

DISCOVERY AND STYLE FRAMES

The Flavor Playbook

TheraBreath × The Flavor Factory

A live workshop experience for Church & Dwight.
Monday, November 9, 2026, 10:00 to 12:00.

SECTION 0, STEP 1

Restate. Ask. Propose. *Then build.*

Your brief asks us to start with discovery: say the experience back in our own words, list every open question, and propose two visual directions as style frames. Nothing gets built until you approve a direction.

So this pack is exactly that. The frames are real renders, not mood boards: the glass, the light and the caustics come from the same WebGL shaders that would run on the stage, which is also our first test that the ambition is buildable.

IN THIS PACK

- 03 What we heard
- 04 The morning at a glance
- 05 Four surfaces, one session
- 06 The stack, confirmed
- 07 The idea behind both directions
- 08 Direction A, Laboratory Light
- 16 Direction B, After Hours
- 24 Side by side
- 25 Our recommendation
- 26 Motion tests
- 27 Open questions
- 30 Next steps

THE EXPERIENCE, IN OUR WORDS

On Monday, November 9, from 10:00 to 12:00 in Darwin, The Flavor Factory leads about ten people from Church & Dwight through two hours that answer, in order, the four things Ross's invitation asked for. **It is not a presentation.** It is one live environment on four synchronized surfaces, and everything the room does becomes part of a document they leave with.

We open by showing the room its own brief as our agenda. Act I lays out what is changing: the climb, the 14% versus 65% gap, a portfolio that has mastered mint, and seven signals the room narrows to three. Act II is Flavor School, where Alex teaches how flavor works and how it survives OXYD-8.

Act III is the territory flight: seven worlds, a blind tasting of four prototypes scored on phones, and a chip vote. Act IV mixes the teams to build concepts on a shared canvas and pitch them as posters the system designs. Act V places the winners on a Now, Next, Future board, drafts a 2027 flavor calendar and edits a seven rule Flavor Code. At 11:55 the Playbook v0.1 assembles itself on screen with their names on the cover. The PDF exists by 12:05.

It has to survive a real conference room: unknown projector, unknown Wi-Fi, a hard stop at noon. So the stage runs from a local build, every vote has a paper path, every 3D scene has a video fallback, and the console recovers anything in one click.

NORTH STAR

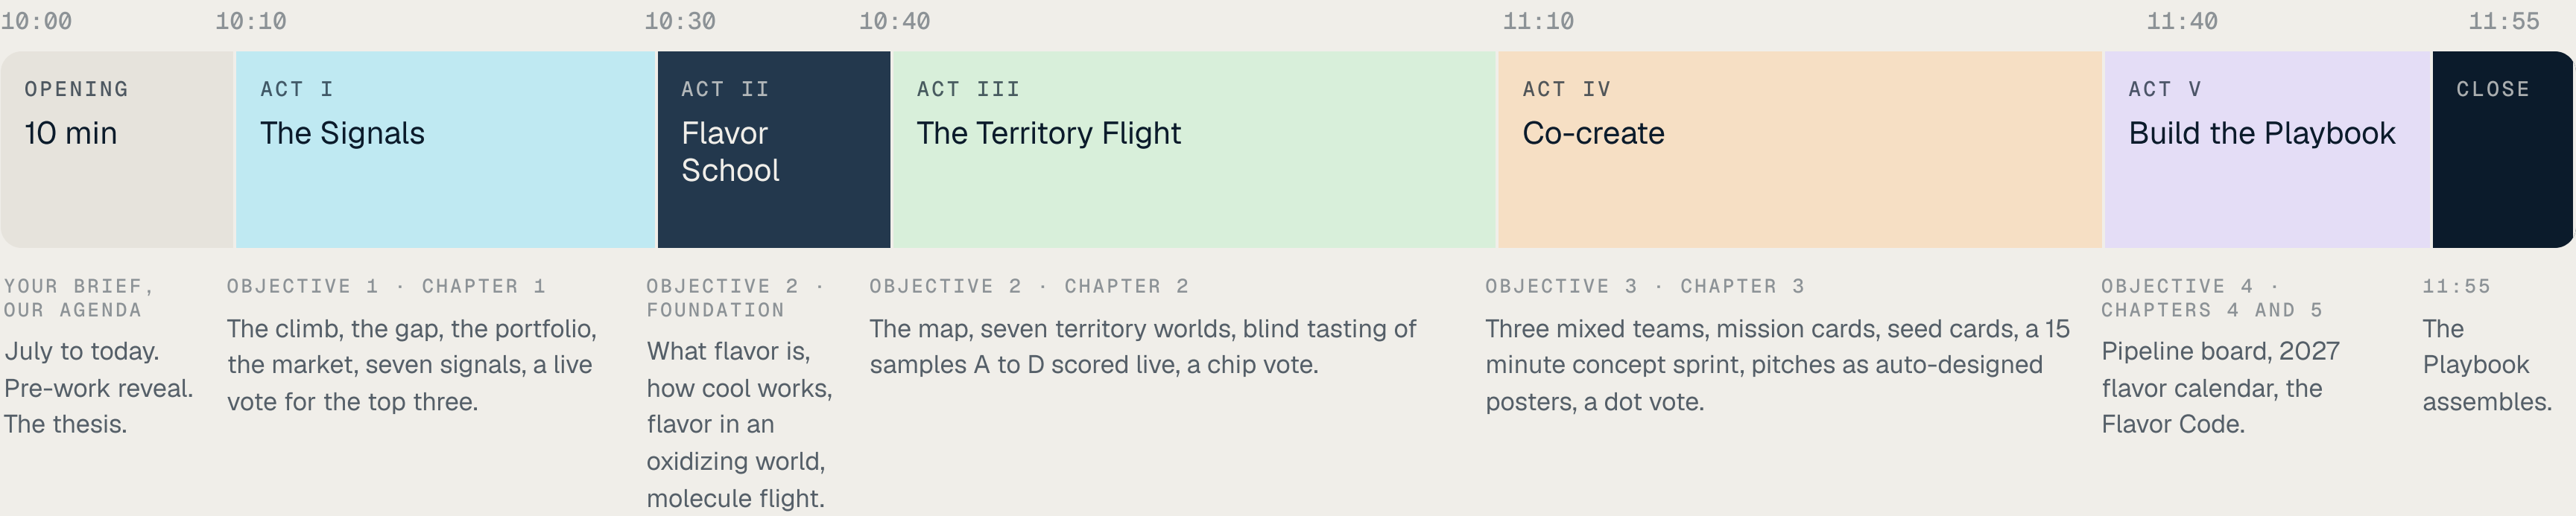

TheraBreath took away the burn. Now we add the want.

