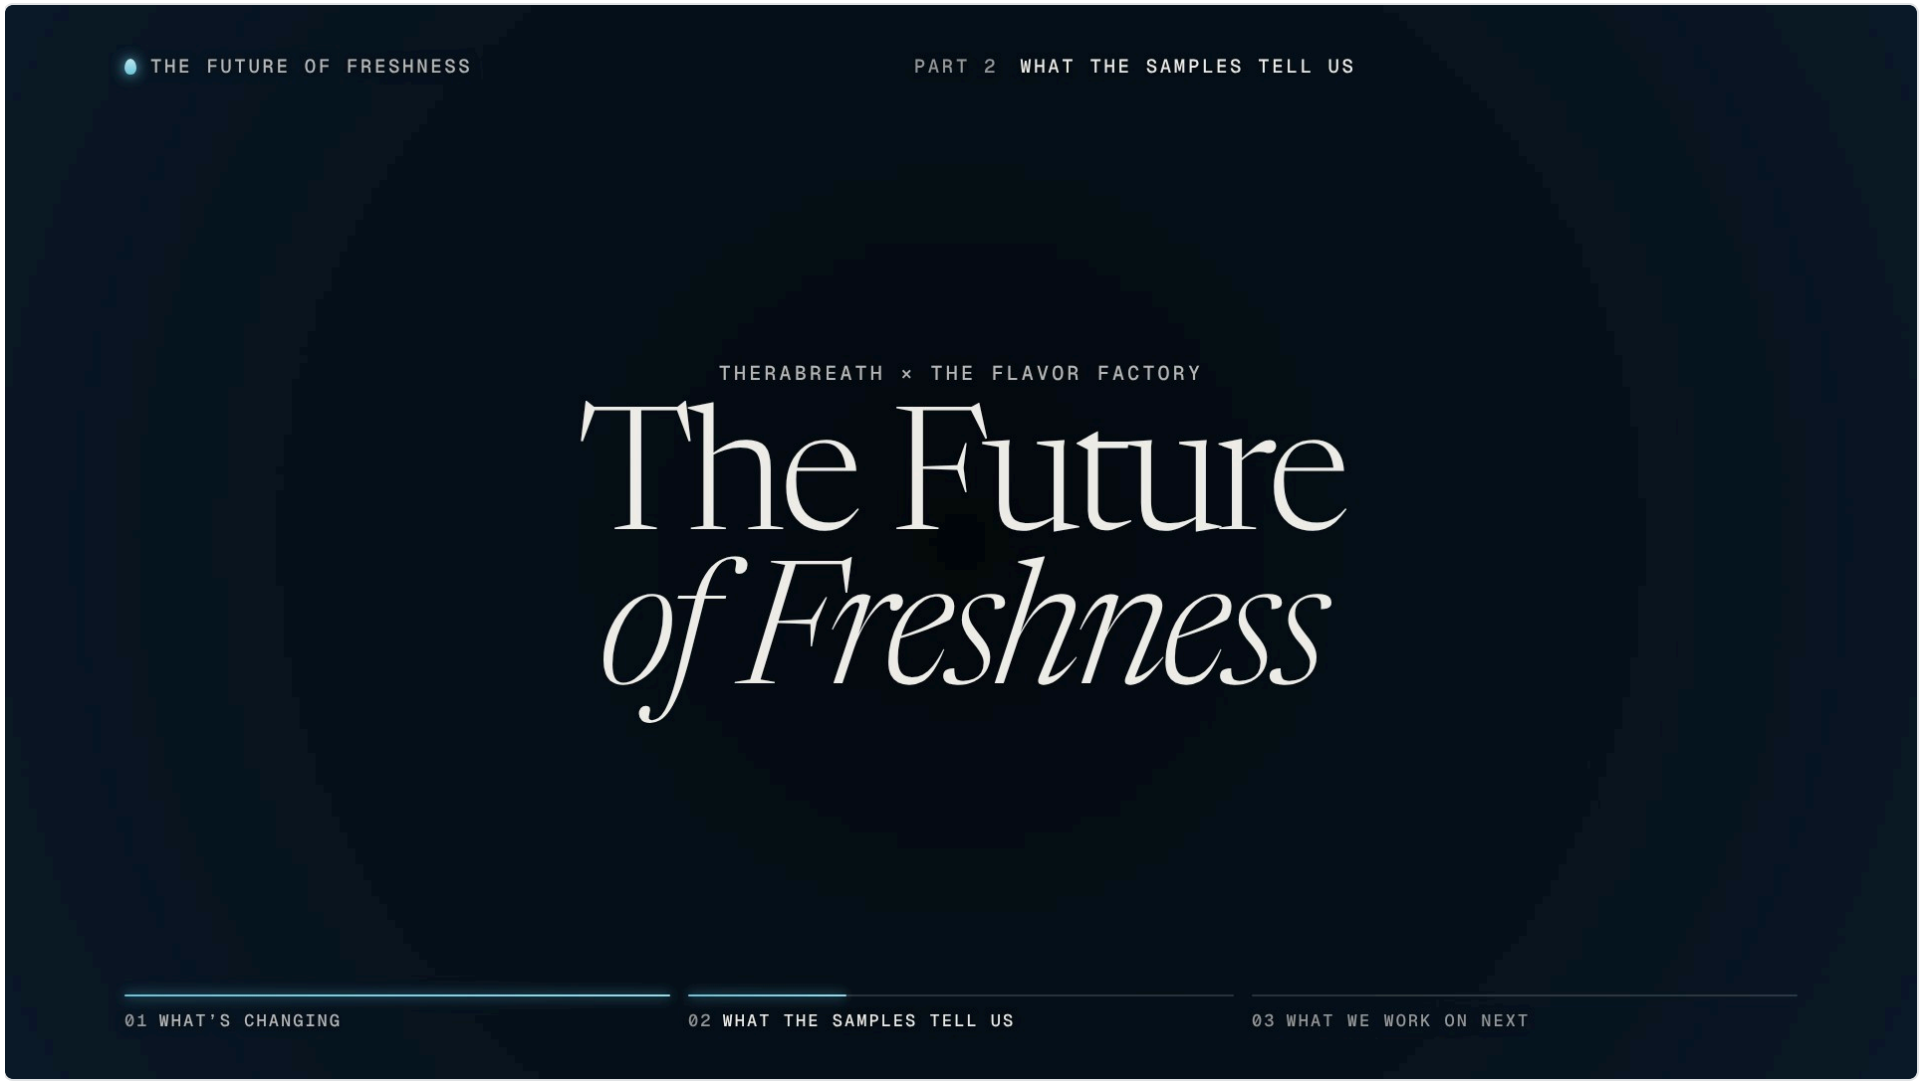

- Three short conversations instead of seven trend slides and a vote. Each click opens one: the trends it brings together, one public source each, and a question for the room.
- Aim for about a minute and a half each. The label says whether the evidence comes from oral care or from food and flavor: a food trend is a cue to discuss, not proof that people want it in a mouthwash.
- If the feel of freshness needs a second question: Is "milder" a flavor job, a cooling job, or both? Or: What would a flavor need to do to stay pleasant in
- Botanicals and herbs: Would a warm note read as fresh to a TheraBreath user, or as off-brand?
- Fruit and playful flavors: Which fruit notes could sit next to mint without reading as a kids' product?
- If someone wants to dig deeper, the seven trends and the trend vote are in the backup (Go to, in the presenter view).

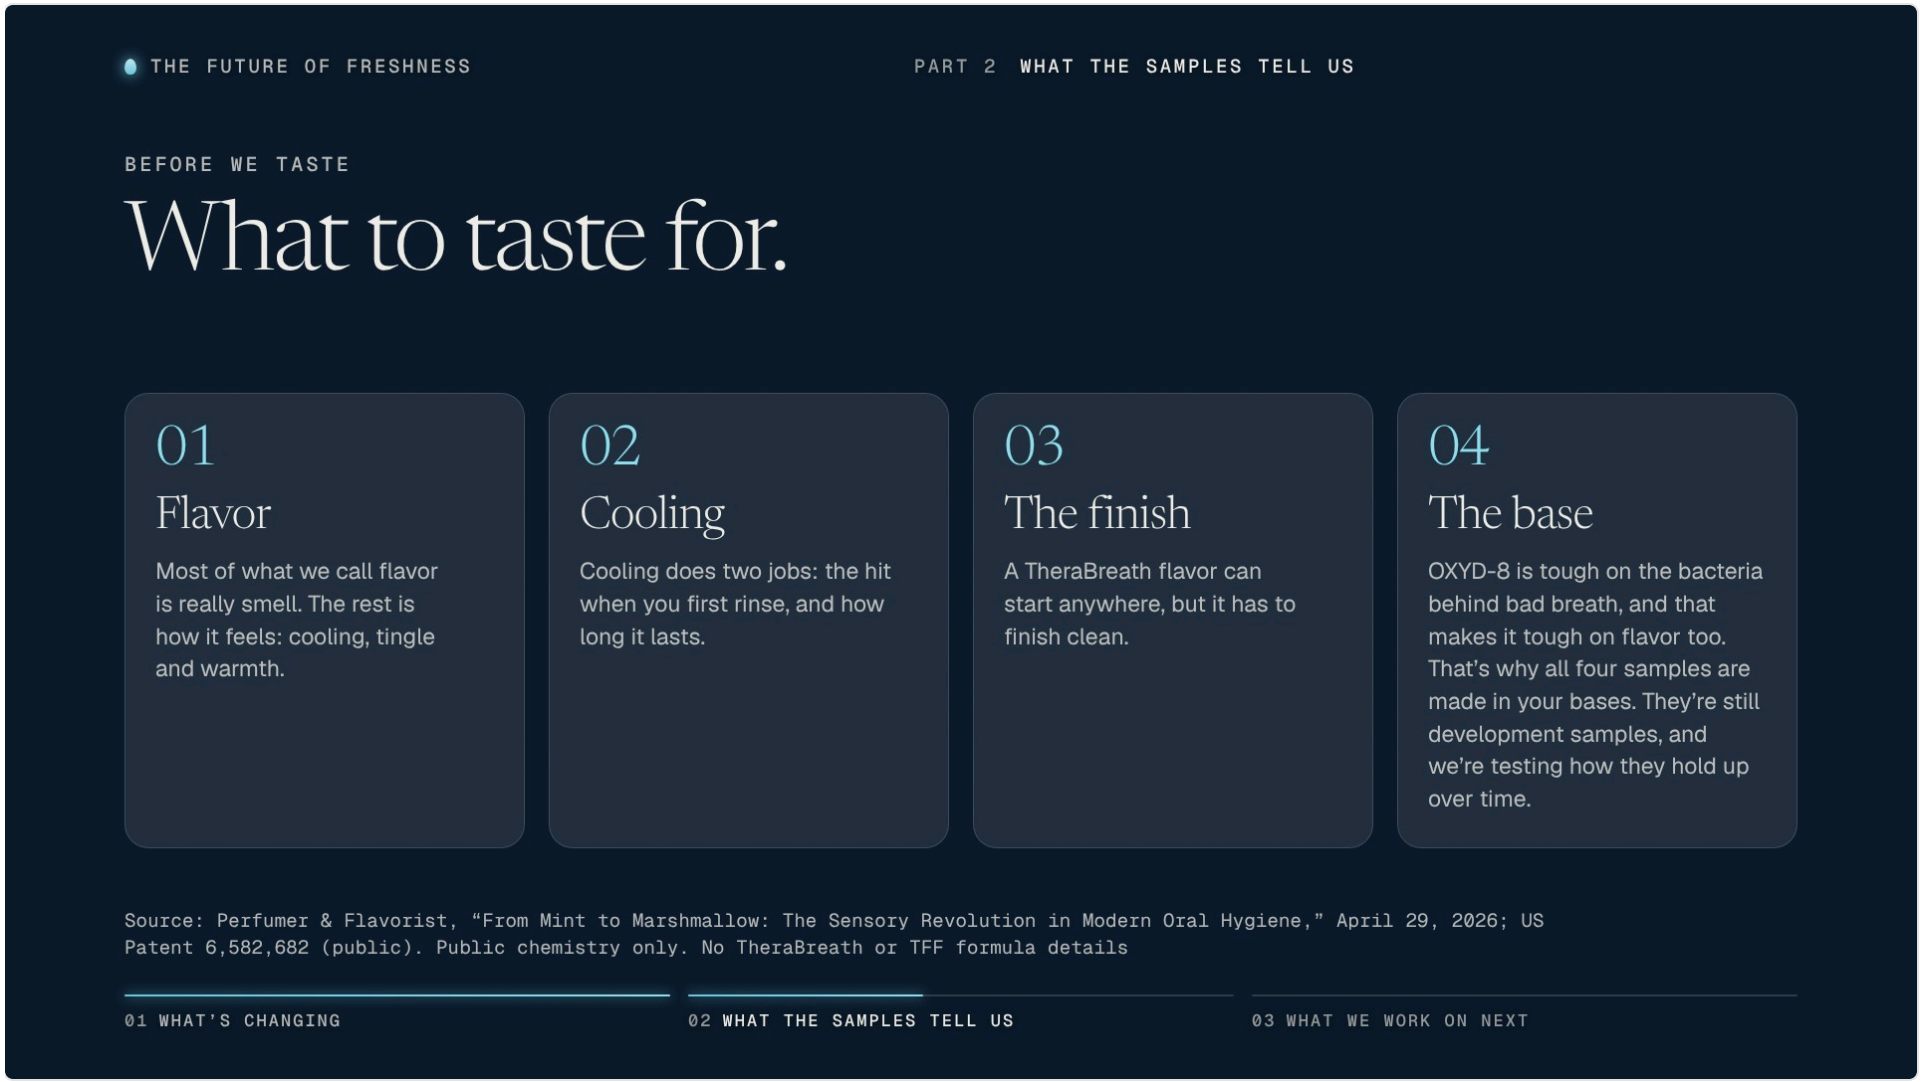

- All four directions on one slide, quickly. Two are in the tasting: Plant-Powered Freshness, in the Fresh Breath base, and Next-Generation Kids, in the Kids base.
- Be clear that Global Brightness and Modern Clean are ideas for discussion, with no samples today.
- Don't connect sample letters or names to the directions. That waits for the reveal.
- Build 1 asks which feels most like TheraBreath and which stretches it most. The map and the one-by-one direction slides are in the backup.

