PRESENTER EDITION · 10:00 TO 12:00 · MONDAY, NOVEMBER 9, 2026 · DARWIN ROOM, PRINCETON

The Future *of Freshness*

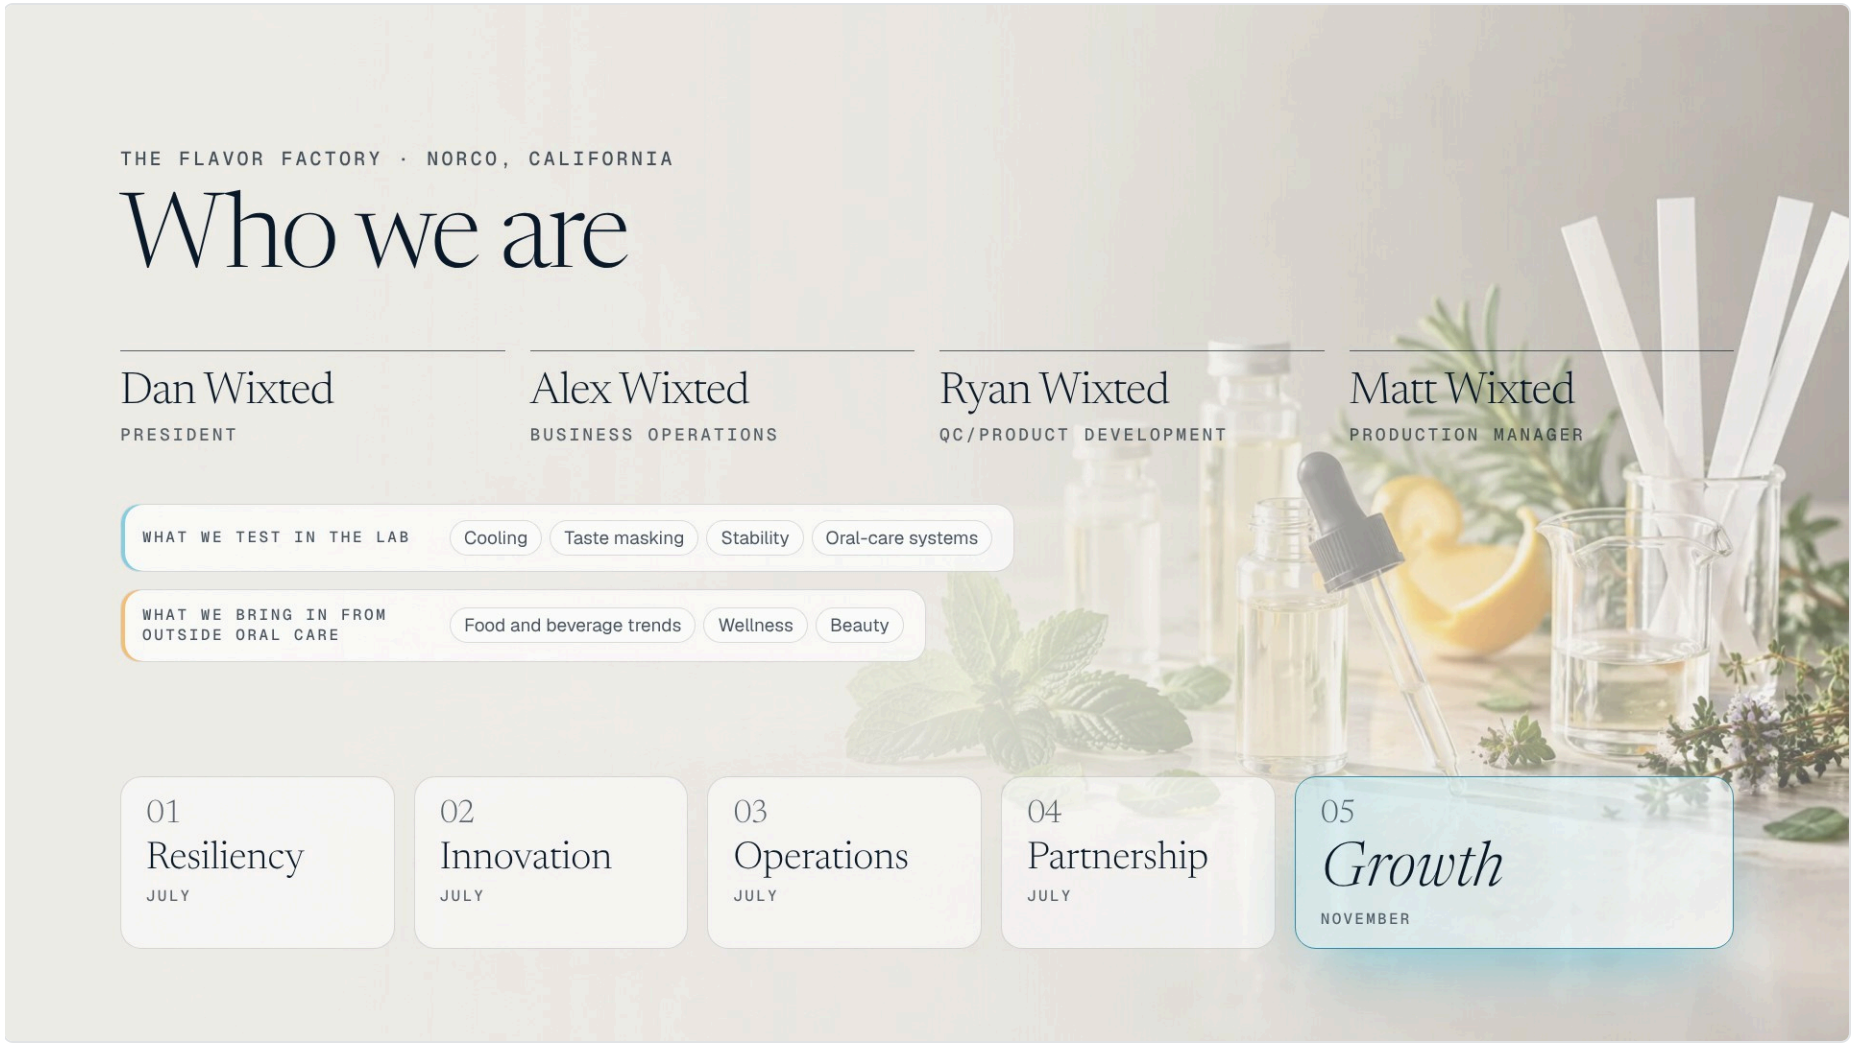

Every slide as it'll look on the TV, with its time and talking points; the slides that change as they build show each state. The morning is a conversation, not a talk: the first slide of each part carries its objective, and most slides end on a question for the room. Phones vote three times (the trends, the tasting and the chips), and everything we decide is tapped in, not typed, and becomes the Playbook at the end. 21 slides, plus "Your pre-brief answers" once the answers are in. The live presentation is at /host, opened from the team link. Use the right arrow or click to go on,] to jump to the next part, S to skip the optional builds, F for full screen and N for the talking points.

TIME	PART	OBJECTIVE	SLIDES
10:00 to 10:10	Welcome, who we are and your four objectives		1 to 4
10:10 to 10:25	What's changing: your portfolio, the market and seven trends	01	6 to 9
10:25 to 10:40	Flavor School, then four directions	02	10 to 13
10:40 to 11:00	A blind tasting in your bases	02	14 to 15
11:00 to 11:20	From samples to concepts	03	16 to 18
11:20 to 11:40	White space, then Now, Next, Later	04	19 to 20
11:40 to 12:00	What we decided and what happens next		21 to 22

Confidential. For The Flavor Factory team; not for distribution.