WHAT THEY SHOULD FEEL AT NOON

The Flavor Factory is not our supplier. They are our flavor strategy team.

RUN OF SHOW, 120 MINUTES

Their four objectives are the structure. *Each act writes a chapter.*

Before: the arrival loop from 9:15, and a three question pulse survey sent around October 26 that opens the session.

After: the lunch loop in the colors of the territories the room chose, and Playbook v1.0 within eight business days.

ARCHITECTURE

One session code. One state machine. *Four views of the same morning.*

01

Stage

THE ROOM DISPLAY

The cinematic show: story, data, reveals and live results. 16:9 at 1080p and 4K. Runs fully offline from a local build on the presenter laptop.

02

Room

EVERY PHONE

Scan the QR, type a first name. Voting, tasting scorecards, the concept canvas, reactions. Always mirrors the scene. Remote attendees get the same view plus a stage mirror.

03

Console

MATT, WITH RYAN OPERATING

Scene control, timers, open and lock votes, reveal, spotlight, speaker notes, participant health, Executive Mode, emergency jumps and Paper Mode.

04

Playbook

THE OUTPUT

Assembled from every vote, rating, concept and placement into a designed book. Web version plus a server-side PDF in A4 and US Letter.

The session

An XState scene machine that Console advances and Stage and Room subscribe to. A managed real-time layer under 300 ms from tap to stage. Every interaction written to one session record, which is what the Playbook is generated from. Export as JSON and CSV, wipe in one click.

PAPER MODE

If phones fail, Ryan types tallies from paper cards and the stage keeps going.

OFFLINE STAGE

A local production build with every asset cached. Wi-Fi only matters for phones.

VIDEO FALLBACKS

A pre-rendered clip for every WebGL scene, in case the laptop GPU struggles.

THE PDF OF THE STORY

The whole stage as a PDF: the last line of defense.

STACK CONFIRMATION

We keep your recommended stack. *Four changes, each for a reason.*

LAYER	YOUR BRIEF	OUR PROPOSAL	WHY
APP	Next.js App Router, TypeScript, Tailwind	Same	
MOTION	Motion (Framer Motion) and GSAP	Same	
3D	React Three Fiber, drei, postprocessing	Same, plus our own light shaders	Dispersion, caustics and the dichroic glow are the concept. Stock materials do not do them. These frames already run on those shaders.
SCENE STATE	XState	Same (v5)	
REAL-TIME	Supabase, Liveblocks or PartyKit	Supabase (Realtime plus Postgres) through the Vercel Marketplace, under a TFF account	A durable session record, SQL for the Playbook, simple CSV and JSON export and a one-click wipe. The Marketplace wires the keys into Vercel for us.
ACCESS	Password gate on all surfaces	App-level gate in Next.js middleware. Phones join through a signed QR token	Vercel's own password protection is a paid add-on. Nobody should type a password on a phone at 10:00.
PDF	Server-side	Headless Chromium in a Vercel Function printing the Playbook web route	The PDF and the web version can never drift apart.
TYPE	Fraunces, Inter or Geist, a mono	Newsreader , Geist and Geist Mono, self-hosted	Newsreader has a cleaner lowercase f than Fraunces and optical sizes for the stage. Geist holds up at stage sizes.
FALLBACKS	Local build, video, PDF	Same. Every video as H.264 MP4, yuv420p	It plays in Edge on Windows. We just fixed exactly this on the current opening film.
QUALITY GATES	Dash test, WCAG 2.2 AA, visual regression	Same. The dash check runs as a pre-commit hook and in CI	See the scope question on page 27.

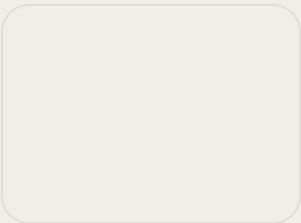

CLARITY, REFRACTED

Color never comes from dye. *It comes from light.*

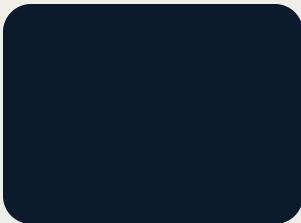

TheraBreath's rinse is clear and dye-free. So everything here starts clear: a drop, a glass, a swirl. Color only appears when light passes through it and splits into the spectrum of whichever territory we are in.

It carries the whole argument. In the gap scene, the empty 86% of the TheraBreath glass does not fill with liquid, it fills with light: the flavors still to come. And the rising bubbles that carry each name echo the rising dots in The Flavor Factory's own logo.

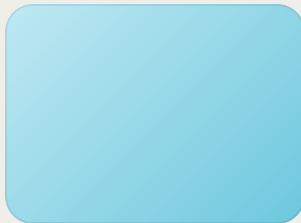

CORE TOKENS

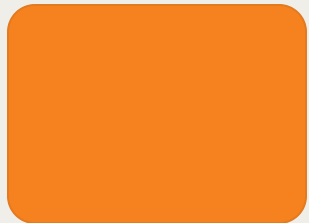

Cloud
#F0EEE9

Ink
#0B1B2B

Glacier
#BFE9F2 · #6CC7DD

Orange
placeholder

TYPE THAT CHANGES TEMPERATURE

Warm Cool

Warm territories set in Newsreader italic, cool ones upright and crisp, so the headline itself gets warmer or cooler.

ONE SHARP ACCENT

TheraBreath orange appears once per screen, like the cap: the live dot, the primary action. Sampled from official assets when you send them.