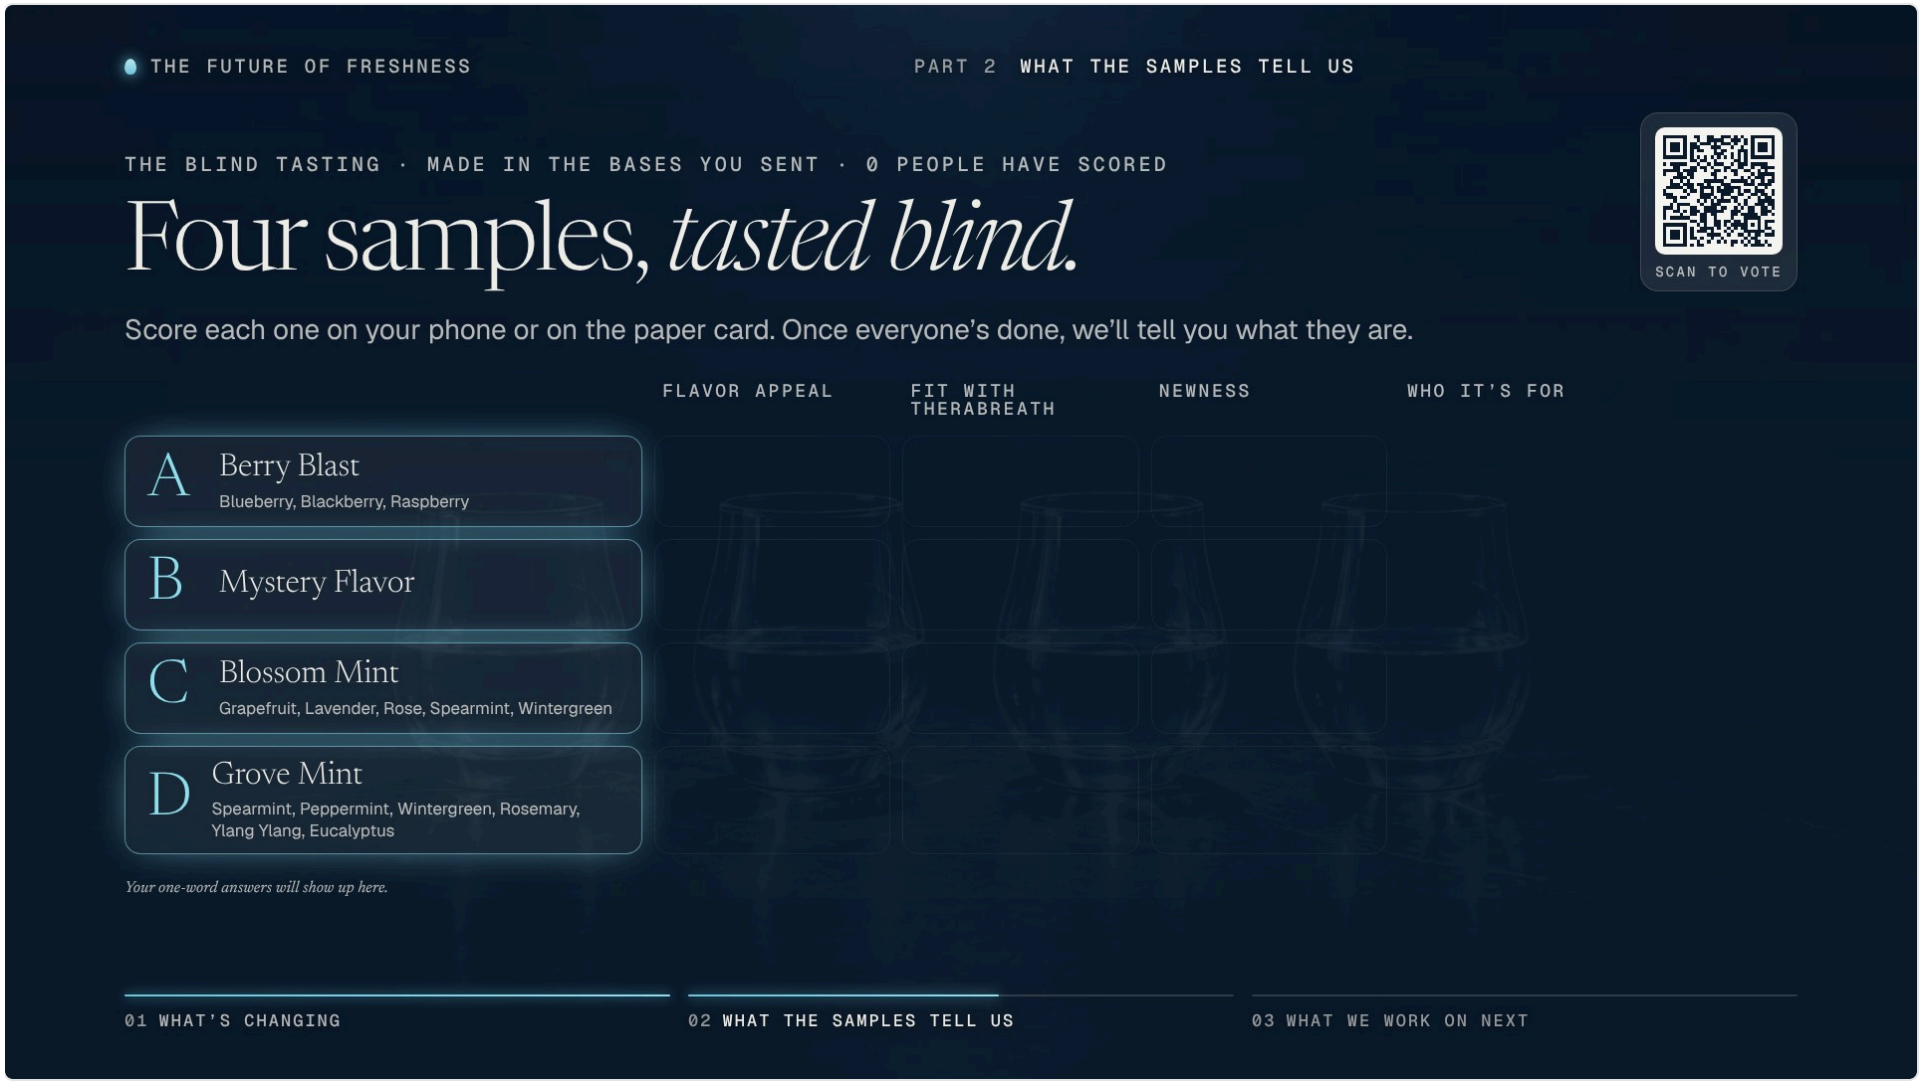

- A breath, not a speech: read Ross's words, then lights down for the film.
- A quick word on flavor, cooling, the finish and the base, then four samples, all made in your Fresh Breath and Kids bases.
- Everyone scores all four before the names go up. Then: what stood out, and what would you keep or change?
- Five chips each on what gets a next round, unless the room already agrees.

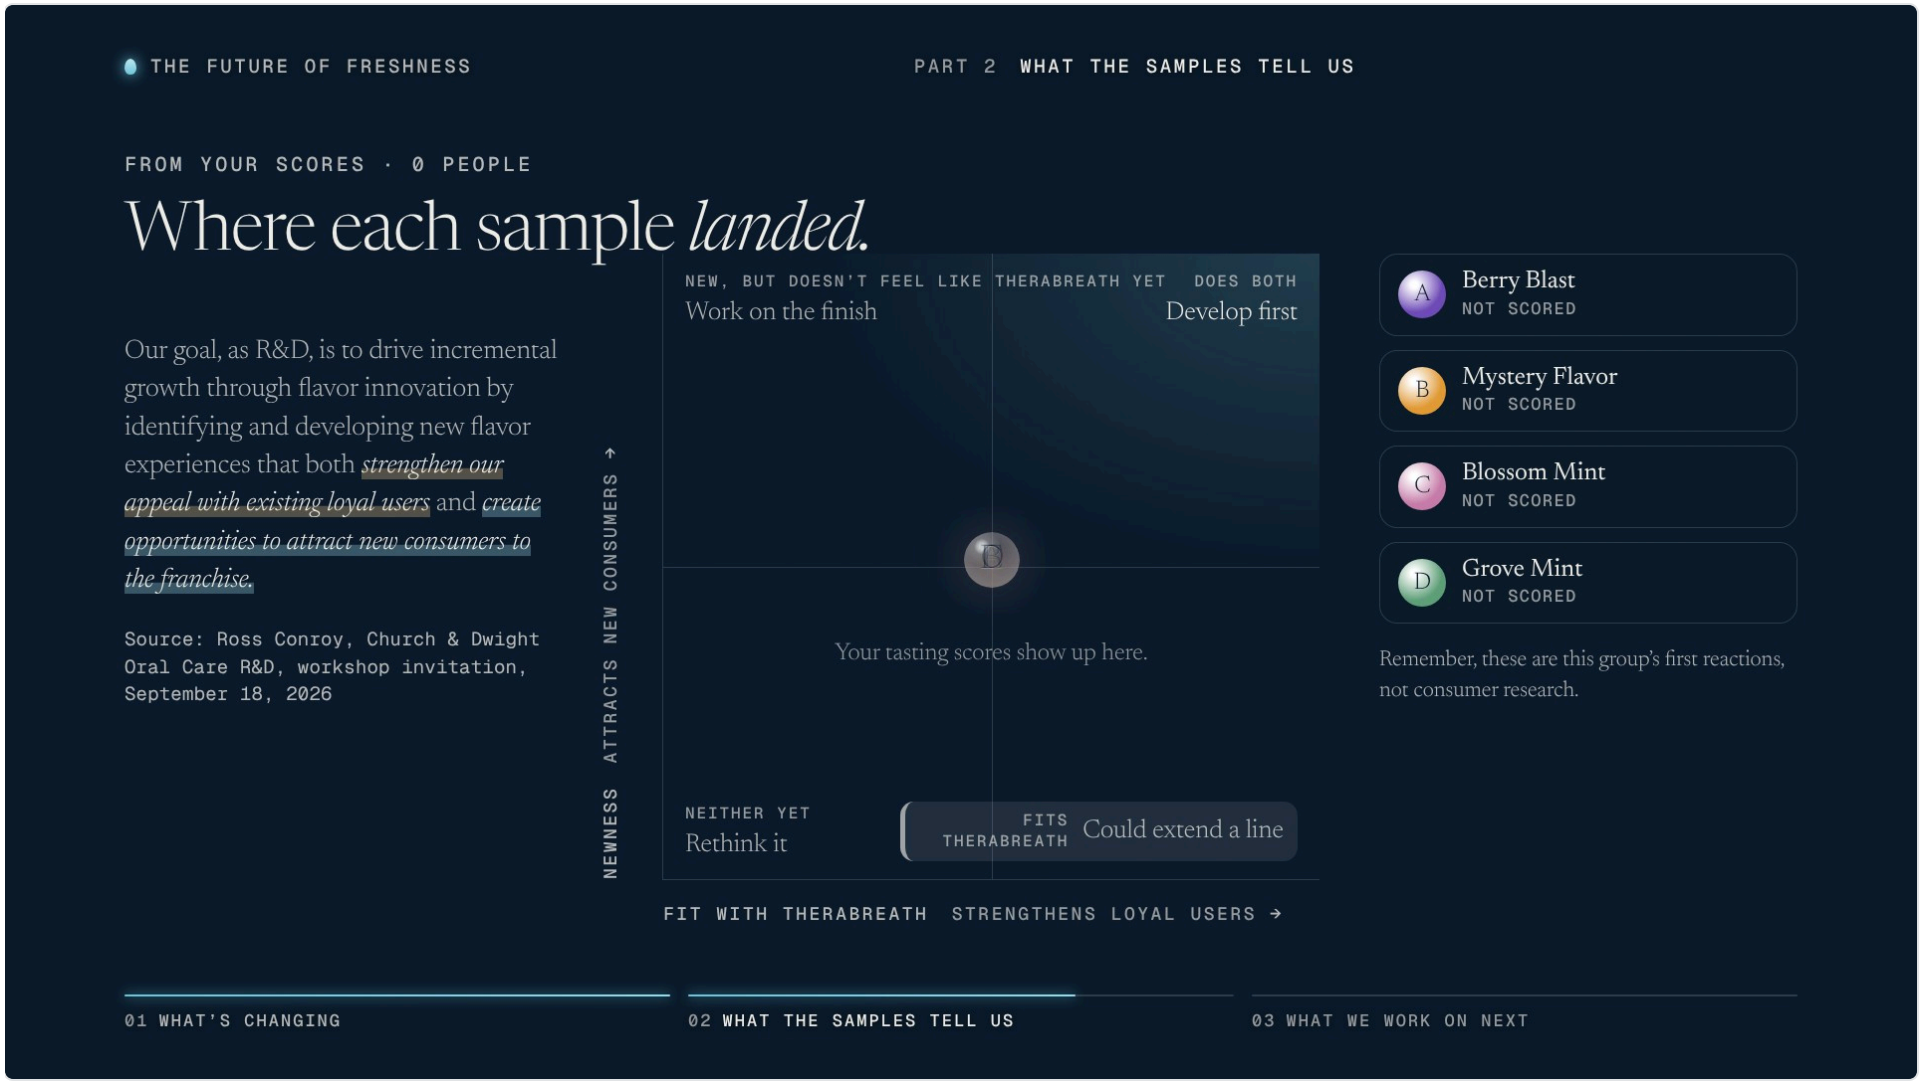

- At 10:22, right after Part 2 opens, lights down and sound up. THE FLAVOR RACE runs 2:24. Don't announce it.
- Its flavor montage shows the flight's own fruits, the Mystery Flavor's among them, so the guesses won't be fully blind. Treat it as a hint and let the room have fun with it.
- Space or K pauses and plays, and R starts it again. The presenter view has the same buttons and the film's clock.
- Don't talk over it. When it ends, the closing card stays up: lights up, bring out the samples, and Next goes to What to taste for while they're poured. Running late? Skip it: the right arrow or] goes straight on.