- At 9:30, Ross is meeting us to help with the Wi-Fi and the room.
- Get the laptop on the TV and press F for full screen. Do the sound check on the rehearsal session before anyone arrives (see the run sheet).
- As people sit down, ask them to scan the code. Their names pop up on screen as they join; nothing shows until the first one does.
- At 10:00, welcome everyone and thank Ross for inviting us.
- Say what the morning is for, then move on: “We brought four samples made in your bases. By noon we’d like to agree what deserves another round, what you’d change and what the next step should be.”
- Anyone who hasn’t joined: scan the code now, for the tasting and the two votes. Don’t explain the technology.
- Then: “First, a quick introduction to the four of us and the work we already do together.”

- About 90 seconds. One plain sentence each: who we are and what we do day to day.
- Say a word about the range of our work: as a wholesale flavor manufacturer we make liquid and powder flavors for just about anything, with a focus on naturally derived flavors. A lot of it is custom work, developed with clients as their own proprietary flavors, and that range feeds what we bring to TheraBreath.
- One line on what we test in the lab and one on what we bring in from outside oral care. The point is the two together, not the list.
- Ross asked to see our creativity, technical expertise and innovation capabilities. This morning is our chance to show all three.
- The next build is the July row, and it’s optional (S skips it). Keep it to one sentence: in Norco in July we talked about resiliency, innovation, operations and partnership, and today is about growth.
- Then: “Some of that work is already in your range.”

THE FLAVOR FACTORY IN THERABREATH

Our flavors are in 14 TheraBreath rinses on shelf today.

ORAL RINSES

Clean Mint — Healthy Gums
Dazzling Mint — Whitening, Fresh Breath
Invigorating Icy Mint — Fresh Breath
Mild Mint — Fresh Breath
Chamomile Mint — Overnight
Peppermint Vanilla — Fresh & Festive
Rainforest Mint — Fresh Breath
Revitalizing Mint — Complete
Sparkle Mint — Anticavity
Tingling Mint — Dry Mouth

KIDS RINSES

Bubblegum Blast — Kids Anticavity
Grapes Galore — Kids Anticavity
Strawberry Splash — Kids Anticavity
Wacky Watermelon — Kids Anticavity

Source: The Flavor Factory portfolio record, November 4, 2026; TheraBreath product photos (therabreath.com, Walmart and Target)

- One minute. Every TheraBreath product on shelf today with one of our flavors in it: ten rinses, Peppermint Vanilla among them, and the four kids rinses. The names are as printed on each bottle, the same ones the shelf uses.
- Don’t read out all 14. Say why it matters: we know a flavor has to work in a real base and a real product, and these do.
- Flavor names only. Usage levels and flavor codes stay off the slide and out of what we say.
- Then: “Ross gave us four clear objectives for the next stage of the work.”

FROM ROSS'S INVITATION

We've built the morning *around your four objectives.*

01

Identifying emerging flavor, sensory, and consumer trends that could influence the future of oral care.

10:10 TO 10:25
WHAT'S CHANGING

02

Exploring new flavor territories and sensory experiences that can differentiate TheraBreath from competitors and create memorable consumer experiences.

10:25 TO 11:00
WHERE FLAVOR COULD GO

03

Developing innovative flavor concepts that unlock new usage occasions, address new consumer segments, and create opportunities for portfolio expansion.

11:00 TO 11:20
WHAT WE COULD MAKE

04

Generating a pipeline of innovation platforms, flavor directions, and white-space opportunities that have the potential to drive incremental growth across the portfolio.