DIRECTION A

Laboratory
Light

Bright and airy. A Cloud Dancer base, ink type, glass and light. Precise editorial layouts with hairline data, like a scientific journal designed by Pentagram. It reads in a lit room and survives any projector.

LIGHT

Bright field: clear glass defined by dark reflections, soft window light, pastel spectra and dichroic color on white.

MOTION

Crystalline and exact. Data draws itself in hairlines. Liquids settle rather than splash.

BEST FOR

Most of the session, and any room with a projector or daylight.

WELCOME. WE START AT 10:00.

The Flavor Playbook

Where fresh goes next.

5

● IN THE ROOM

PRE-SHOW · 9:15

Arrival

The clear drop turns slowly over its own caustic. Each person who joins sends a bubble up through it carrying their first name. At the tip it dissolves into light.

MOTION

A breathing rotation. Bubbles rise over six seconds and burst at the tip. The counter ticks up.

THE FLAVOR PLAYBOOK

ACT I THE SIGNALS

10:17

THE GAP

86 of every 100 US households have not met TheraBreath yet.

Flavor is how we introduce ourselves.

Household penetration: TheraBreath 14%, mouthwash category 65%.
Source: Church & Dwight Q2 2026 earnings call, July 31, 2026.

01 SIGNALS

02 TERRITORIES

03 CONCEPTS

04 PIPELINE

05 FLAVOR CODE

SCENE 7 · ACT I

The gap

The emotional center of the business case. The category glass fills to 65%, the TheraBreath glass to 14%. Then the empty space fills with light, not liquid: dichroic color, the flavors still to come.

MOTION

Pour, settle, count up with the fill. A beat of silence. Then the spectrum blooms.

The map

Eleven adult rinse flavors cluster in classic mint. The quadrant nobody owns, adventurous character at gentle intensity, glows. Clearly labeled as our perspective, not panel data.

MOTION
The axes draw, the mint cluster settles, then the camera pulls back and the white space lights up.