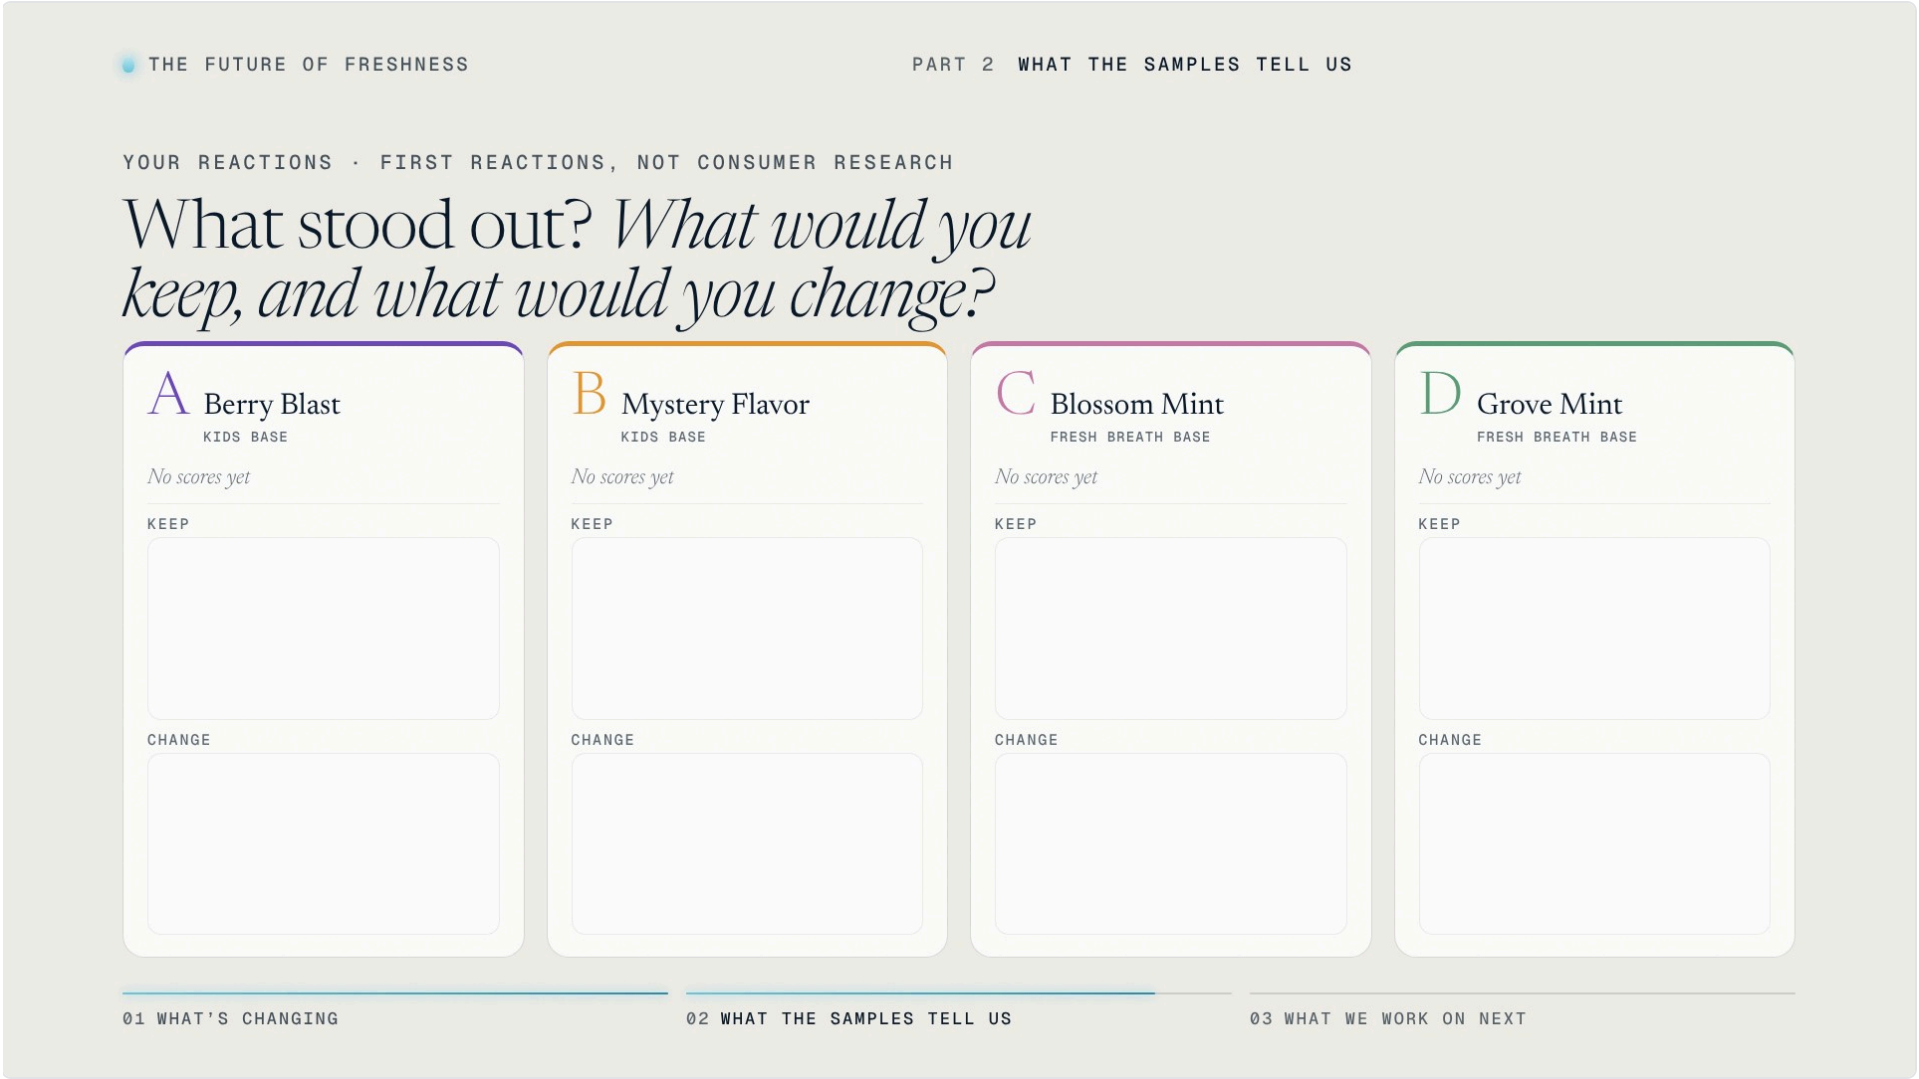

- While the samples are poured: the short version of Flavor School, one click per point.
- Flavor is mostly smell, plus how it feels. Cooling has two jobs. A TheraBreath flavor has to finish clean. And the base matters: OXYD-8 is tough on flavor, which is why everything is made in their bases.
- Stick to public chemistry. No formula details.
- The detailed Flavor School slides are in the backup, for R&D questions.

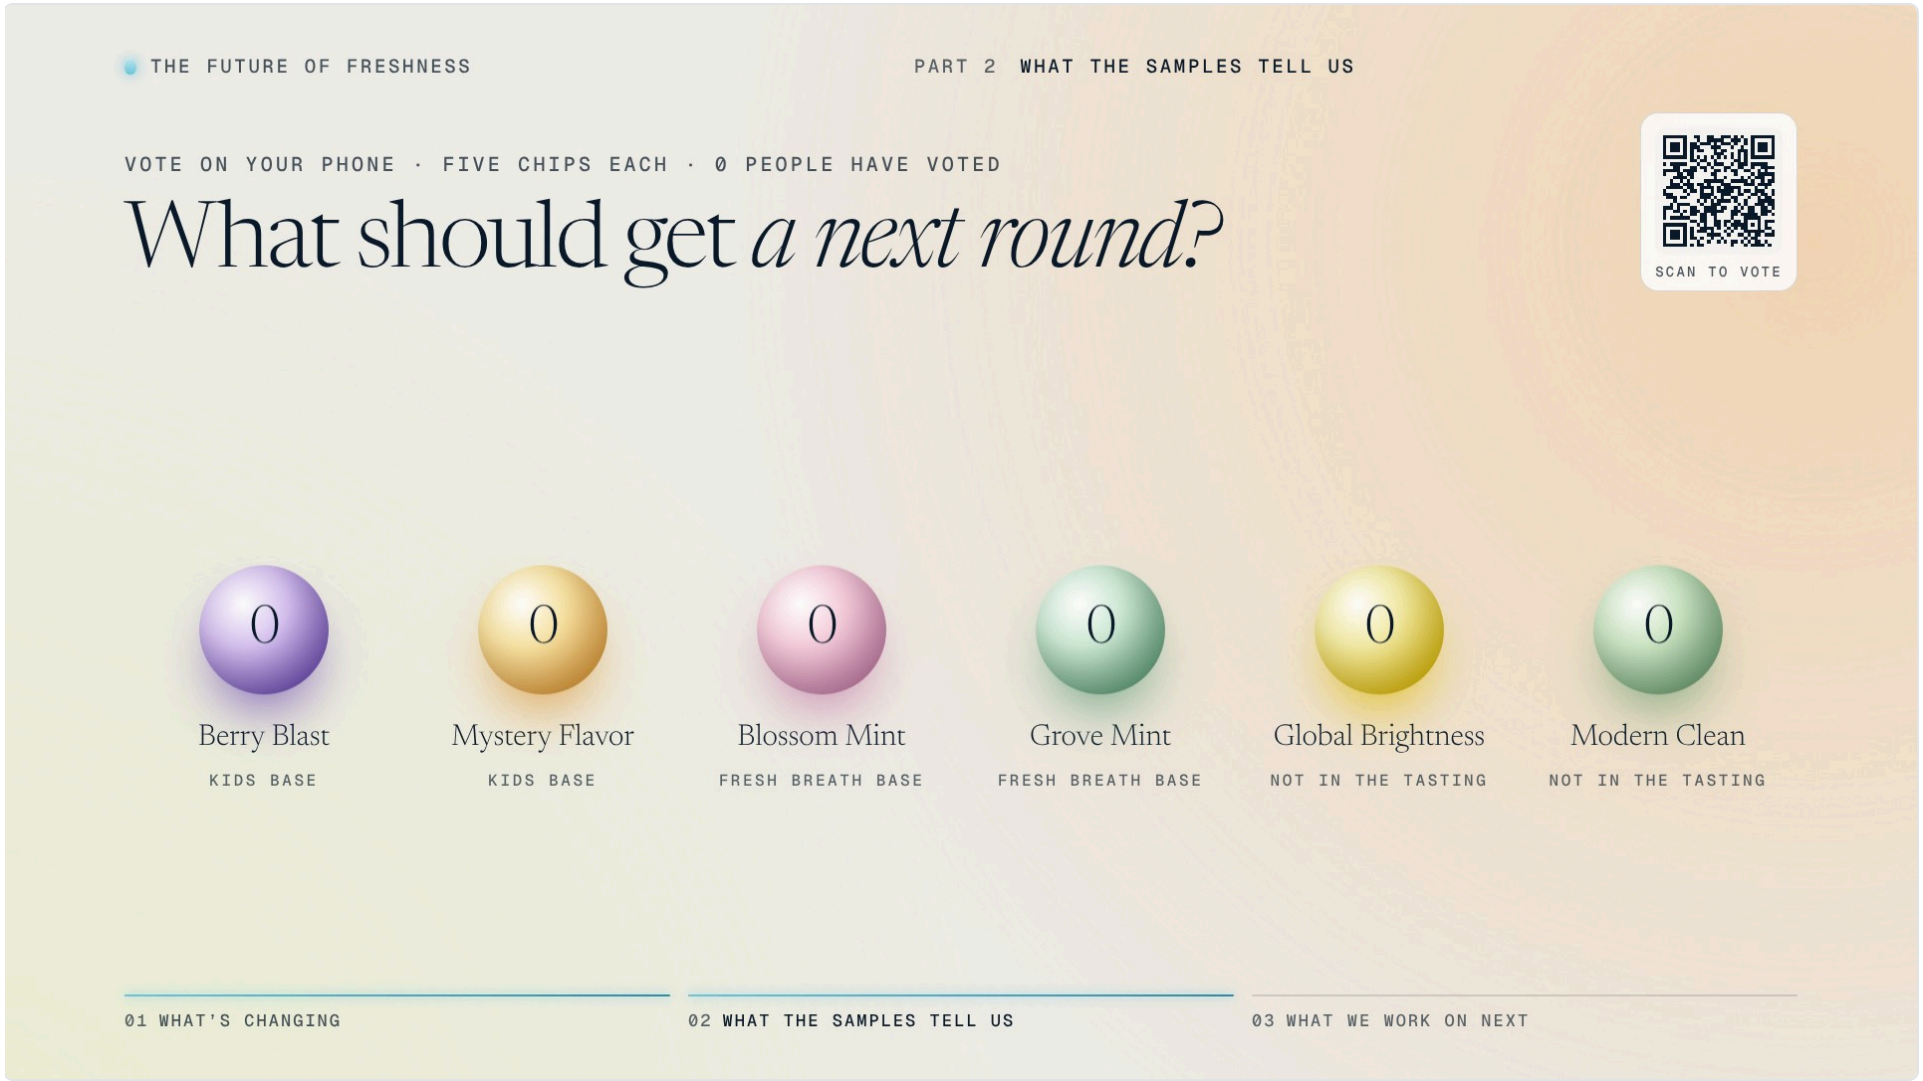

- Phones out, or paper cards. For each sample, everyone completes the three scores: flavor appeal, fit with TheraBreath and newness. The other questions are optional.
- A and B are in the Kids base, and C and D are in the Fresh Breath base. We start with the Kids samples.
- B is the Mystery Flavor. Anyone who wants to can write down the fruits they get.
- Everyone scores all four before the names go up. Type the paper cards into the presenter view as they come in, or collect them to type in later.
- Leave time for water and a pause between samples. 35 minutes is the target, but the size of the group and the discussion set the pace.
- Build 1 shows their words and fruit guesses, and build 2 reveals the names.