11:20 TO 11:40
WHAT TO DO FIRST

AND THE GOAL BEHIND THEM

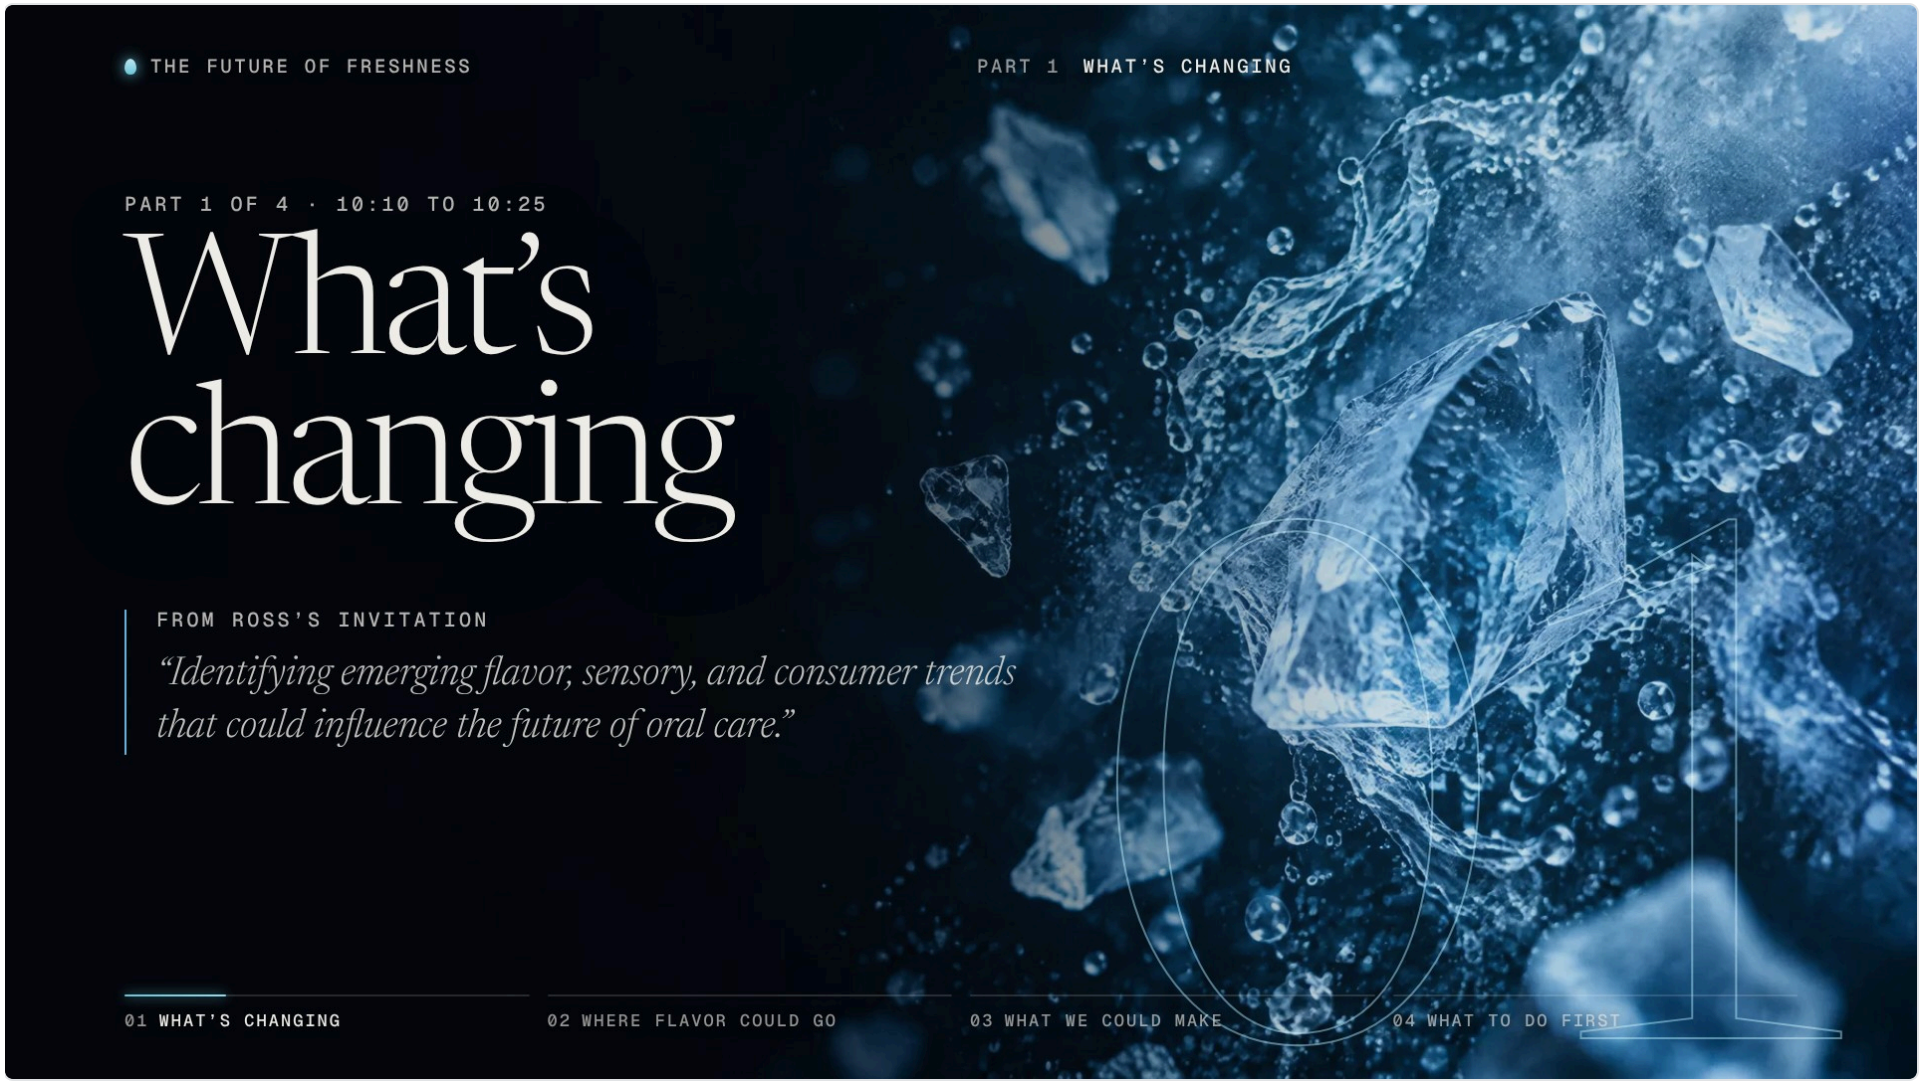

"...new flavor experiences that both *strengthen our appeal with existing loyal users* and *create opportunities to attract new consumers to the franchise.*"

Source: Ross Conroy, Church & Dwight Oral Care R&D, workshop invitation, September 18, 2026

- About a minute. All four are on screen in Ross's words, and each part opens on its own objective again, so don't read them all aloud.
- Say it plainly: "We built the morning around these four objectives: what's changing, where flavor could go, what we could make and what to do first."
- The next build is his goal. Keep both halves in view all morning: loyal users and people who don't buy TheraBreath yet. Nothing we score today measures either one.
- Ask: "Is there anything critical we should add?"
- Then: "Your pre-brief answers give us a place to start."

This slide shows up once at least one pre-brief answer is in (the pre-brief went out on November 3). It opens on who they think TheraBreath's next flavor should be for, then the moment TheraBreath is missing with their own taste in freshness, then what would feel off-brand, all without names. Until then the presentation goes straight from 4 to 6.

- These are their pre-brief answers: who they think TheraBreath's next flavor should be for, and the moment TheraBreath is missing. Say how many answers there are. It's a starting point for the conversation, not consumer research.
- A tie is a tie: tied answers light up together. Explore the off-brand answers rather than treating them as a veto list. There are no names on screen.

- Part 1 of 4, 10:10 to 10:25. Ten or fifteen seconds is enough: Ross’s objective is on screen in his words, and the room saw all four on slide 4, so don’t read it out.
- Say: “First, what’s changing, and which of those changes deserves our attention for TheraBreath?”
- Then click on: “The household numbers give us a useful starting question.”

- It opens on one line. Give it a second to land: TheraBreath built a strong position on a rinse without the burn. The next job is giving more people a reason to want it.
- Next build: the glasses fill. Out of every 100 households, 65 buy mouthwash and 14 buy TheraBreath. Every number on this slide is households out of 100.
- Say it, it isn't on screen: TheraBreath reached a record 26.8% of mouthwash sales in Q3 2026, number 2 in the category (Church & Dwight's Q3 call, October 30). That's share of sales, a different measure from households, so keep it off the screen.
- Next: the 100 split into three groups. 14 buy TheraBreath, 51 buy mouthwash but not TheraBreath and 35 don't buy mouthwash. The 35 are households that didn't buy mouthwash in the period these figures cover, not people who reject it or have never used it.
- Last build: flavor could give more of these households a reason to try it. The numbers don't say flavor is why people don't buy. Then: "These figures point to three different jobs: giving loyal users something new, persuading people who buy another brand and understanding why some households don't buy mouthwash. Which should the next flavor focus on first?" The 14 are a fair answer too: Ross's goal includes loyal users.
- The glasses are drawn live on the laptop. Check they show on the presenting laptop and TV during setup; the PDF has them as a still.

THE FUTURE OF FRESHNESS

PART 1 **WHAT'S CHANGING**

OUT OF EVERY 100 HOUSEHOLDS

TheraBreath is already number 2 in mouthwash.

14	buy TheraBreath
51	buy mouthwash, not TheraBreath
35	don't buy mouthwash

Flavor could give more of these households a reason to try it.