THE FLAVOR PLAYBOOK

ACT III THE TERRITORY FLIGHT

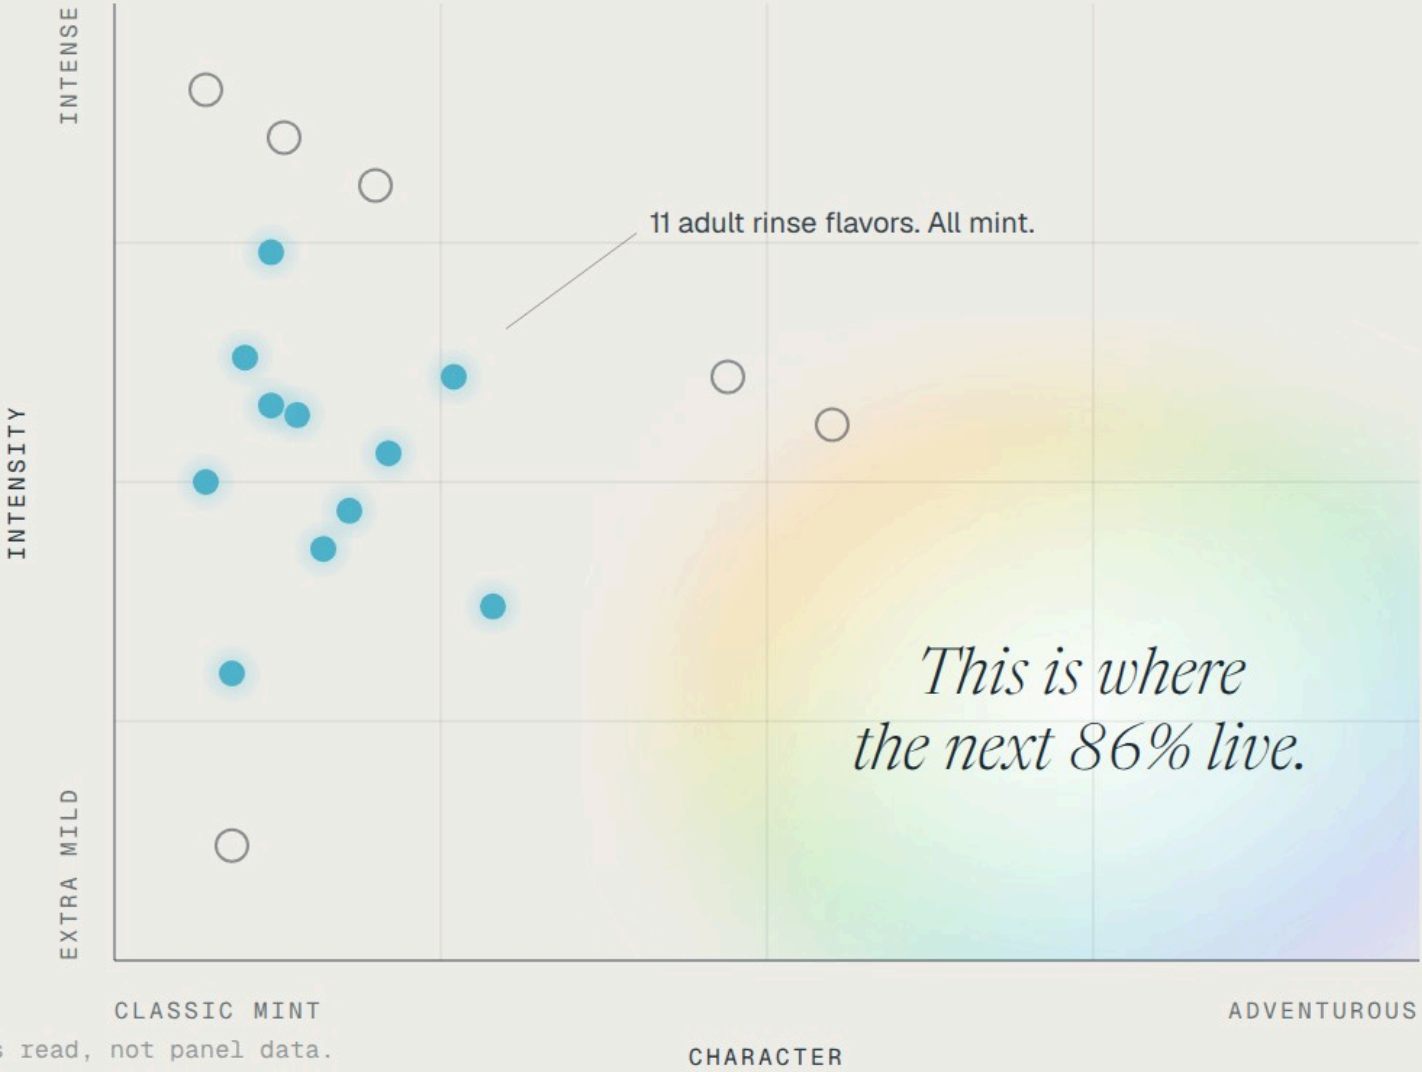

10:41

WHERE FLAVOR CAN GO

We have mastered mint.
The rest of the map is open.

Eleven adult rinse flavors, all of them mint. Plotted by intensity and by character.

- TheraBreath adult rinse flavors (public portfolio)
- Competitor flavors (public)
- White space

TFF perspective, illustrative. Positions are The Flavor Factory's read, not panel data.

How cool works

Three illustrative cooling curves on a log time axis: classic menthol, a long-lasting cooler and a signature blend. Frost grows along the signature curve.

MOTION

Each curve draws in real time while frost crystals grow in sync. Wording to be confirmed with Alex.

THE FLAVOR PLAYBOOK

ACT II FLAVOR SCHOOL

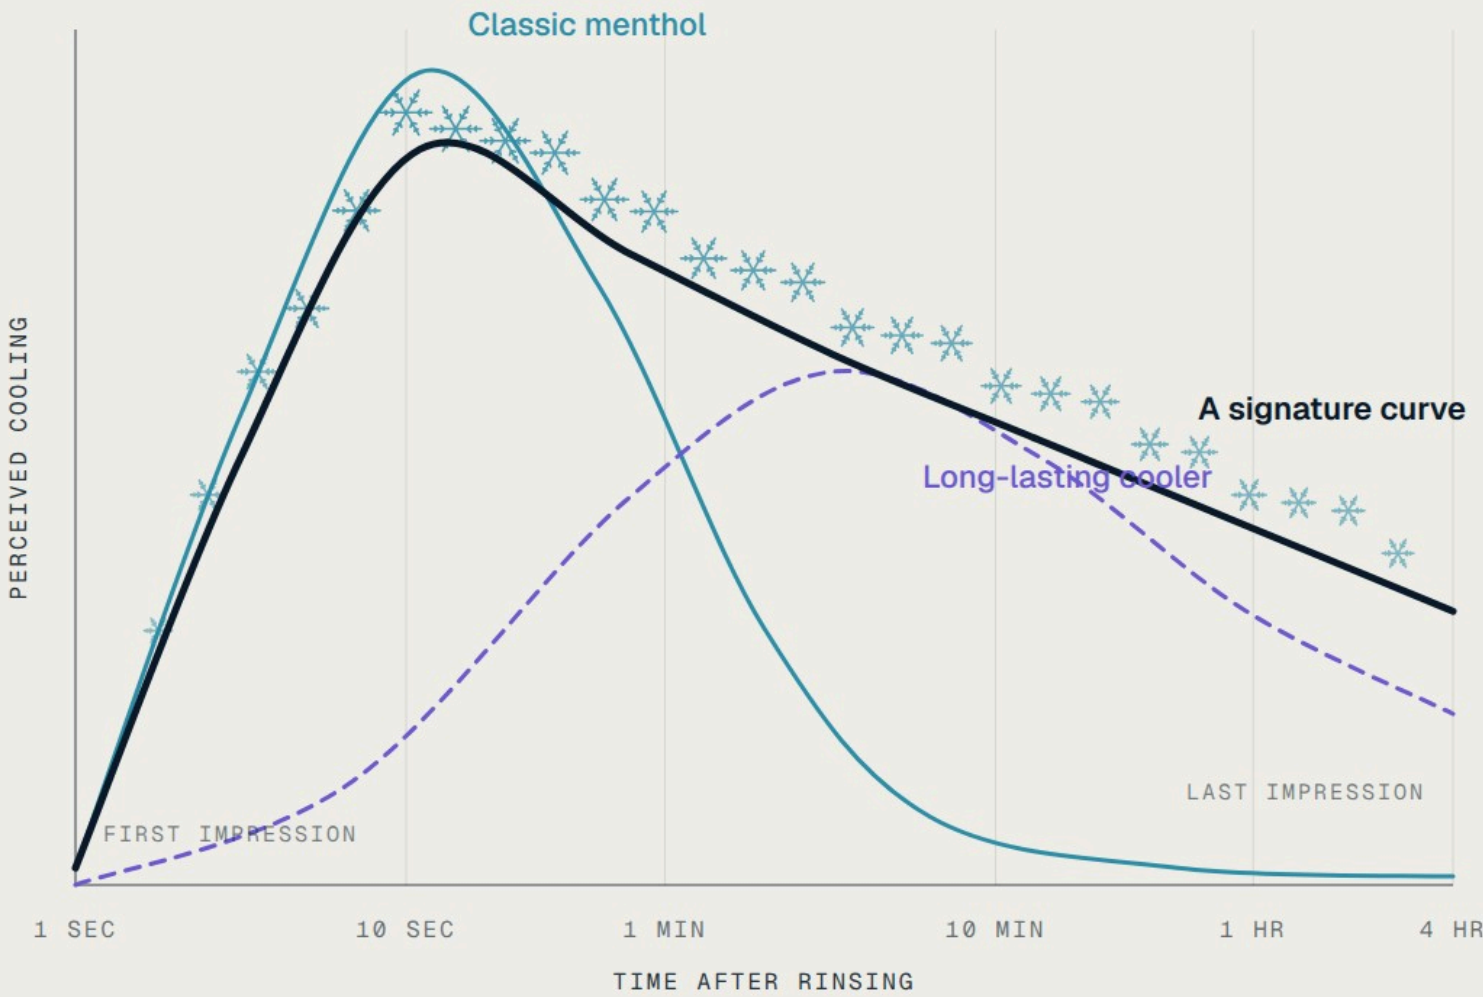

10:33

FLAVOR SCHOOL · HOW COOL WORKS

Cooling has two jobs.