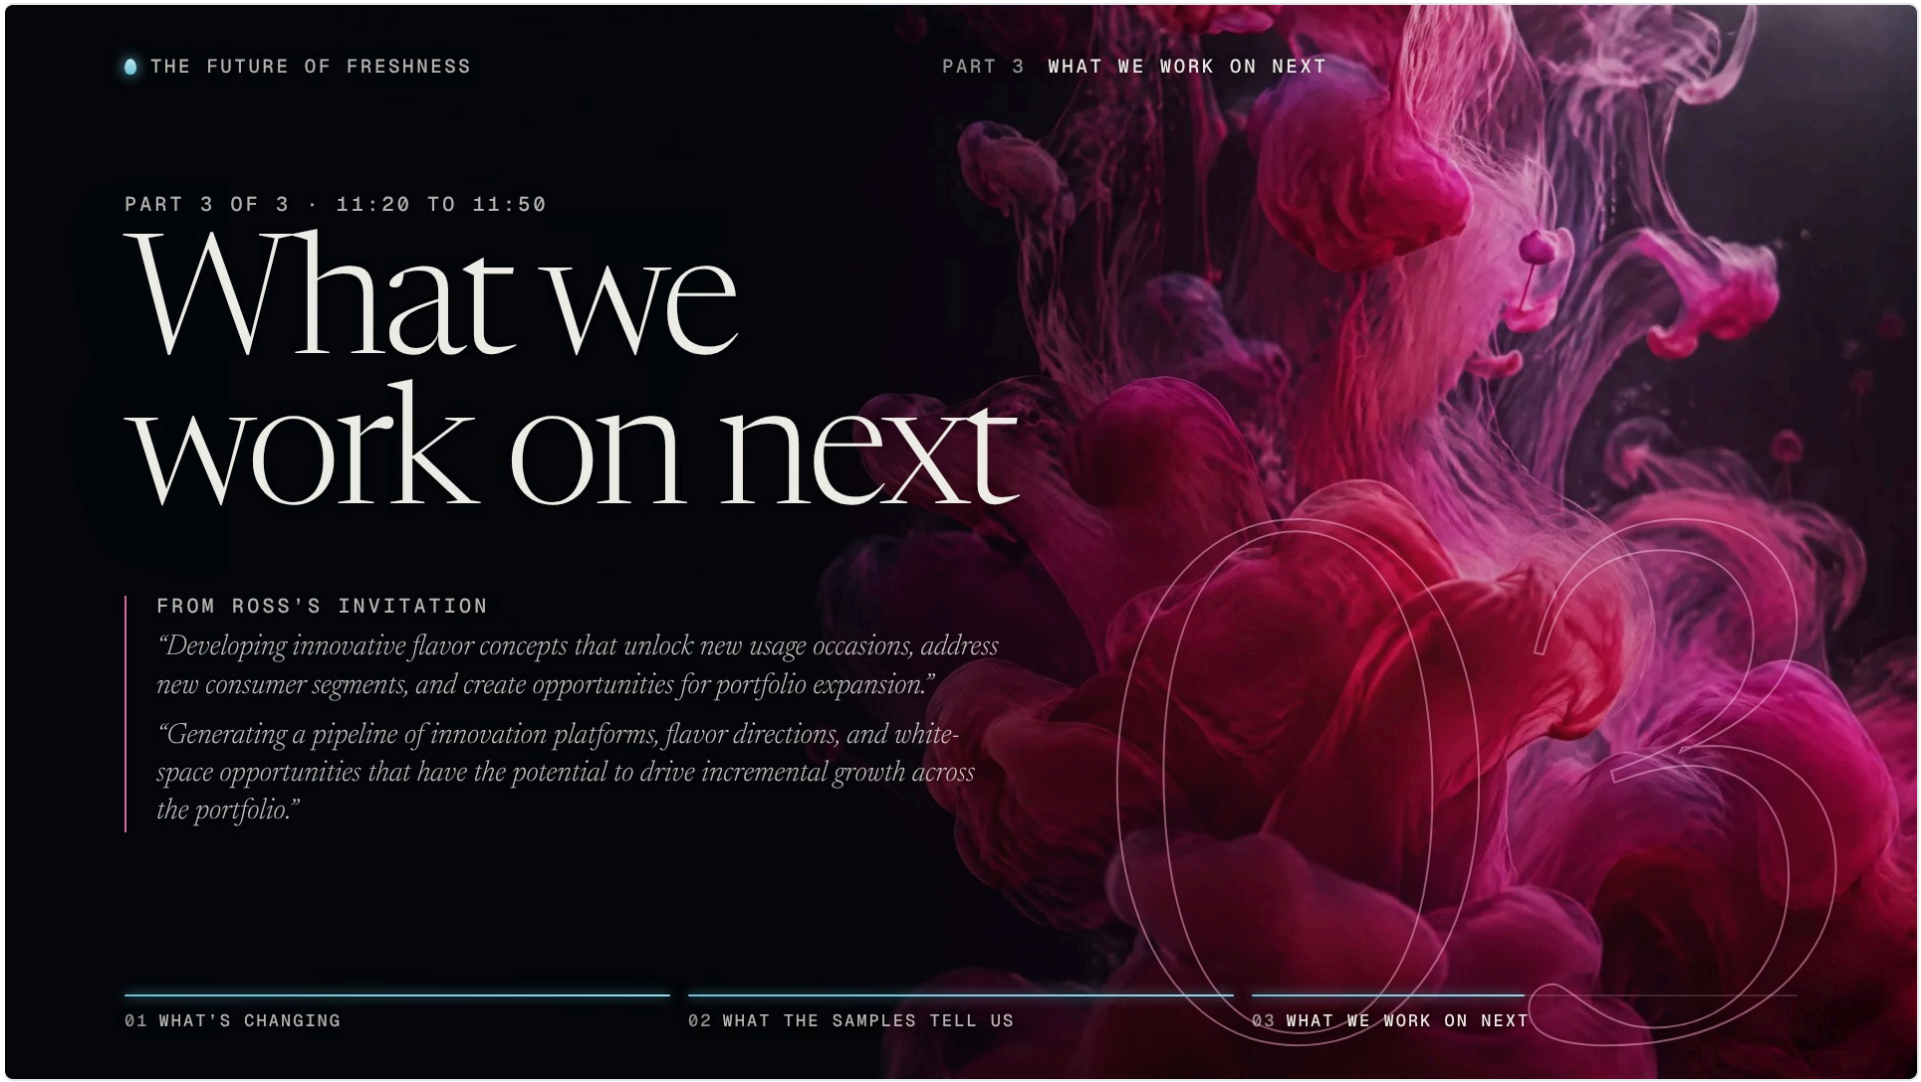

- This chart comes straight from their scores. Across is feels like TheraBreath (loyal users), up is newness (new consumers), and the size of each bubble is appeal.
- Top right is what Ross asked for: both at once. These are first reactions, not consumer research.

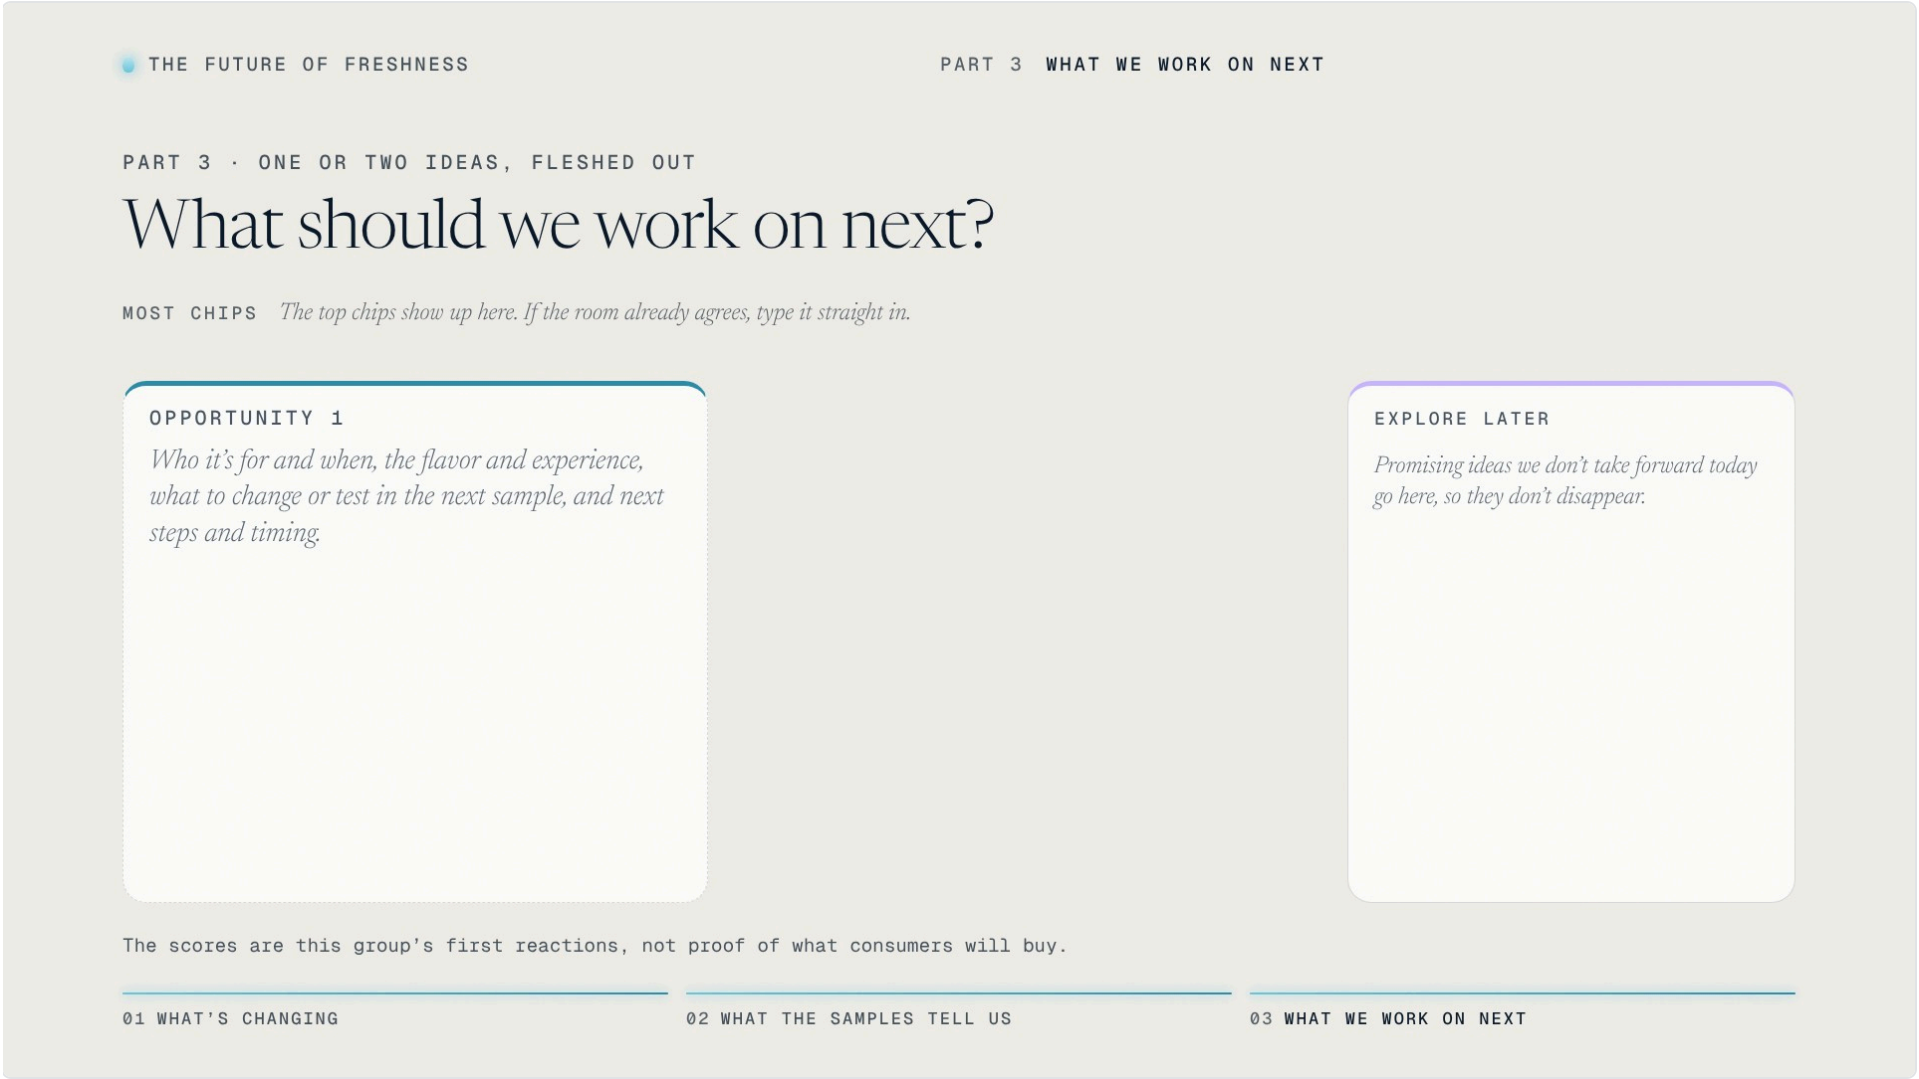

- Ask: What stood out? What would you keep, and what would you change?
- Go sample by sample and type what they say under Keep and Change. It saves to the session, and the read-back and the write-up show it.
- Paper cards can still go in from the presenter view.

- Five chips each, across the four samples and the two directions we didn't taste. Stacking is fine.
- Add chips by hand in the presenter view for anyone without a phone.
- If the room has already reached a clear agreement in the discussion, skip the vote and capture that on the next slide instead.
- Build 1 shows the top three.

- Read Ross's words on screen, then talk it through:
- Take the one or two strongest opportunities from the vote and the discussion.
- For each: who it's for and when they'd use it, the flavor and experience, what to change or test in the next sample, and the next steps and timing, if both teams can agree.
- Everything else that's promising goes on an explore-later list, so it doesn't disappear.
- The scores are this group's reactions, not proof of what consumers will buy.