FOR THE ROOM

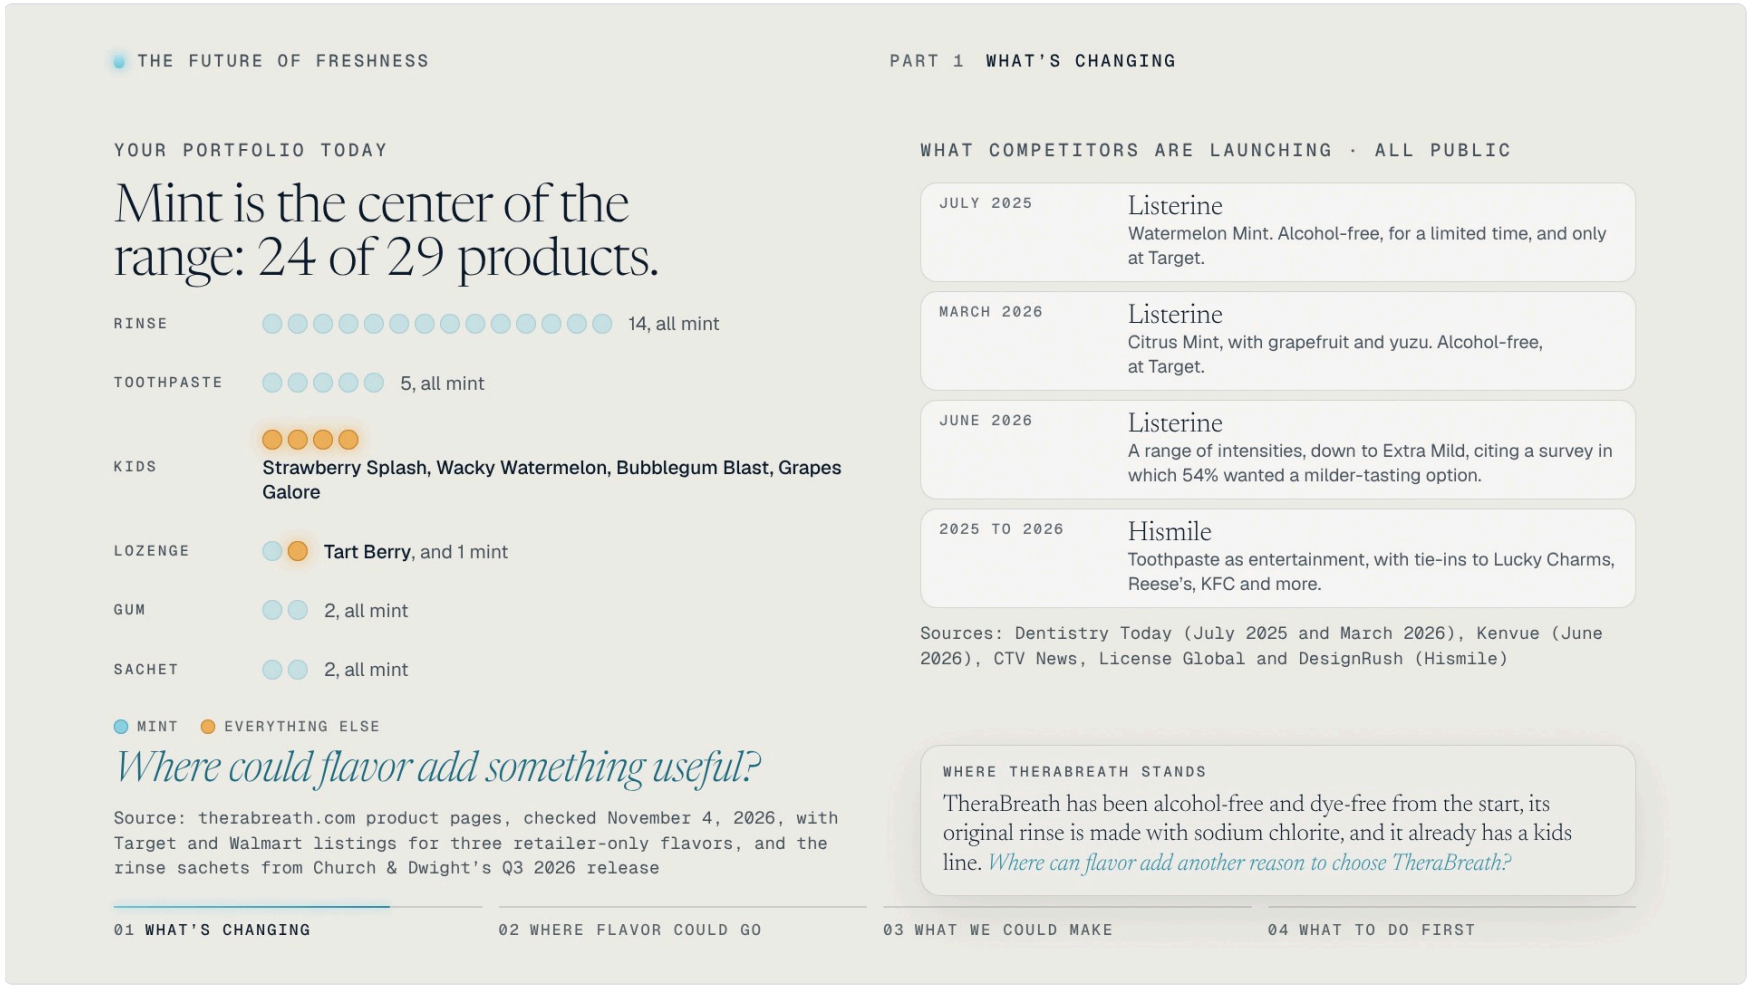

Which should a new flavor focus on first: the 14, the 51 or the 35?

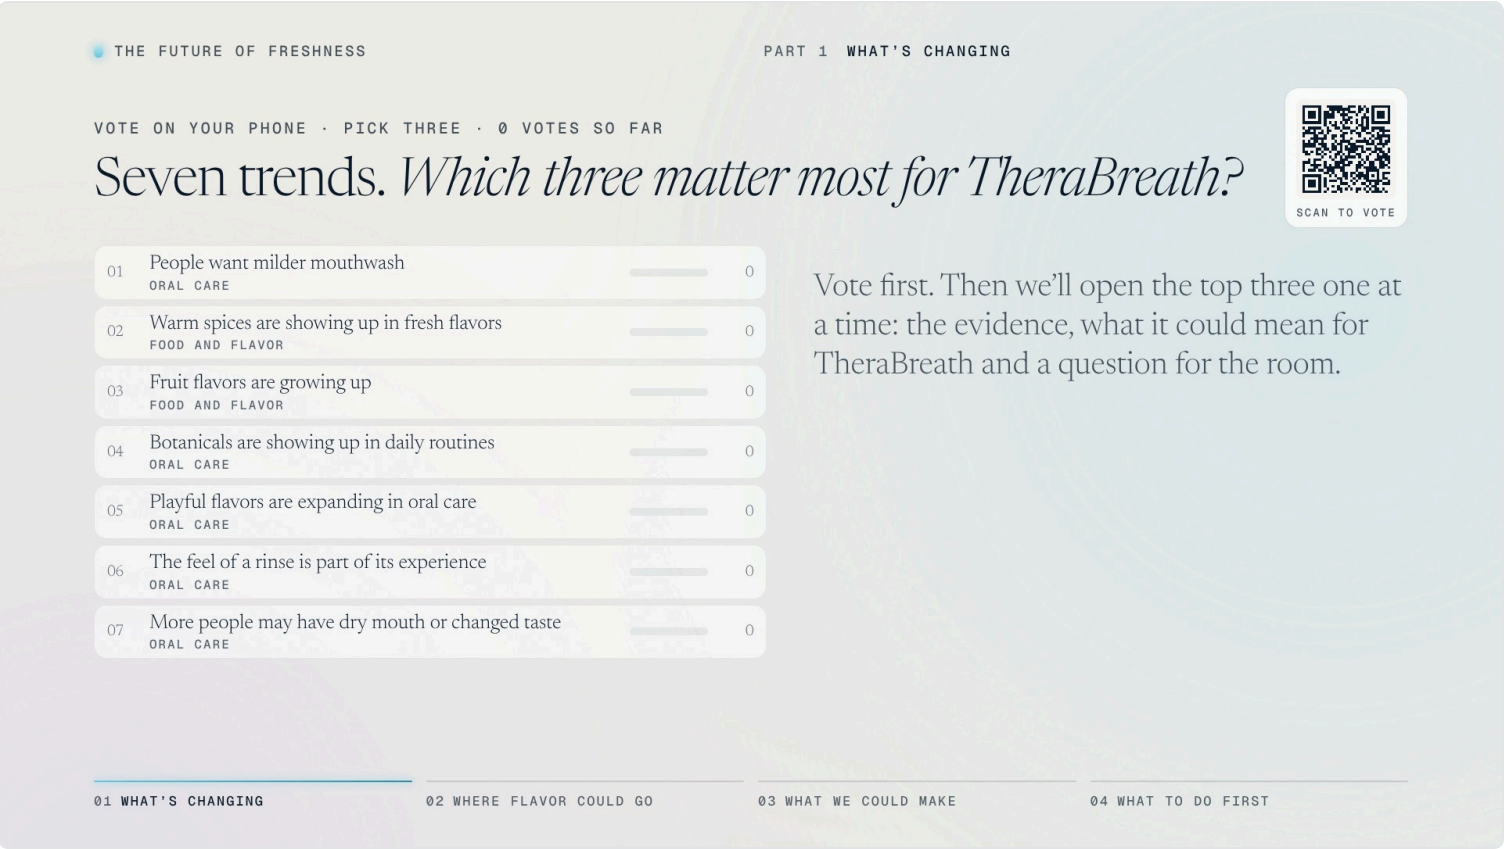

65
OF 100 BUY MOUTHWASH

14
OF 100 BUY THERABREATH

Source: Church & Dwight Q3 2026 earnings call, October 30, 2026.
Household penetration: TheraBreath 14%, mouthwash 65%

- Mint is the center of the range: 24 of 29 products are mint, across six formats, and that's a strength. Each dot is one product, so a flavor sold as a rinse and a toothpaste counts twice; say products, not flavors. Only the 5 that aren't mint are named: Strawberry Splash, Wacky Watermelon, Bubblegum Blast, Grapes Galore, Tart Berry. From therabreath.com, checked November 4, plus three retailer-only flavors and the two new rinse sachets from C&D's Q3 release.
- Ask them to correct anything we have wrong about the range, thank them and move on. The Q3 release calls the new toothpaste line four variants; the site listed five on November 4.
- Next to them is what competitors have launched: product, timing and positioning only, nothing about how well it sold. TheraBreath does this too: Eucalyptus Mint, only at Target since March 2026, and Peppermint Vanilla at Target.
- Next build: where could flavor add something useful?
- Last build: where TheraBreath stands: alcohol-free and dye-free from the start, an original rinse made with sodium chlorite, and a kids line. Then ask: TheraBreath already stands for a comfortable rinse. Where could a new flavor give people another reason to choose it?