The first impression and the last impression. We design both.

Illustrative curves for teaching, not measured data.
Copy to be confirmed with Alex.

SCENES 24 TO 30 ·
ACT III

A territory world

Warm Meets Cool. The headline changes temperature: Warm is soft and italic, Cool is crisp. The photograph is a generated look target; final imagery is art directed per territory.

MOTION

Warm light drifts in from the left, frost creeps in from the right, and they meet on the pod.

ROOM · EVERY PHONE

Join, taste, vote

The phone always mirrors the scene. One-thumb screens, droplet sliders that fill as you rate, chips that pop. One orange element per screen: the action.

MOTION
A frost ripple on submit. Haptics where supported. Calm crossfades under reduced motion.

THE FLAVOR PLAYBOOK

ROOM, ON EVERY PHONE

Scan once.
Then just follow the screen.

No app, no login beyond a first name. The phone always mirrors the scene.

– Droplet sliders that fill as you rate

– Chips that pop like bubbles

– A frost ripple when you submit

– Large text and reduced motion respected

11:55, ASSEMBLED LIVE

The Playbook *you just built.*

Every vote, rating, concept and placement from this morning, set as a designed book. Your names on the cover. A polished PDF by 12:05.

SCENE 41 · 11:55

The Playbook you just built

The book assembles from the session: the cover names the co-authors, the chapters come from the votes, the concept cards from the canvas. Inner pages show rehearsal data.

MOTION

Pages fly in and settle, charts draw, names set on the cover last.

DIRECTION B

After
Hours

Deep ink, a single shaft of light, luminous liquids and caustics. Cinematic and dramatic, like the lab after everyone has gone home. Best on an LED or LCD panel in a dimmed room.

LIGHT

Dark field: rim-lit glass, a visible shaft, a converging spectral cone under the drop, glowing spectra.

MOTION

Slower and warmer. Reveals come out of the dark. Light is the transition.

BEST FOR

Flavor School, the big reveals and the close. Risky on a projector in a lit room.

WELCOME. WE START AT 10:00.

The Flavor Playbook

Where fresh goes next.