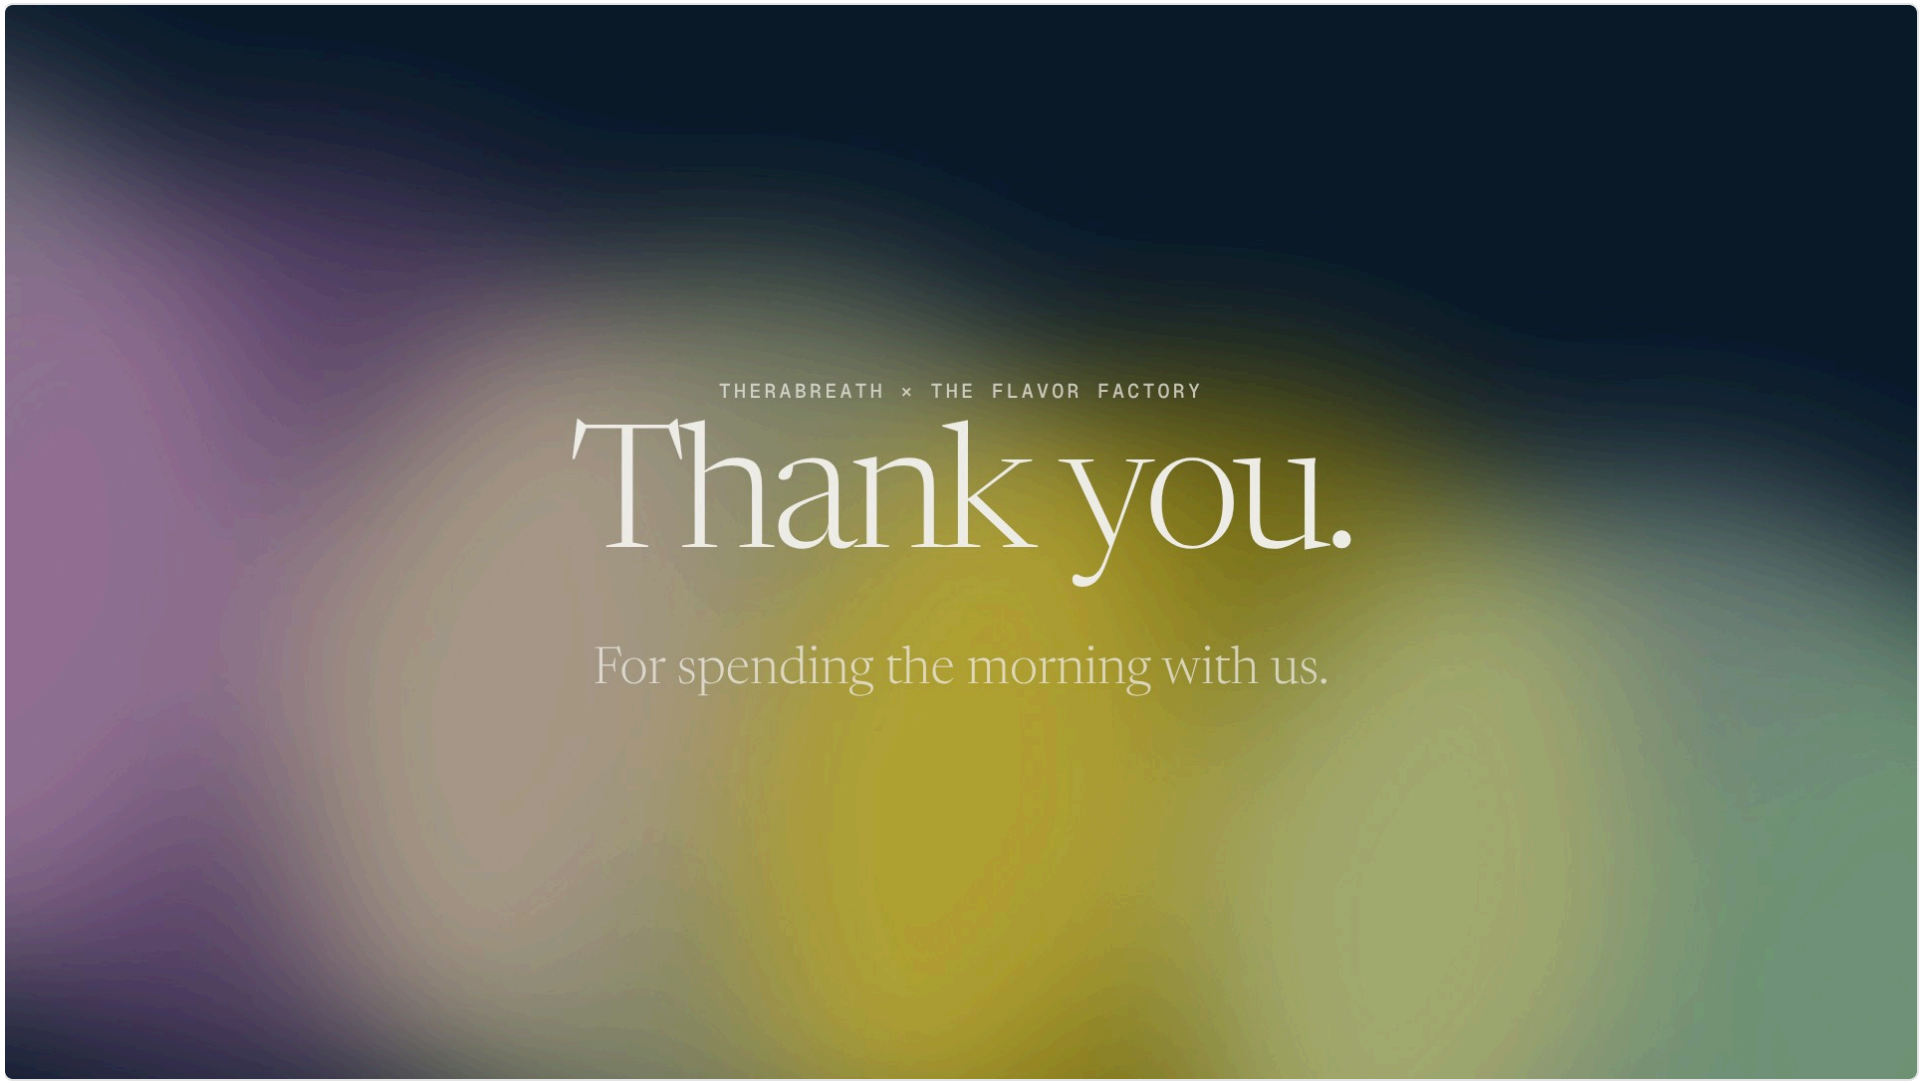

- Take the one or two strongest opportunities. Click a name in the tray to start one, or Later to park it. If the room already agreed in the discussion, type it straight in.
- For each one, capture: Who might it be for, and when might they use it? What should the flavor and experience be like? What needs to change or be tested in the next sample? What are the next steps and timing, if both teams can agree?
- Anything else promising goes on Explore later, so it doesn't disappear.
- Say it out loud: the scores are this group's reactions, not proof of what consumers will buy.
- If the room is stuck, offer one of the two example ideas on the run sheet. Owners and the base can go in from the presenter view, if both sides want them.

- Read the plan back and make sure everyone agrees.
- Builds 1 to 4 open one chapter each at full size: the tasting with what they'd keep and change, the chips, the one or two ideas with their next steps and timing, and the explore-later list.
- The last build closes it into the cover. The write-up comes within 8 business days.

- Walk through the three next steps. The dates still need confirming before November 9.
- Then thank everyone for their time.

- Ten minutes of buffer: questions, more discussion, or anything that ran long. Then lunch, hosted by Church & Dwight.
- If there's time and interest, the backup slides are ready: Go to, in the presenter view.

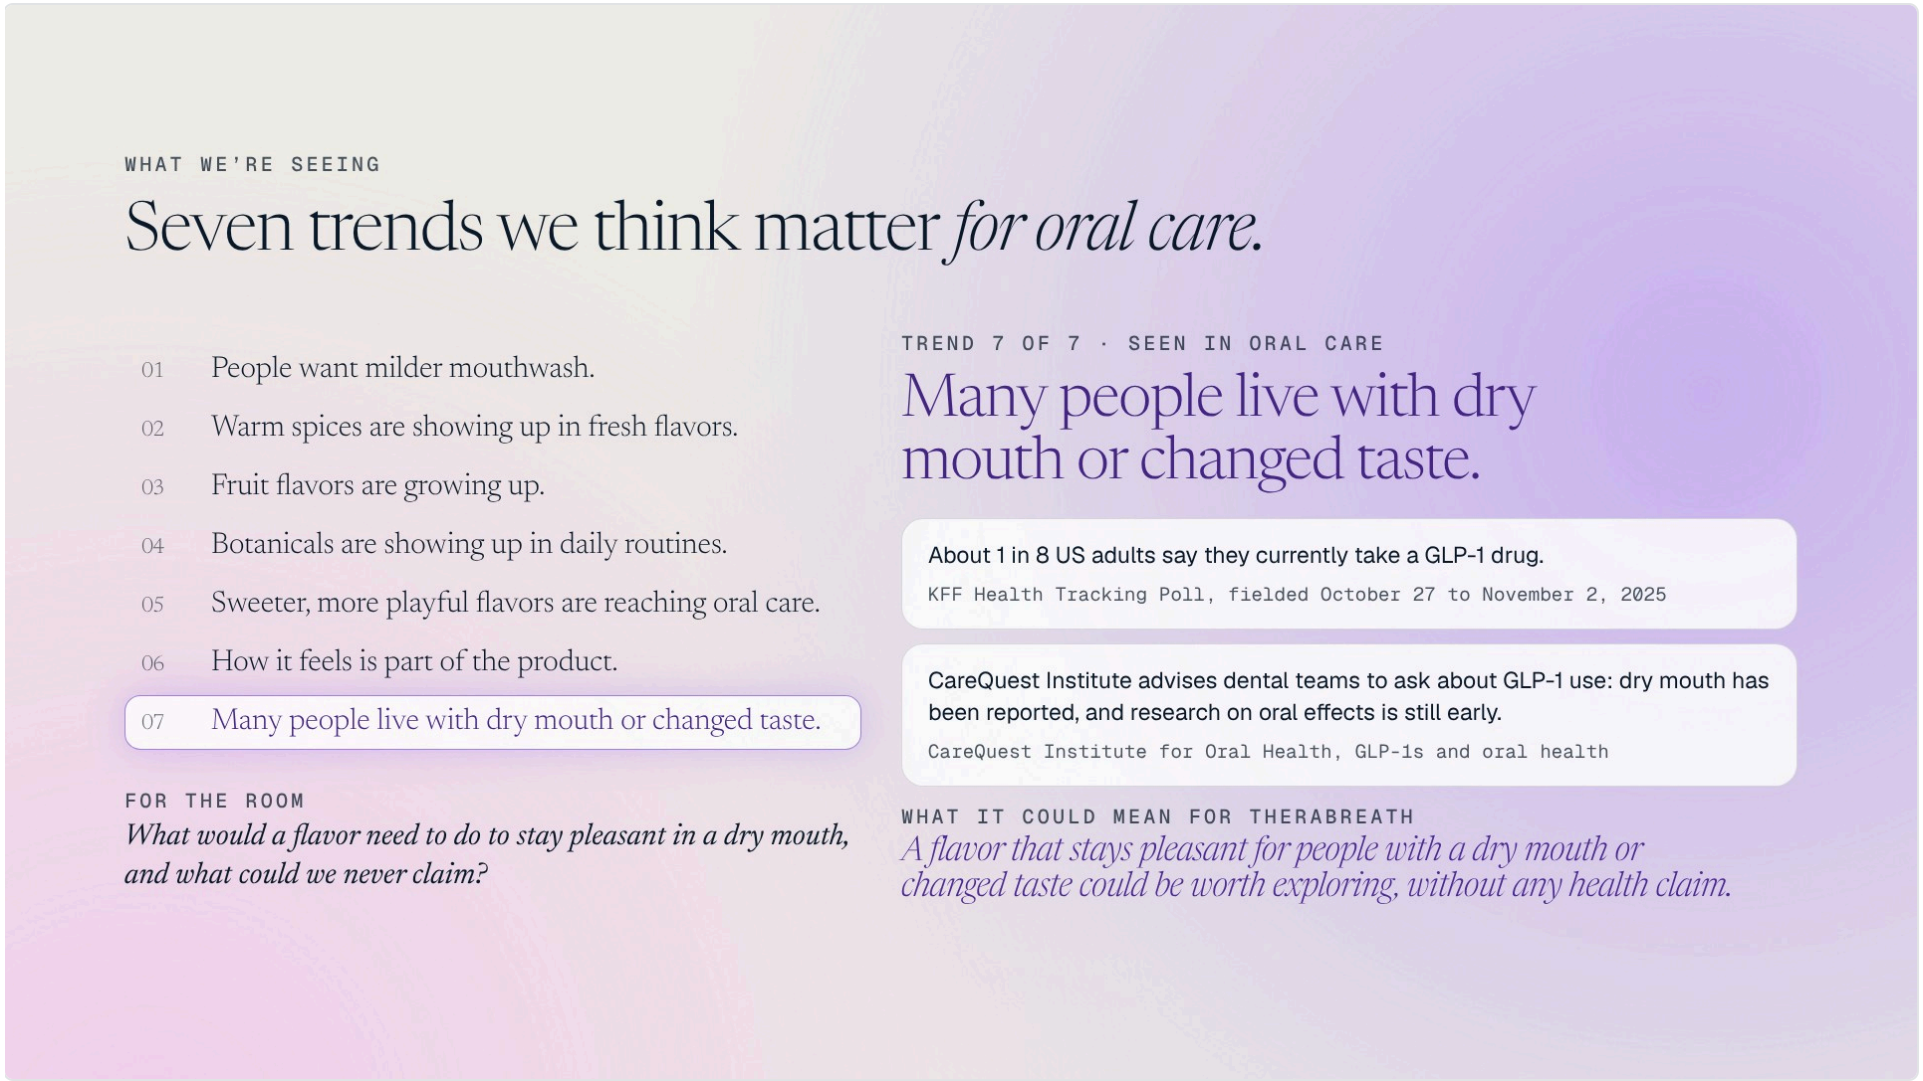

BACKUP SLIDES

Ready *if asked*

Out of the main flow: the seven trends and the trend vote, Flavor School, the directions one by one, and the longer activities. Open one from the presenter view's Go to list; Return (or Escape on the TV) comes back to where the morning left off.

- When they came to Norco in July, we talked about resiliency, innovation, operations and partnership.
- Today is about growth.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

- Each click brings up one trend: the headline, its sources, what we think it could mean for TheraBreath and a question for the room. The label says whether the evidence comes from oral care itself or from food and flavor more widely: a food trend is a cue to discuss, not proof that people want it in a mouthwash.
- No need to read every source out loud. Aim for about forty seconds each.
- Ask which one surprised them most.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

- Phones out. Everyone picks three.
- Watch the bars fill. If someone doesn't have a phone, add their vote by hand in the presenter view.
- Build 1 shows the top three, and the results page and write-up list them.
- Build 2 asks: What are you seeing that we missed?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

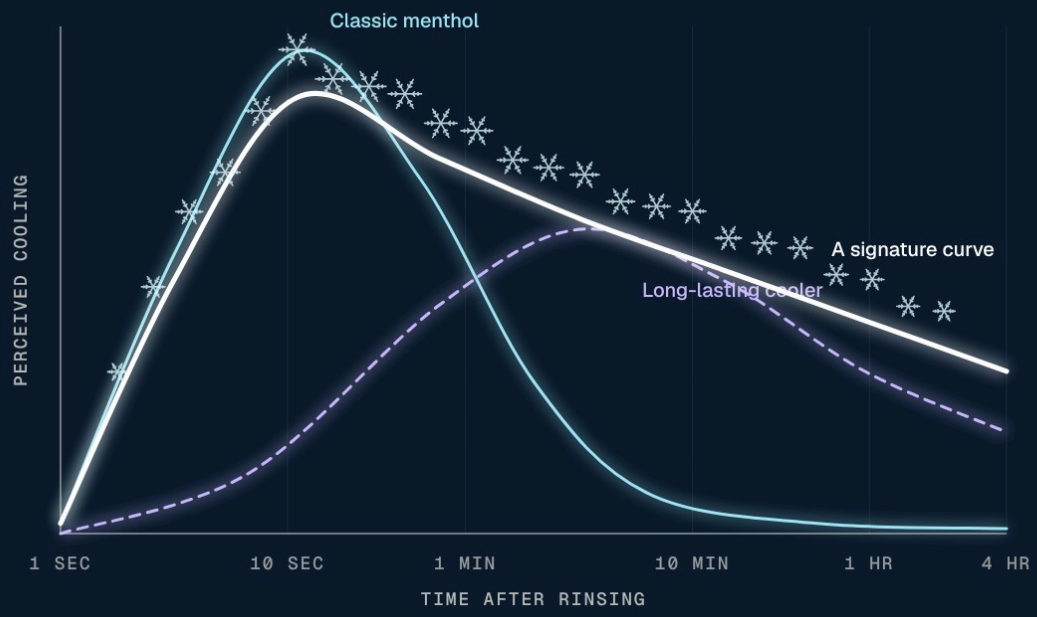

- Taste is the tongue: sweet, sour, salty, bitter, umami.
- Aroma is the nose, including what rises from the back of the mouth when you swallow.
- Feel is the trigeminal nerve. That's where cooling, tingle and warmth come from.
- Texture and temperature change how a flavor comes across too, so all four samples should be served the same way.
- Everyone tastes a little differently. Our genes set how sensitive we are to bitterness, taste gets less sensitive with age, and what we grew up eating shapes what we like. So expect the scores to spread, and treat that as useful.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