- Before the vote, one sentence on each headline, about a minute in all. Say: “These come from different kinds of evidence. Some are already in oral care; some are ideas from food and flavor. Pick the three that would be most useful for us to discuss. The vote sets our focus; it doesn’t decide which ideas are right.”
- Then phones out. Everyone picks three. Hand votes go in from the presenter view.
- The bars fill as votes land. Give it about two minutes, then click: the vote closes and the top three open one at a time. Going back to the first build opens the vote again.
- For each of the three: the evidence, what it could mean for TheraBreath and its question. The label says whether the evidence comes from oral care itself or from food and flavor more widely: a food trend is a cue to discuss, not proof that people want it in a mouthwash.
- About two minutes on each of the three. The top three go into the Playbook.
- Keep each trend to what its evidence shows. The food and flavor ones are inspiration, not proof of demand in a rinse, and a competitor launch shows activity, not that it worked. If dry mouth comes up, keep it to making the experience pleasant for a defined group: no treatment benefit, and ask what user research we’d need before writing a brief.
- Say the vote picks what we discuss today. It doesn’t prove a trend. Equal votes share a place (Tied for second), and if a tie puts more than three trends in the top three places, the screen says so: ask the room which three to open. If no votes come in, the first three show as topics to discuss, not as a result.
- Then ask out loud, it’s not on screen: What are you seeing that we missed?
- If one of the other four comes up, here’s its evidence:
- 1. People want milder mouthwash. In a survey Kenvue cites (2024, US, ages 15 and over), 54% were looking for a milder-tasting option. Listerine now sells a range of intensities, down to Extra Mild. What it could mean: Let people choose how strong they want it. Its question: Is “milder” a flavor job, a cooling job, or both?

- 2. Warm spices are showing up in fresh flavors. Frosted Star Anise is dsm-firmenich's 2026 Flavor of the Year. In its own Emotion360 global survey, two in three consumers recognized star anise, but only 34% had tasted it. Kerry's 2026 charts call out sweet heat, or "swicy." What it could mean: There could be room for a warm, spiced flavor for adults, as long as it still finishes cool. Its question: Would a warm note read as fresh to a TheraBreath user, or as off-brand?
- 3. Fruit flavors are growing up. Black Currant is McCormick's 2026 Flavor of the Year. Kerry names dragon fruit among the flavors to watch in 2026, alongside florals like hibiscus and orange blossom. What it could mean: Fruit-forward mints, made with adults in mind. Its question: Which fruit notes could sit next to mint without reading as a kids' product?
- 4. Botanicals are showing up in daily routines. TheraBreath's Eucalyptus Mint and Overnight Chamomile Mint are already on shelf. Both lead with a botanical, and one is named for a time of day. The "Swishy Time" campaign framed rinsing as a small self-care ritual while TheraBreath's share was growing. What it could mean: Flavors made for a particular time of day, like first thing in the morning or right before bed. Its question: Which moment of the day could a botanical own?
- 5. Playful flavors are expanding in oral care. Perfumer & Flavorist's April 2026 review of oral care names fun flavors, brand tie-ups and functional confectionery among the forces behind new products. Hismile sells candy-brand toothpaste, such as its Chupa Chups line. What it could mean: A sweeter start can work, as long as the finish is clean. Its question: Where is the line between fun and too sweet for TheraBreath?
- 6. The feel of a rinse is part of its experience. Symrise launched Optacool Fuji for oral care, promising a quick burst of freshness and long-lasting cooling (Symrise's own claim). Mouthfeel is what you feel, not taste: cooling, tingle, warmth, smoothness. It shapes perceived freshness, but it doesn't measure efficacy. What it could mean: Design the feel on purpose: how fast it cools, how long it lasts and how it finishes. Its question: What should TheraBreath feel like in the first ten seconds, and after a minute?
- 7. More people may have dry mouth or changed taste. About 1 in 8 US adults said in late 2025 that they currently take a GLP-1 drug. That counts use, not dry mouth. CareQuest Institute advises dental teams to ask about GLP-1 use: dry mouth has been reported, and research on oral effects is still early. What it could mean: A flavor that stays pleasant for people with a dry mouth or changed taste could be worth exploring, without any health claim. Its question: What would a flavor need to do to stay pleasant in a dry mouth, and what could we never claim?

THE FUTURE OF FRESHNESS

PART 1 WHAT'S CHANGING

NO VOTES CAME IN · THREE TRENDS TO DISCUSS

Seven trends. *Which three matter most for TheraBreath?*

SCAN TO VOTE

06	The feel of a rinse is part of its experience ORAL CARE		0
07	More people may have dry mouth or changed taste ORAL CARE		0

TO DISCUSS · TREND 1 OF 7 · SEEN IN ORAL CARE

People want milder mouthwash.

In a survey Kenvue cites (2024, US, ages 15 and over), 54% were looking for a milder-tasting option.

Kenvue press release, June 2, 2026 (the 54% figure: Kenvue / Suzy survey, 2024, n = 1,019)

Listerine now sells a range of intensities, down to Extra Mild.