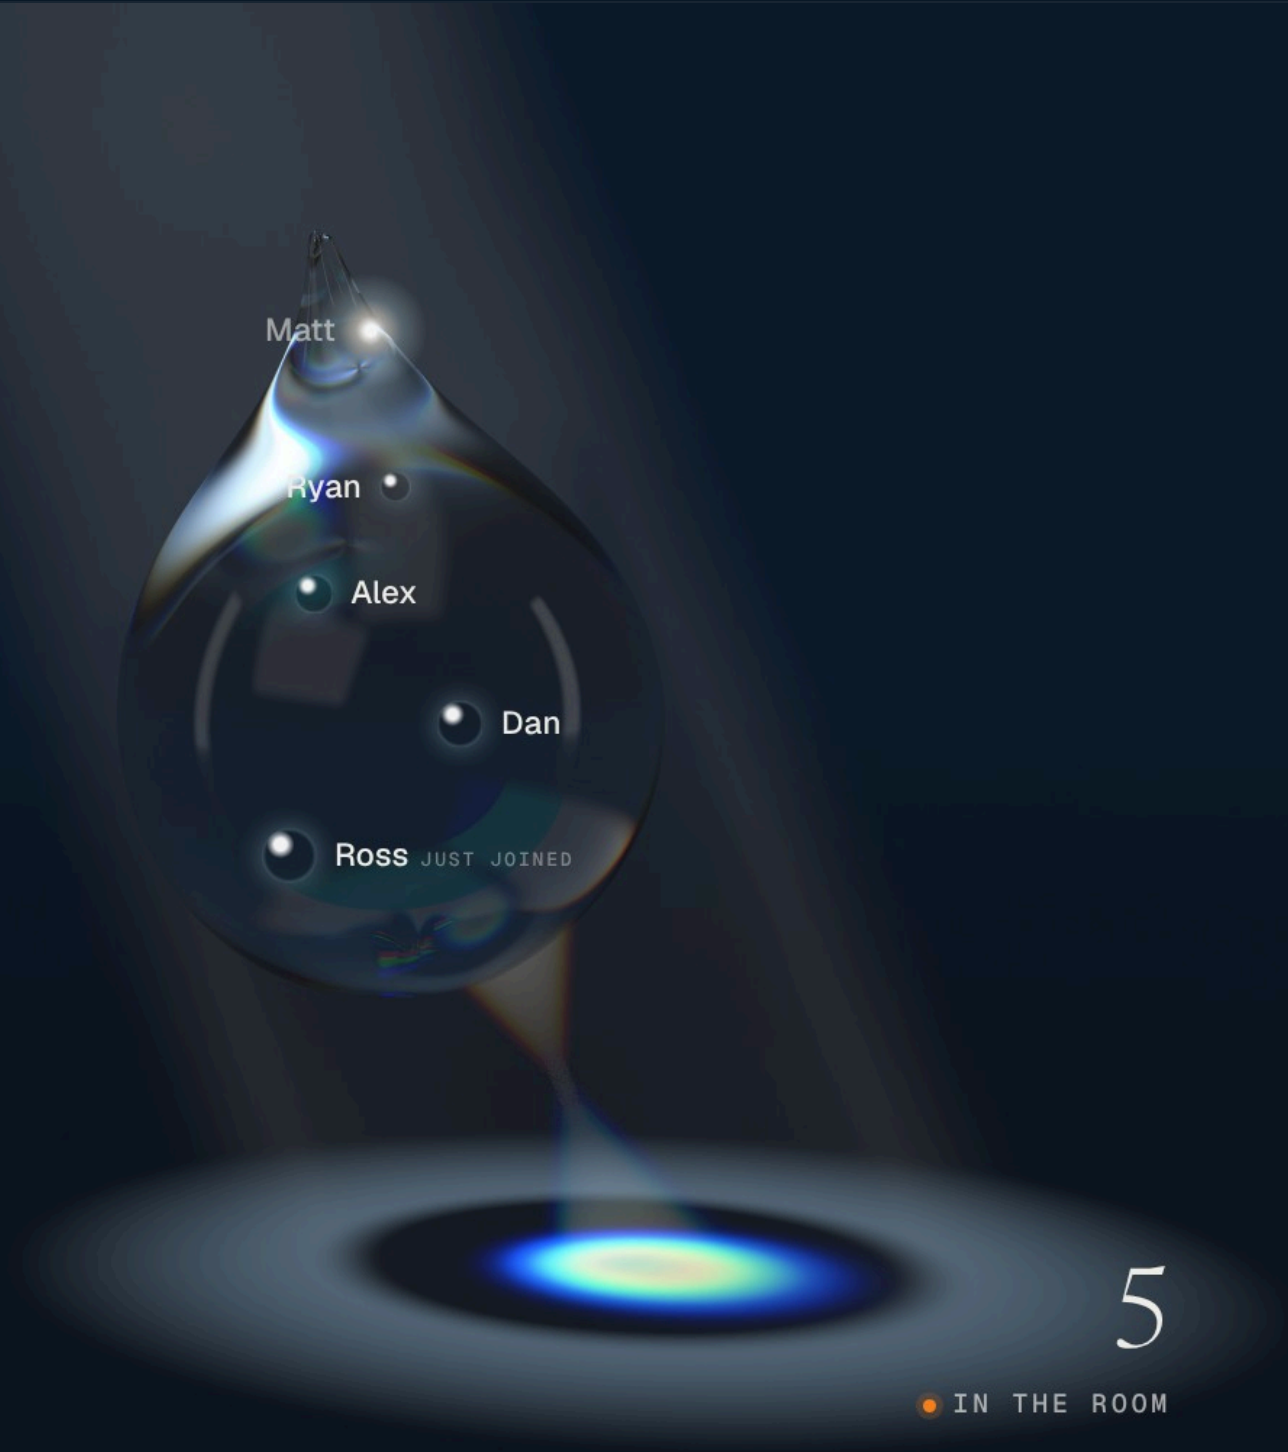

TheraBreath × The Flavor Factory | November 9, 2026

Join the session

Point your camera here. First name only.

TB 1109

PRE-SHOW · 9:15

Arrival

A single shaft of light passes through the drop, narrows into a spectral cone and pools on the floor as a caustic. Names rise through the drop as people join.

MOTION

Dust drifts in the shaft. The cone shimmers as the drop turns.

SCENE 41 · 11:55

The Playbook you just built

The printed book glows out of the dark. The most theatrical version of the close.

MOTION

Pages assemble out of darkness, lit as they land.

SAME SCENES, TWO LIGHTS

A reads anywhere.

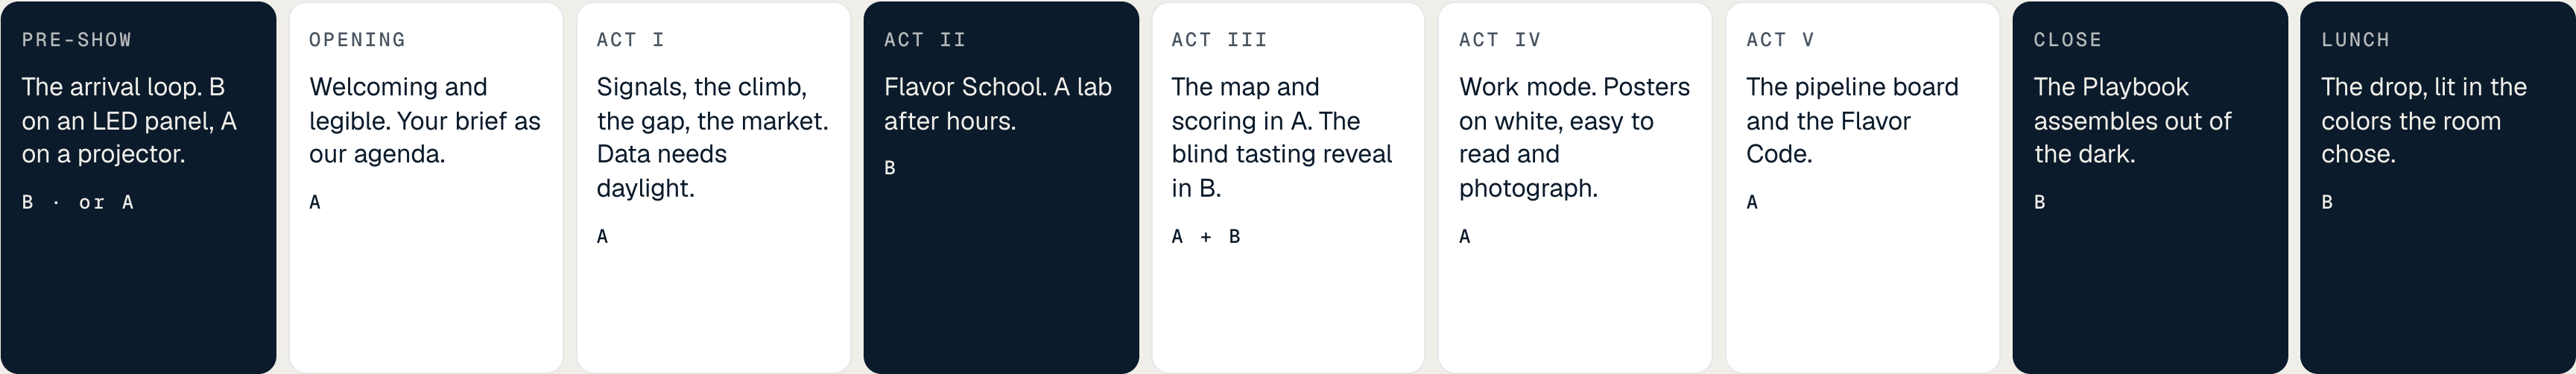

Bright, precise and calm. It survives a projector in a lit room, keeps data legible and feels like a flavor lab at its most rigorous. Its risk is feeling too restrained for the big moments.