FLAVOR SCHOOL · HOW COOLING WORKS

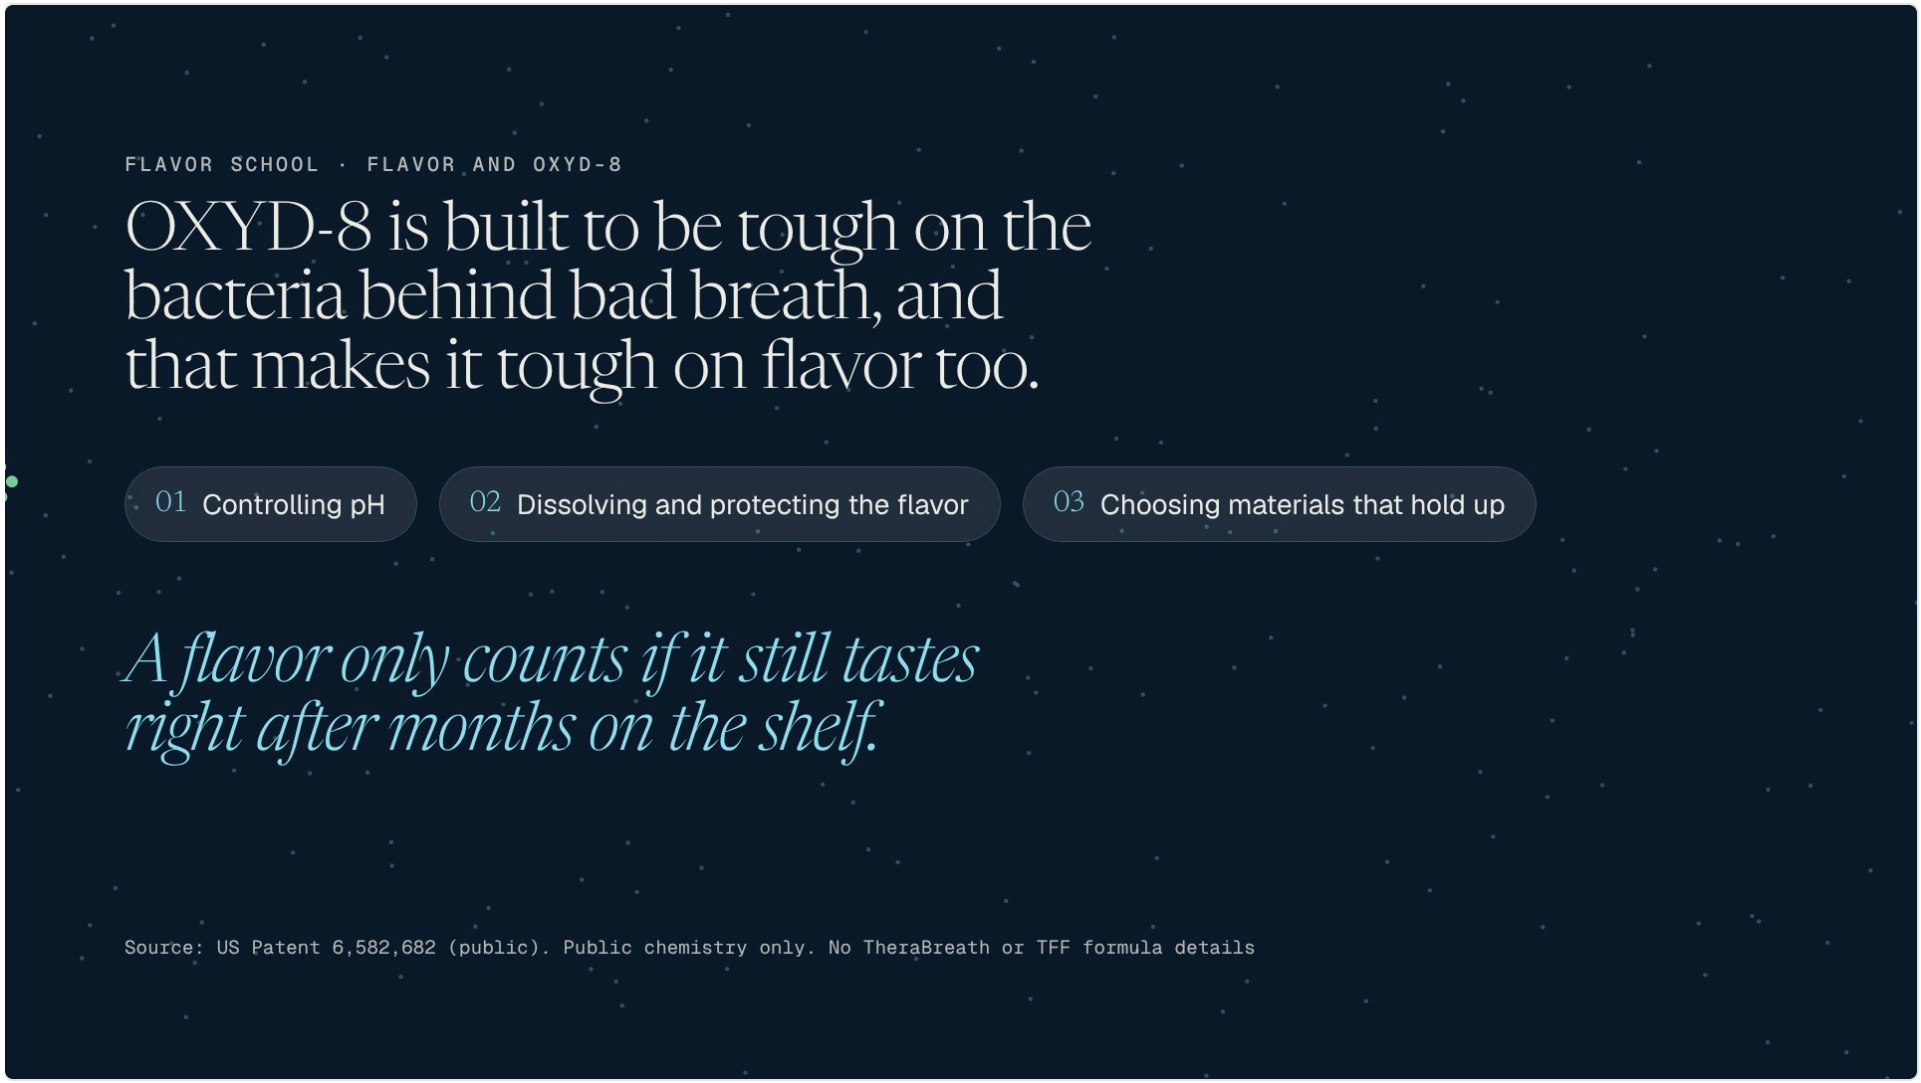

Cooling does two jobs.

There's the hit when you first rinse, and there's how long it lasts. We tune both.

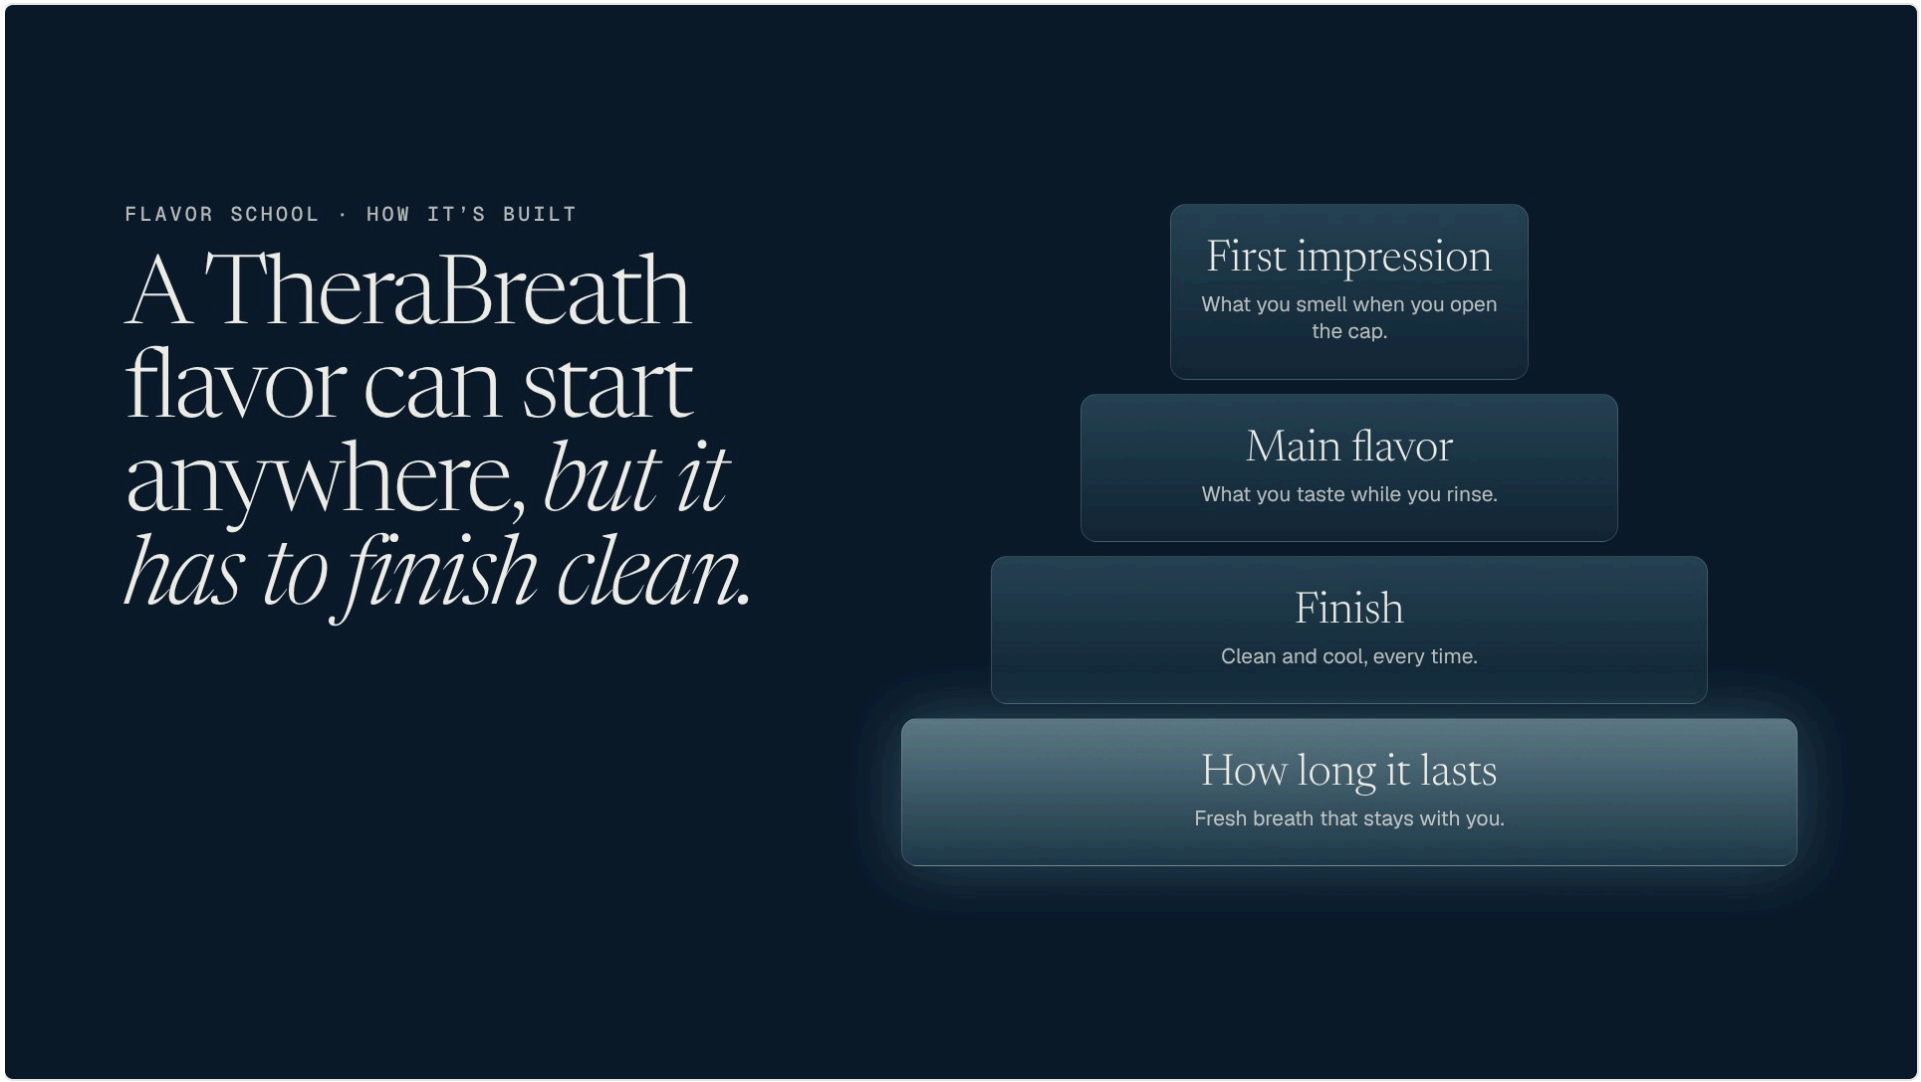

Drawn to explain the idea. These aren't measured curves.

- Cooling does two jobs: the hit when you first rinse, and how long it lasts.
- These curves are drawn to explain the idea. They aren't measured data.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

- OXYD-8 is tough on the bacteria behind bad breath, and that makes it hard on flavor.
- We have three things to work with: pH, how we dissolve and protect the flavor, and choosing materials that hold up.
- Stick to public chemistry. No formula details.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

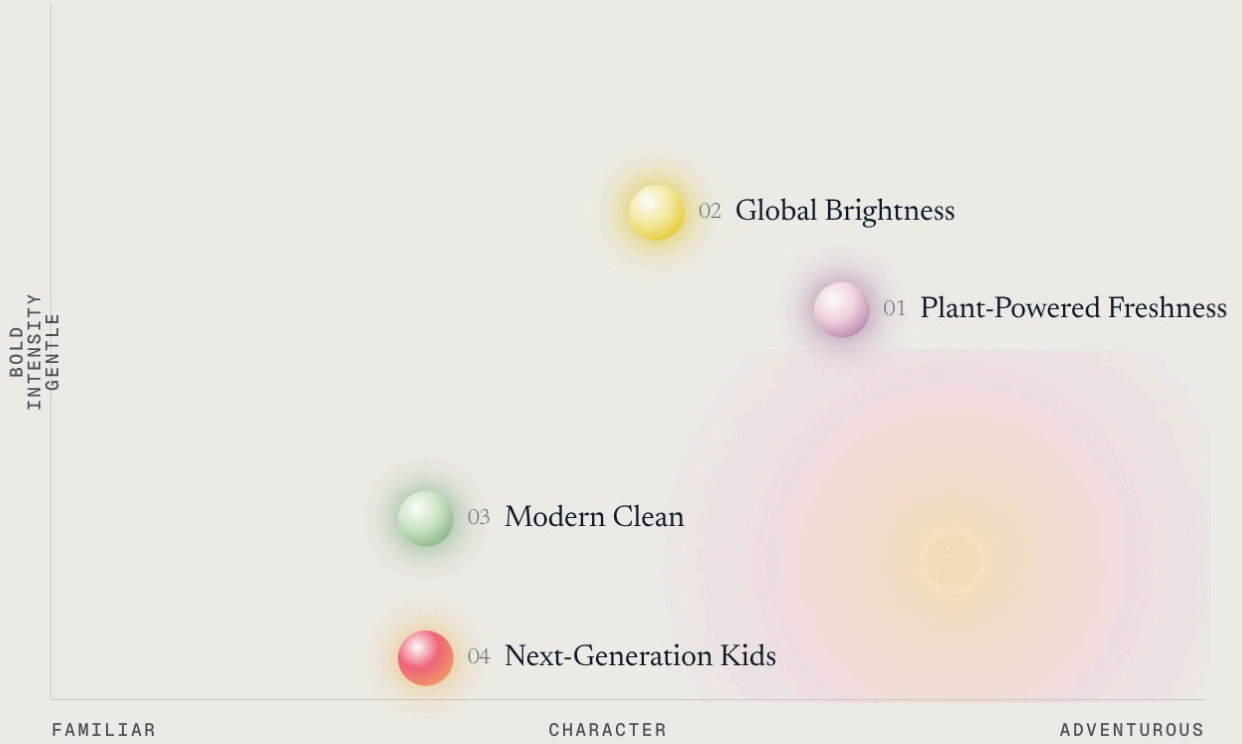

- Walk through the layers: first impression, main flavor, finish and how long it lasts.
- Whatever it starts with, a TheraBreath flavor has to finish clean.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

FOUR DIRECTIONS

Where we think *flavor could go.*

Two of these are in today's tasting. For the other two, we just want your opinion.