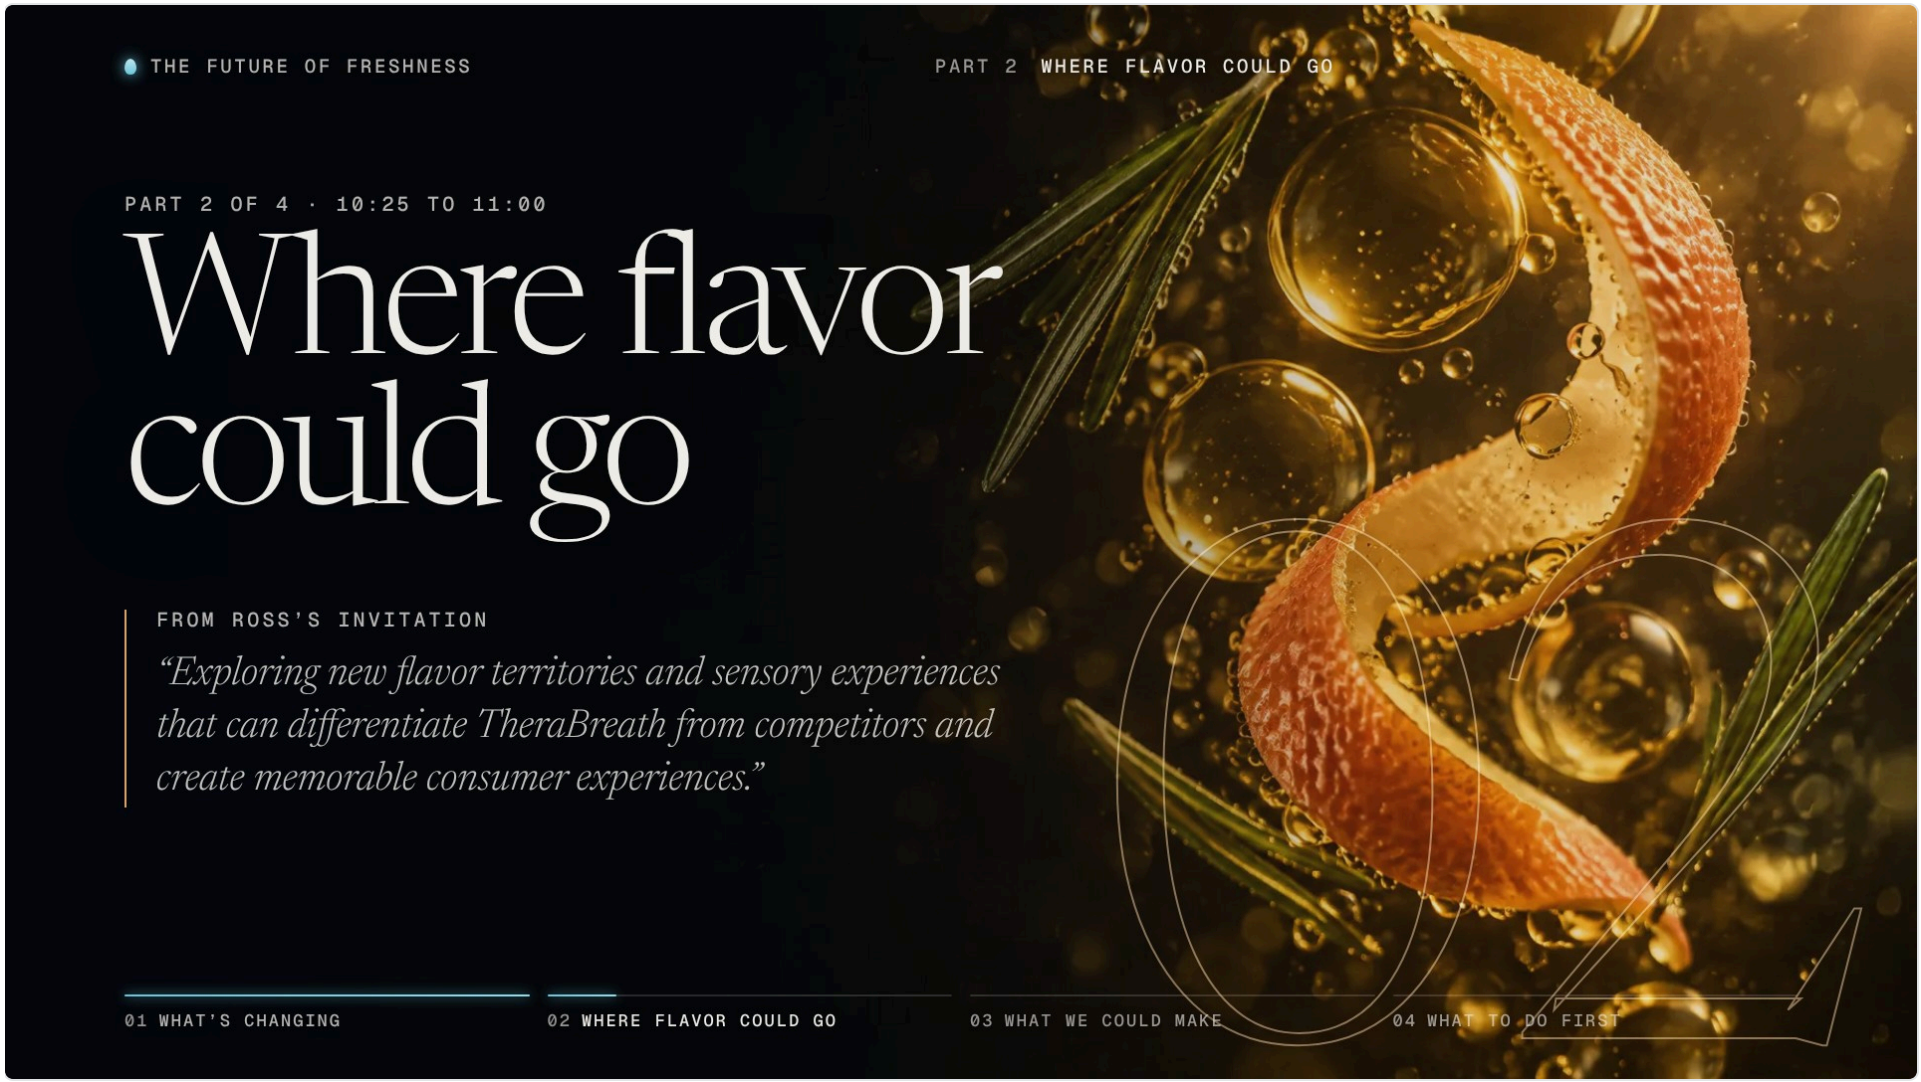

Kenvue press release, June 2, 2026 (the 54% figure: Kenvue / Suzy survey, 2024, n = 1,019)

WHAT IT COULD MEAN FOR THERABREATH

Let people choose how strong they want it.

FOR THE ROOM

Is "milder" a flavor job, a cooling job, or both?

- Part 2 of 4, 10:25 to 11:00. Ross's second objective: Exploring new flavor territories and sensory experiences that can differentiate TheraBreath from competitors and create memorable consumer experiences.
- This part is Flavor School, the four directions, the film and the blind tasting.

- One slide, three builds, about four minutes: three things to know about flavor in a TheraBreath rinse.
- It opens on what flavor is: flavor combines taste, aroma and mouthfeel. Taste is the tongue: sweet, sour, salty, bitter, umami. Aroma reaches the nose from the mouth as well as from sniffing. Feel is cooling, tingle and warmth, like the coolness of mint. No percentages: we don't say how much of flavor is smell.
- Next build: cooling has an onset and a linger, and we can work on both. The curves are drawn to explain the idea. They aren't measured, they aren't these samples, and the axis has no times on purpose. Cooling is a sensation, not proof that a rinse works.
- Last build: the flavor has to work in the actual base, from the first rinse through shelf life. What we do: choose compatible materials, work on incorporation and protection, and check stability in the agreed base. Anything that would change the base itself, such as its pH, is C&D's call, so don't say we control it. Whatever direction we take, the finish needs to feel clean.
- Stick to public chemistry. No formula details, and no story about how sodium chlorite works in their bases: they know their bases better than we do.
- Ryan signs off this slide and these notes together before the day.
- Then ask: Where has flavor been hardest to get right with sodium chlorite for you?
- Texture and temperature change how a flavor comes across too, so all four samples should be served the same way.
- Everyone tastes a little differently. Our genes set how sensitive we are to bitterness, taste gets less sensitive with age, and what we grew up eating shapes what we like. So expect the scores to spread, and treat that as useful.