B makes the moments.

Dramatic and cinematic, with light you can see. It makes the reveals unforgettable. Its risk is contrast: on a projector in daylight, dark scenes turn muddy.

RECOMMENDATION

The hybrid: *A by day, B for the moments the room should remember.*

WHY

Light, legible scenes carry the working session. Dark scenes are rationed, so every switch to B signals that something matters.

THE TRANSITION

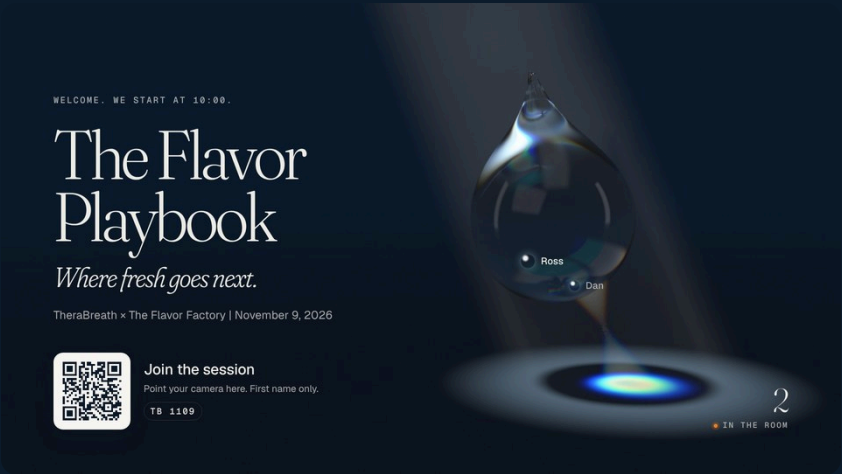

We never cut between A and B. The room dims as light gathers into the drop, and brightens as it releases. Light is the transition.

WHAT DECIDES IT

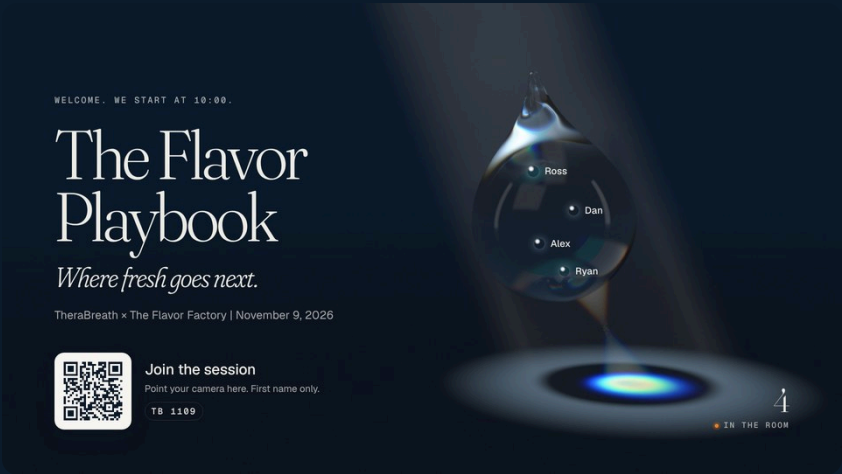

The display in Darwin. If it is a projector, we keep B to Flavor School and the close. If it is an LED or LCD panel, B can open the day too.

MOTION TESTS, RENDERED ON THE SAME SHADERS

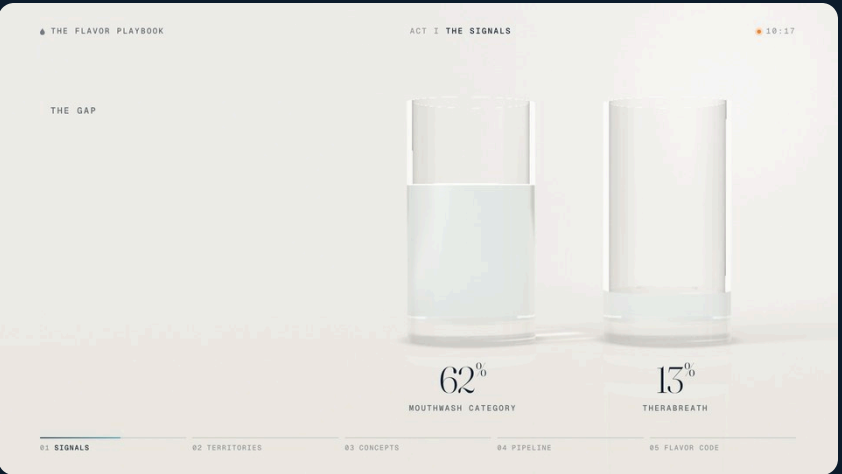

Two seven second tests, *attached as MP4.*

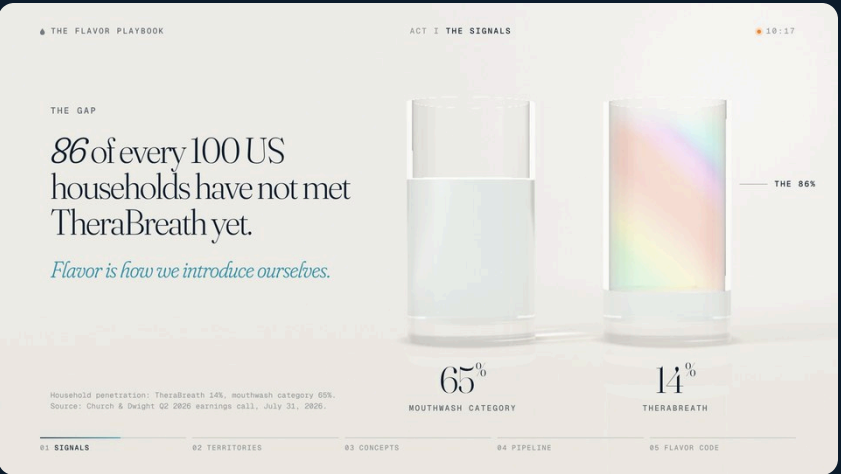

ARRIVAL, B · 0:02

ARRIVAL, B · 0:05

THE GAP, A · 0:02

THE GAP, A · 0:06

Arrival, Direction B

The drop turns in the shaft of light. Five names join one after another, rise through the drop and burst into light at the tip. The counter follows.