Our view, not data.

- Four directions on one map, from familiar to adventurous and from gentle to bold. It's our view, not data.
- The gentle, adventurous corner is where we think new users could come from.
- Two of these are in today's tasting.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

DIRECTION 1 OF 4 · EVERY DAY

Plant-Powered Freshness

In today’s tasting

Citrus, herbs and a touch of floral, always finished with mint.

WHERE IT STANDS

We made two botanical samples for today, both in your Fresh Breath base.

These are still development samples, and we’re testing how well they hold up in the base.

WHAT IT TASTES LIKE

It opens bright with citrus and herbs and finishes on mint.

We’ll tell you which samples these are after the tasting.

WHO IT’S FOR

Adults who’d like something besides straight mint.

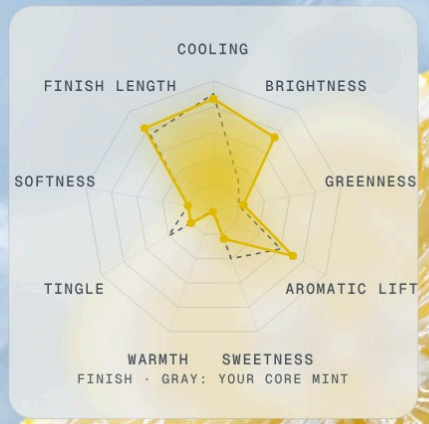

- Plant-Powered Freshness: Citrus, herbs and a touch of floral, always finished with mint.
- Two of today’s samples come from here. Don’t name them yet.
- Ask: Which of the two samples feels more like TheraBreath?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

DIRECTION 2 OF 4 · MORNINGS AND GOING OUT

Global Brightness

For discussion

Citrus people already know, taken somewhere new.

WHERE IT STANDS

This one isn't in today's tasting, but we'd love your read on it.

WHAT IT TASTES LIKE

A burst of citrus, then a cold, clean finish.

WHO IT'S FOR

Morning rinsers, people heading out the door, and markets outside the US.

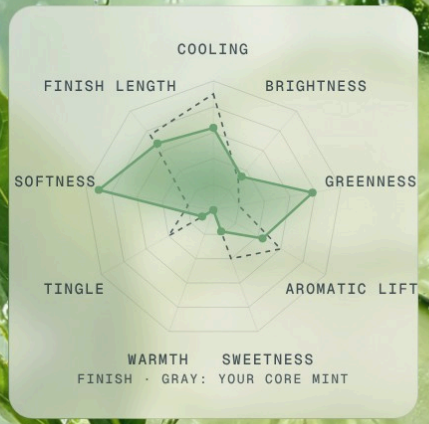

- Global Brightness: Citrus people already know, taken somewhere new.
- This one isn't in the tasting. We just want their opinion.
- Ask: Is there a citrus that could sit comfortably next to your mints?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

DIRECTION 3 OF 4 · MIDDAY

Modern Clean

For discussion

Green, gentle freshness for people who find mouthwash too strong.

WHERE IT STANDS

It isn't in today's tasting, and it would need consumer testing in your base first.

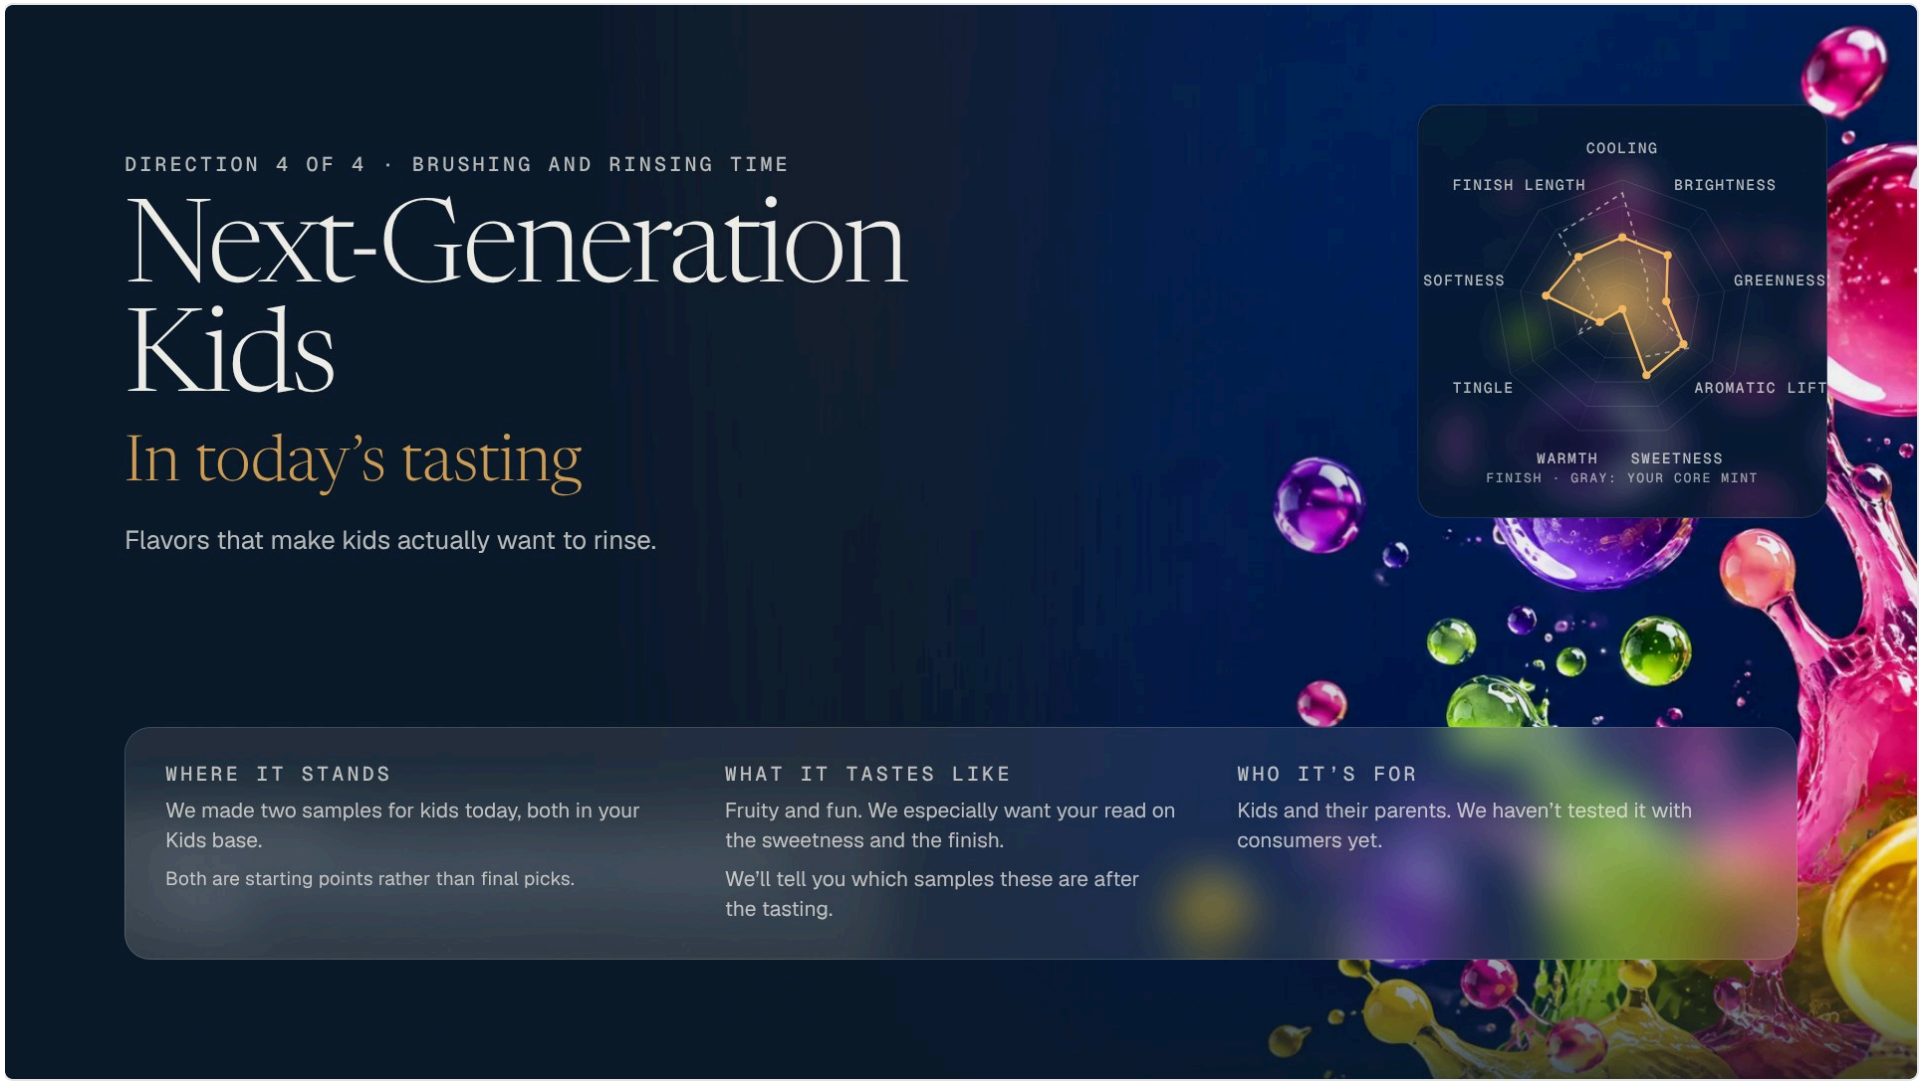

WHAT IT TASTES LIKE

Soft cooling, a few green notes and a calm finish.

WHO IT'S FOR

People who skip mouthwash because they find it too harsh.

- Modern Clean: Green, gentle freshness for people who find mouthwash too strong.
- This one isn't in the tasting. We just want their opinion.
- Ask: Can a gentle flavor still feel fresh enough?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