THE FUTURE OF FRESHNESS

PART 2 WHERE FLAVOR COULD GO

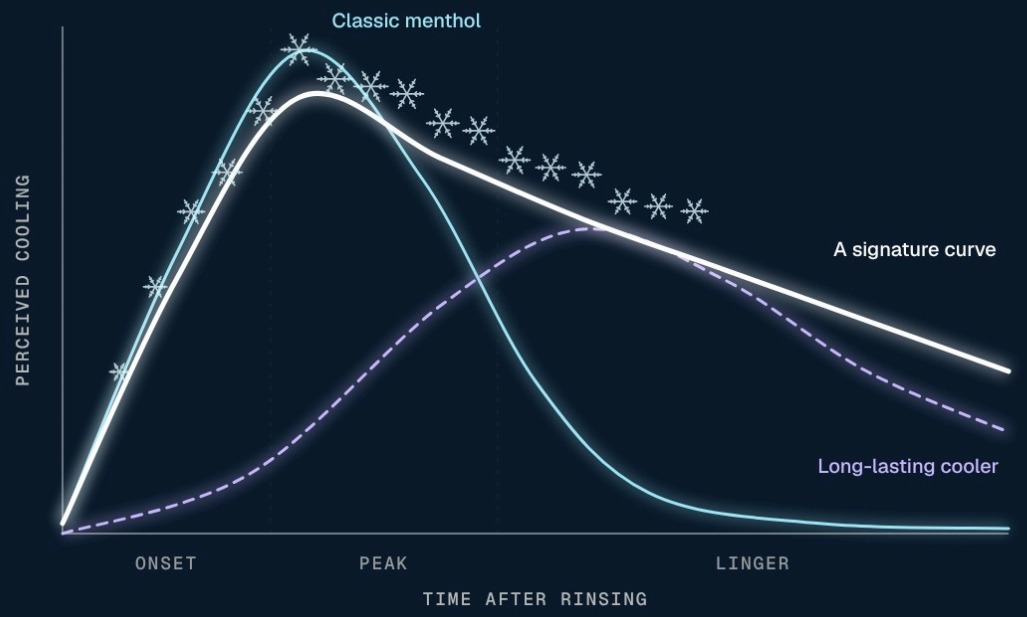

FLAVOR SCHOOL · THREE THINGS TO KNOW

01 TASTE, AROMA AND FEEL | 02 COOLING | 03 SODIUM CHLORITE

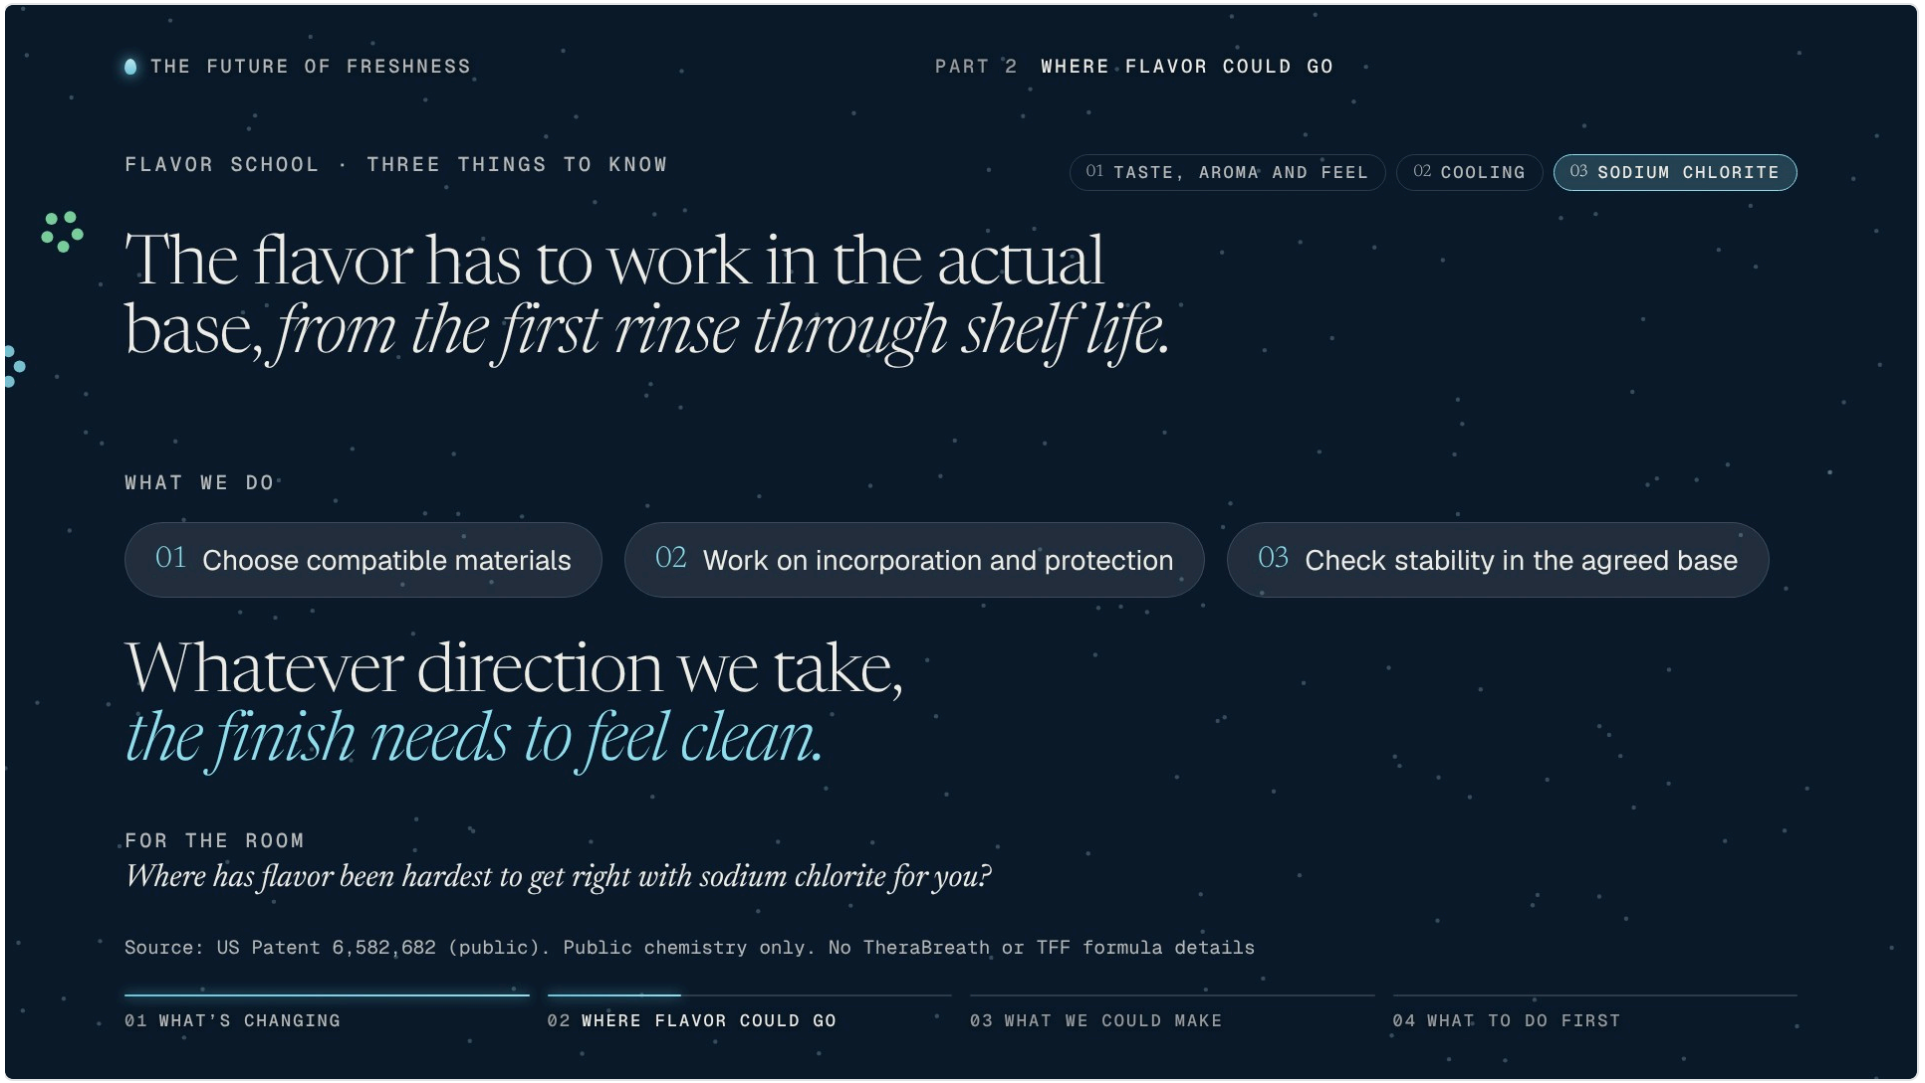

Cooling does two jobs.