The gap, Direction A

Both glasses fill while the numbers count up to 65% and 14%. After a beat, the empty 86% blooms into dichroic light and the headline arrives.

DECISIONS WE NEED BEFORE WE BUILD

Eight answers, and we start.

- 1

Which direction?
A, B, or the hybrid we recommend. Notes on any frame are welcome.
- 2

What is the display in Darwin?
A projector or an LED or LCD panel, and how bright the room is. It decides how much of B we can use.
- 3

Can we create a Supabase project under a TFF account?
Through the Vercel Marketplace. It holds session data only and we wipe it after the Playbook ships.
- 4

Where does it live?
We propose a new playbook app in the WixTheWolf/Therabreath repo, deployed as its own Vercel project. We cannot create Vercel projects from here, so you would create it in two minutes and we wire everything else.

- 5

Who gets the password, and is anyone remote?
One password for Stage, Console and Playbook, held by the TFF team. Phones join by QR token only. Will anyone join on Teams?
- 6

Is this replacing The Future of Freshness, or an alternate?
The current pre-brief promises six sealed territories. This brief has seven different ones. If the pre-brief is already out, the two stories need to connect.
- 7

Can the pulse survey have a link?
Scene 4 needs answers before the day. The current pre-brief deliberately has no links. We suggest a separate survey link around October 26.
- 8

How far does the dash rule reach?
Anywhere in the repo means 34 existing lines in the older site, deck and pre-brief, plus third-party libraries. We suggest checking the new app and our own files, and excluding vendored code.

THINGS IN THE BRIEF WE WOULD FIX BEFORE THEY SHIP

Your rule is zero invented numbers. *These do not meet it yet.*

- 1

Scene 6: "post-acquisition starting point"

The ledger source (MMA Smarties and WARC) describes 5.6% to 15.6% as the Swishy Time campaign's growth, not the acquisition. We suggest "Before Swishy Time: 5.6%."
- 2

Territory 7: "international growth is outpacing domestic"

Not supported as written. The ledger's "fastest-growing mouthwash in Canada, Mexico, the UK and Australia" is safe to use. But it has no comparison with the US, and its only international figure (up 9.1%) is Church & Dwight's total international organic sales.
- 3

Scene 7: "have not met TheraBreath yet"

Household penetration usually counts buying in a period, often 52 weeks, not lifetime trial, and their insights team will know it. Please confirm the definition; we can keep the line with a precise source line.
- 4

Competitor wording

"The no burn promise is now being copied" (Signal 1) and "Listerine's candy-leaning drops" (Seed 3) read as characterizations. Suggested: "Mild is now a category claim" and "a fruit mint made for adults."

- 5

Scene 9: Hismile collaborations

The ledger says only "public press coverage." Each item on a data scene needs its own source line: publication and date for Lucky Charms, Reese's, KFC, Miffy and The Simpsons.
- 6

Seed 6: "designed to be mixed and matched"

Attributed to TheraBreath but not in the ledger. We need the source.
- 7

The portfolio table

Several variants (Rainforest Mint, Dry Mouth Tingling Mint, the lozenges, gum and kids flavors) have no ledger line. We suggest "TheraBreath product listings, accessed [date]" and a check for renamed or discontinued items.
- 8

Kids flavors on the map

They sit in the adventurous, gentle corner, which is exactly the glowing white space. Our frame plots adult rinses only. Plot kids separately?
- 9

Act IV has no slack

At three minute pitches the act adds up to 30 minutes exactly. We suggest two minute pitches, plus a time bank on Console that shows ahead or behind.

CONFIRMATIONS AND LOGISTICS

From your Section 14, *and from the room itself.*

- 1

People

The final attendee list and roles, and who from TFF travels.
- 2

Darwin

Address, display and inputs, seating, power, guest Wi-Fi, and whether we may present from our own laptop.
- 3

Tasting on site

Is live tasting of rinse prototypes permitted (cups, spit cups, water)? Which four samples, with which codes?
- 4

Flavor School

Alex's sign-off on Scenes 18 to 22, the molecule set and every chemistry fit badge.
- 5

Brand assets

The official TheraBreath logo, including a reversed version for dark scenes, the official orange, and TFF fonts.
- 6

Commitments

The three next steps and their dates for Scene 42, and appetite for Church & Dwight family crossovers (Seed 13).
- 7

Their devices

Church & Dwight phones and guest Wi-Fi may block unknown domains or real-time connections. Could Ross test the join link on a company phone by October 30? We bring a 5G hotspot either way.
- 8

If we present from their PC

The offline build is not available on their machine. We cache the stage in the browser, but our own laptop over HDMI or USB-C is the safer plan.
- 9

Names on the cover

Is Church & Dwight comfortable with attendees listed as co-authors in the Playbook PDF?
- 10

Print

Vendor, quantities and delivery address, plus the vendor's color profile for CMYK files. Final files are due October 28.

WHAT HAPPENS NEXT

Pick a light.
We take it from there.

With a direction and the eight decisions on page 27, we move straight to the full storyboard and the alpha. Everything else on pages 28 and 29 can arrive while we build.

DATE	MILESTONE
SEP 30	This discovery pack: restatement, questions, two directions
OCT 9	Storyboard for every scene in the chosen direction
OCT 16	Alpha: arrival, Scenes 1 to 17, join, live voting, Console basics
OCT 23	Beta: all scenes, tasting, canvas, dot vote, pipeline, Playbook v1
OCT 26	Pulse survey live
OCT 28	Print files to the vendor
OCT 30	Full rehearsal with the simulator, timed
NOV 3	Release candidate, offline build, fallbacks
NOV 6	Content freeze
NOV 9	Live, with us on standby from 9:00