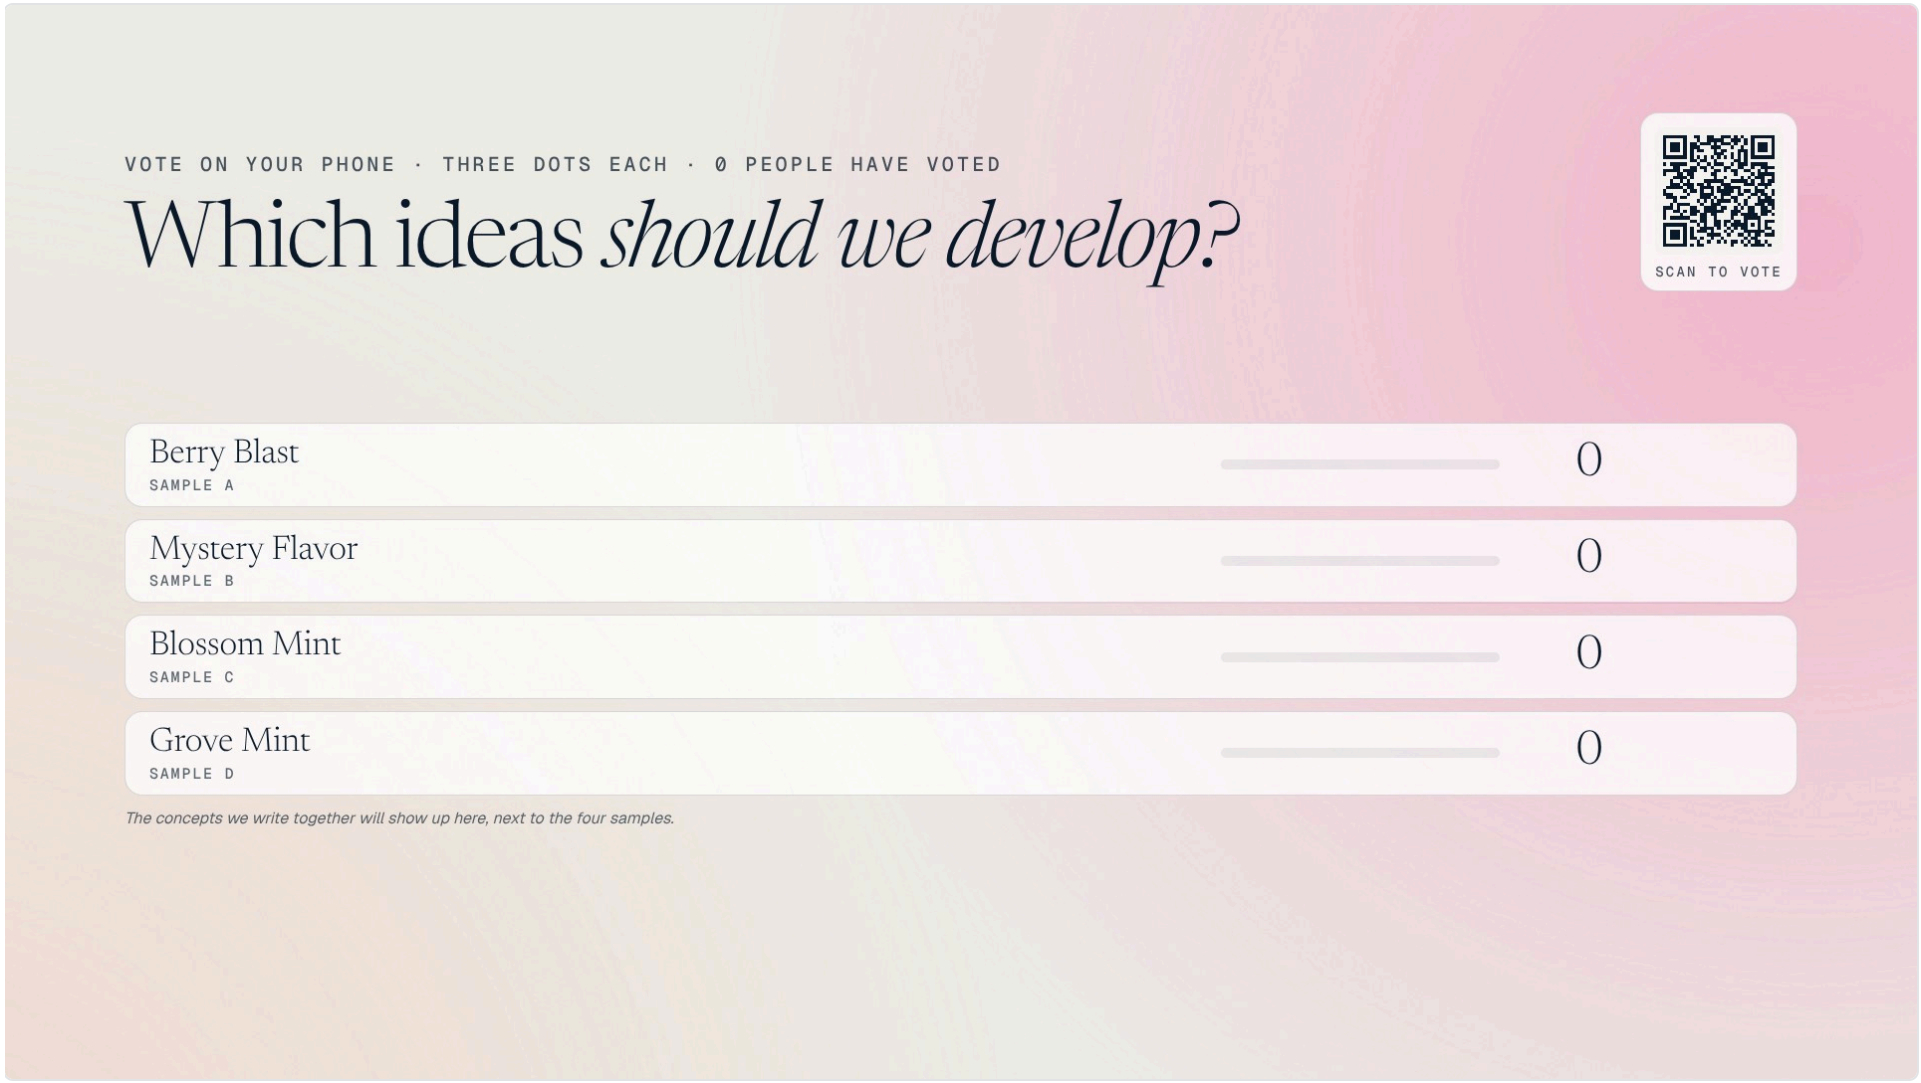

- Next-Generation Kids: Flavors that make kids actually want to rinse.
- Two of today's samples come from here. Don't name them yet.
- Ask: Would a mystery flavor get kids more interested in rinsing?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

BACKUP · UP TO THREE CONCEPTS

Which moment of the day is TheraBreath missing? *Who could a new flavor bring in?*

CONCEPT 1	CONCEPT 2	CONCEPT 3
Working name	*Working name*	*Working name*
STARTS FROM	STARTS FROM	STARTS FROM
WHO IT'S FOR	WHO IT'S FOR	WHO IT'S FOR
WHEN	WHEN	WHEN
ROLE IN THE RANGE	ROLE IN THE RANGE	ROLE IN THE RANGE
FORMAT	FORMAT	FORMAT
WHAT IT GROWS	WHAT IT GROWS	WHAT IT GROWS

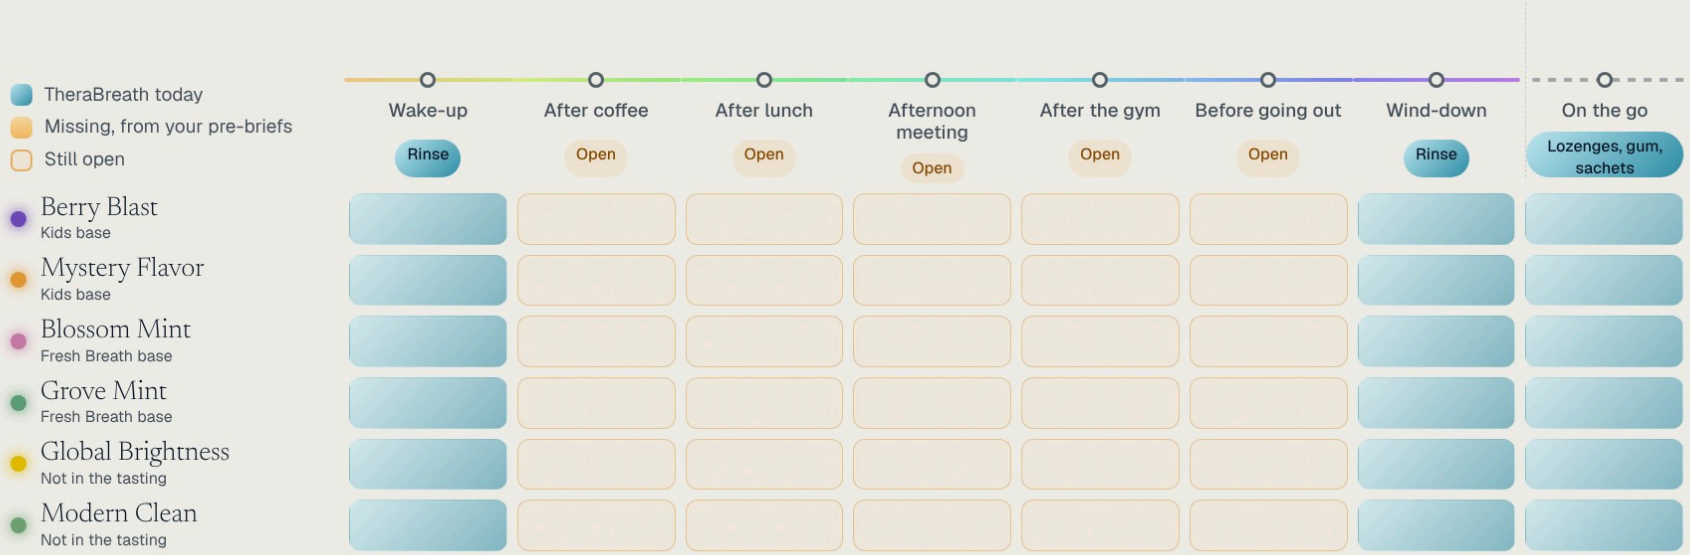

- Start from what scored well and what got chips. If the room is stuck, offer one of the two example concepts on the run sheet, and say its assumptions out loud.
- Aim for up to three. For each one, cover where it starts, who it's for, when they'd use it, its role in the range, the format and what it grows.
- Type while they talk. The boxes suggest options from this morning, and everything saves to the session as you go.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

- Everyone gets three dots for the concepts or samples they'd develop. Stacking is fine.
- Build 1 shows the top three.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

BACKUP · WHITE-SPACE OPPORTUNITIES · OUR READ, SO CORRECT US WHERE WE'RE WRONG

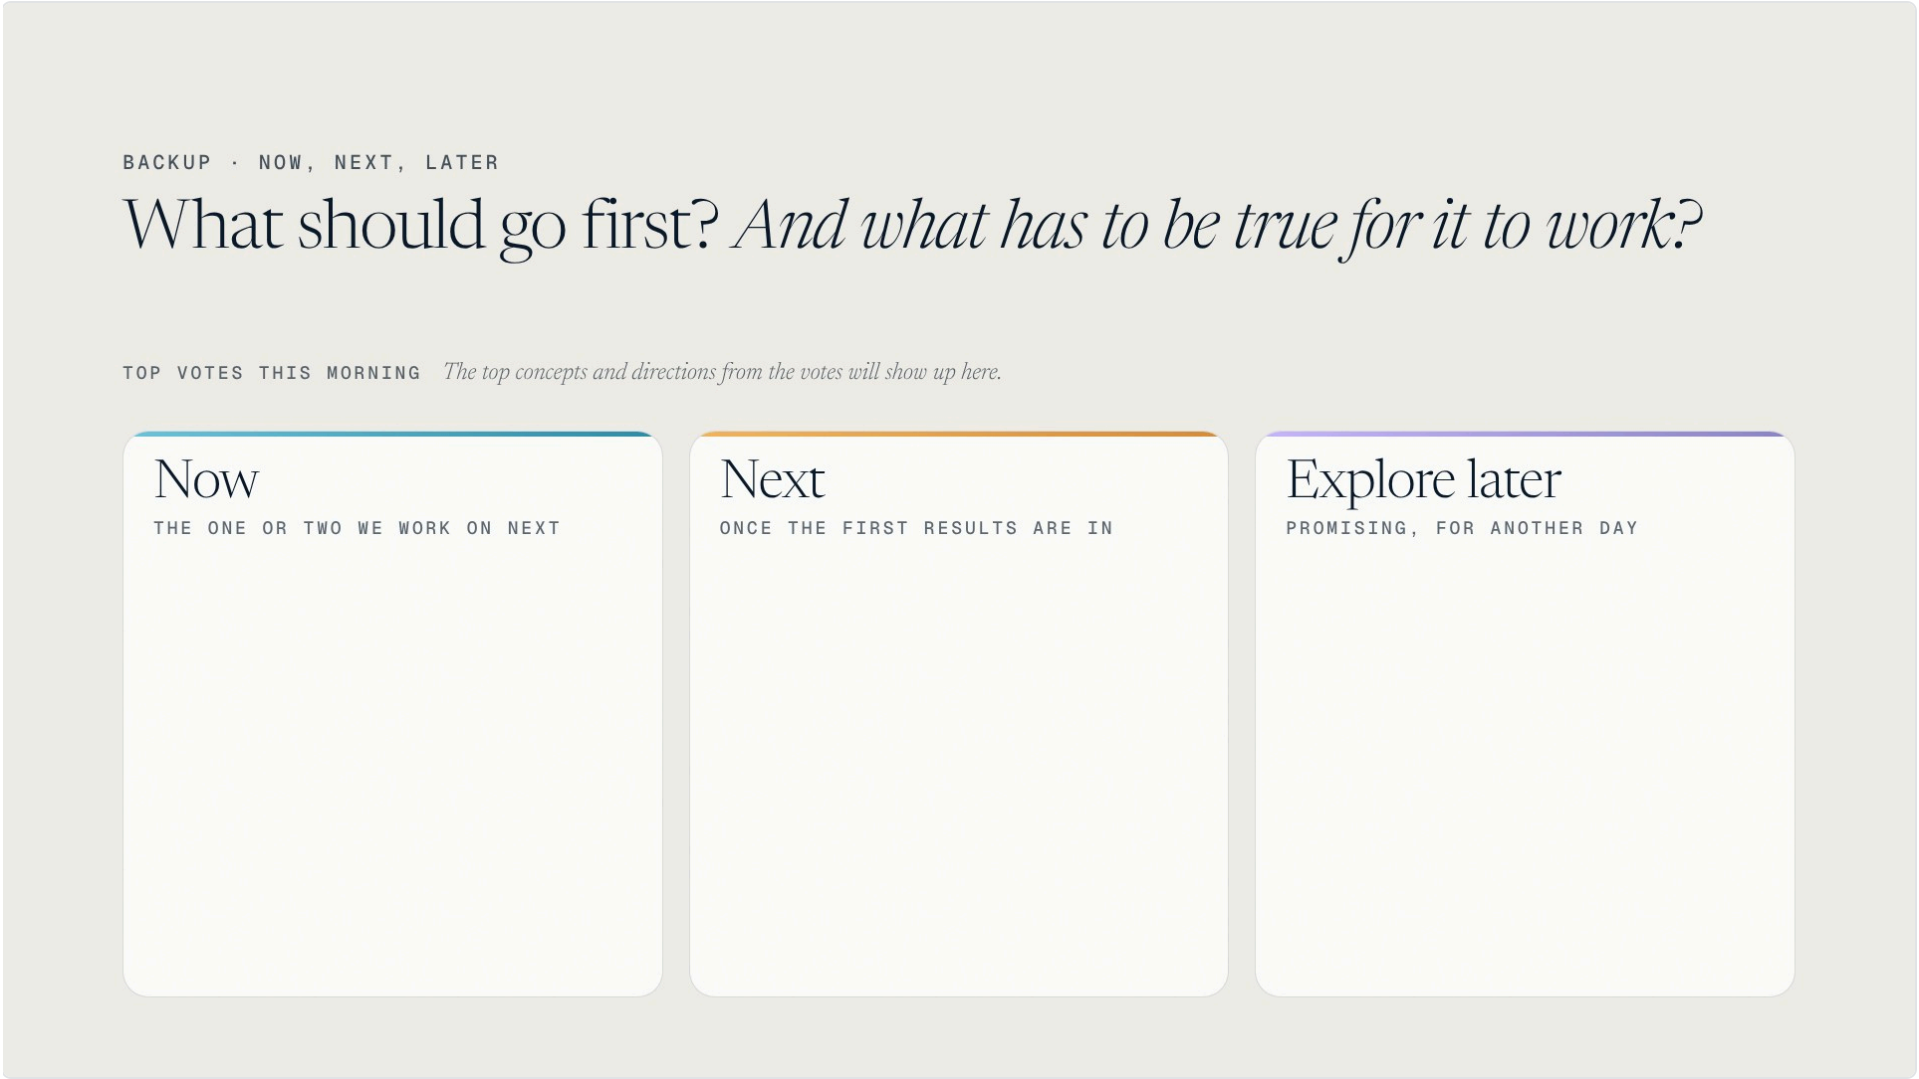

Most of the day *is still open.*

Ross asked for flavors that *unlock new usage occasions.* Every open moment is one. Click a cell to mark where an idea fits.

This is our read of the public product listings, not measured data, so tell us where we've got it wrong.

- This is a day from morning to night, with on the go set off to one side.
- Build 1 shows where we think TheraBreath is today: rinse in the morning and at night, plus lozenges, gum and sachets on the go. Ask them to correct us.
- Build 2 adds the moment their pre-brief answers say is missing, and build 3 shows everything that's still open.
- The rows are this morning's concepts, or the samples and directions if none are written yet. Click a cell to mark where each one could fit.
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.

- The full board, if Ross's team wants a longer roadmap: each idea under Now, Next or Explore later, one line each, with the same fields as What we work on next plus owners and the base.
- It writes the same rows as What we work on next, so the read-back shows them either way.
- What would you need to see in the next round of samples?
- A backup slide, for questions or more time on this topic. Return in the presenter view (or Escape on the TV) goes back to where the main flow left off.