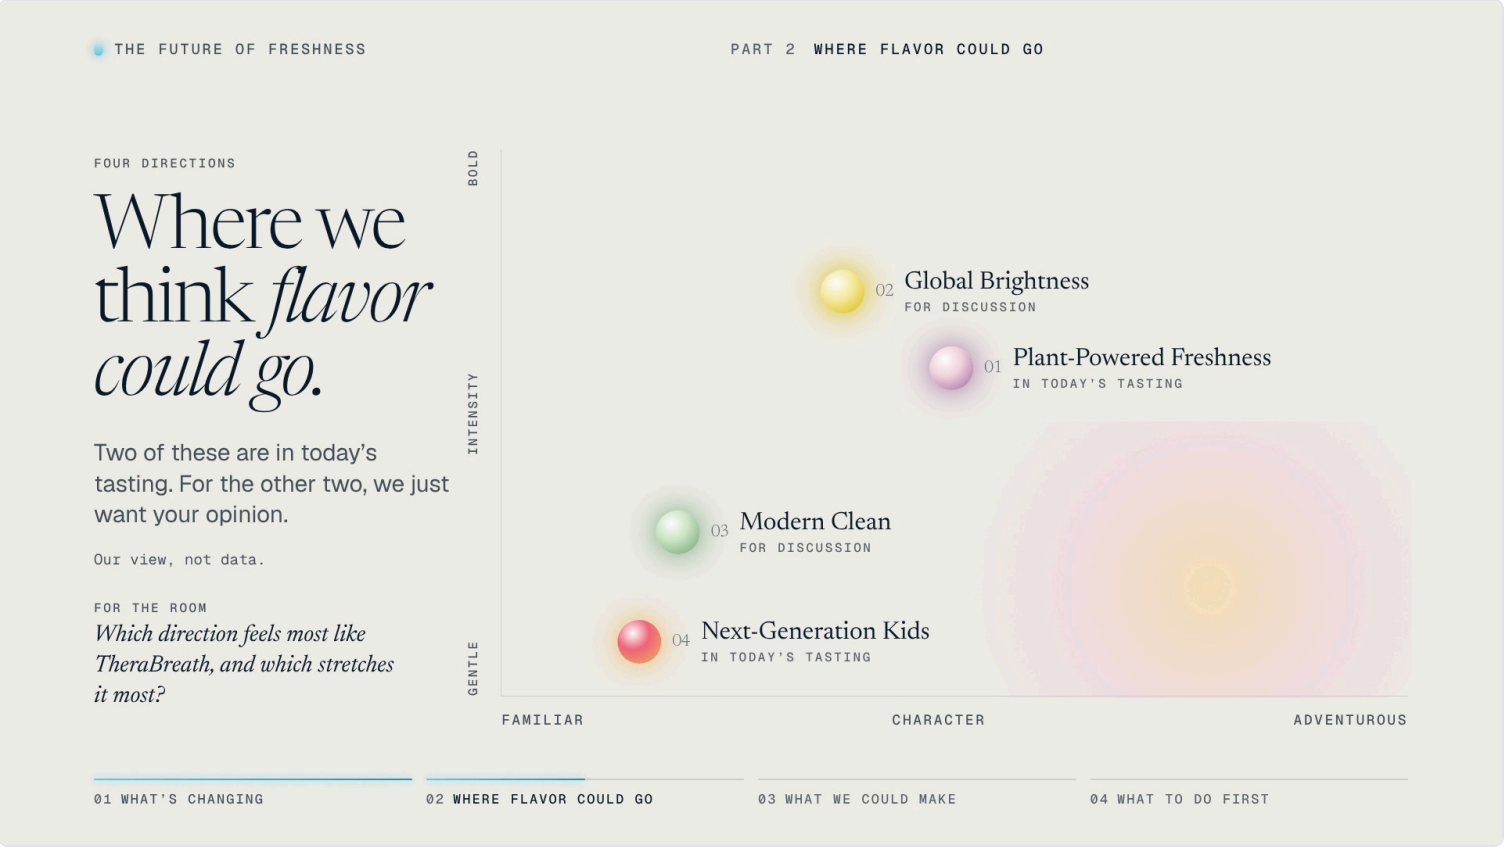

Cooling has an onset and a linger. We can work on both.

Drawn to explain the idea. Not measured, and not these samples.

- Four directions on one map, from familiar to adventurous and from gentle to bold. It's our view, not data.
- The gentle, adventurous corner is where we think new users could come from. Two of these are in today's tasting.
- Ask: Which direction feels most like TheraBreath, and which stretches it most?
- Click a direction on the TV, or use the buttons in the presenter view, to open its profile card: the flavor arc, what it tastes like and who it's for. Click it again to go back to the map. The arrows step through the four in order.
- Global Brightness and Modern Clean aren't in the tasting. Their cards are optional, and S skips them.
- Plant-Powered Freshness: Citrus, herbs and a touch of floral, always finished with mint. Two of today's samples come from here. Don't name them yet.
- Global Brightness: Citrus people already know, taken somewhere new. Not in the tasting. We just want their opinion. Ask: Is there a citrus that could sit comfortably next to your mints?
- Modern Clean: Green, gentle freshness for people who find mouthwash too strong. Not in the tasting. We just want their opinion. Ask: Can a gentle flavor still feel fresh enough?
- Next-Generation Kids: Flavors that make kids actually want to rinse. Two of today's samples come from here. Don't name them yet. Ask: Would a mystery flavor get kids more interested in rinsing?
- Running late? The presenter view has a button that skips the film and goes straight to the tasting.

THE FUTURE OF FRESHNESS

PART 2 **WHERE FLAVOR COULD GO**

DIRECTION 1 OF 4 · IN TODAY'S TASTING

Plant-Powered Freshness

Citrus, herbs and a touch of floral, always finished with mint.

THE FLAVOR ARC

FIRST	THEN	FINISH
Citrus	Herbs and florals	Mint

WHAT IT TASTES LIKE

It opens bright with citrus and herbs and finishes on mint.

We'll tell you which samples these are after the tasting.

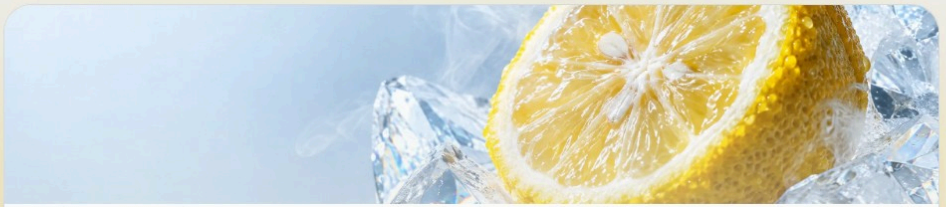

WHO IT'S FOR

Adults who'd like something besides straight mint.

THE FUTURE OF FRESHNESS

PART 2 **WHERE FLAVOR COULD GO**

DIRECTION 2 OF 4 · FOR DISCUSSION

Global Brightness

Citrus people already know, taken somewhere new.

THE FLAVOR ARC

FIRST	THEN	FINISH
Citrus	Yuzu	Cold and clean

WHAT IT TASTES LIKE

A burst of citrus, then a cold, clean finish.

WHO IT'S FOR

Morning rinsers, people heading out the door, and markets outside the US.

THE FUTURE OF FRESHNESS

PART 2 **WHERE FLAVOR COULD GO**

DIRECTION 3 OF 4 · FOR DISCUSSION

Modern Clean

Green, gentle freshness for people who find mouthwash too strong.

THE FLAVOR ARC

FIRST	THEN	FINISH
Cucumber	Green tea	Soft cooling

WHAT IT TASTES LIKE

Soft cooling, a few green notes and a calm finish.

WHO IT'S FOR

People who skip mouthwash because they find it too harsh.

THE FUTURE OF FRESHNESS

PART 2 **WHERE FLAVOR COULD GO**

DIRECTION 4 OF 4 · IN TODAY'S TASTING

Next-Generation Kids

Flavors that make kids actually want to rinse.

THE FLAVOR ARC

FIRST	THEN	FINISH
Fruit	Sweet	Clean

WHAT IT TASTES LIKE

Fruity and fun. We especially want your read on the sweetness and the finish.

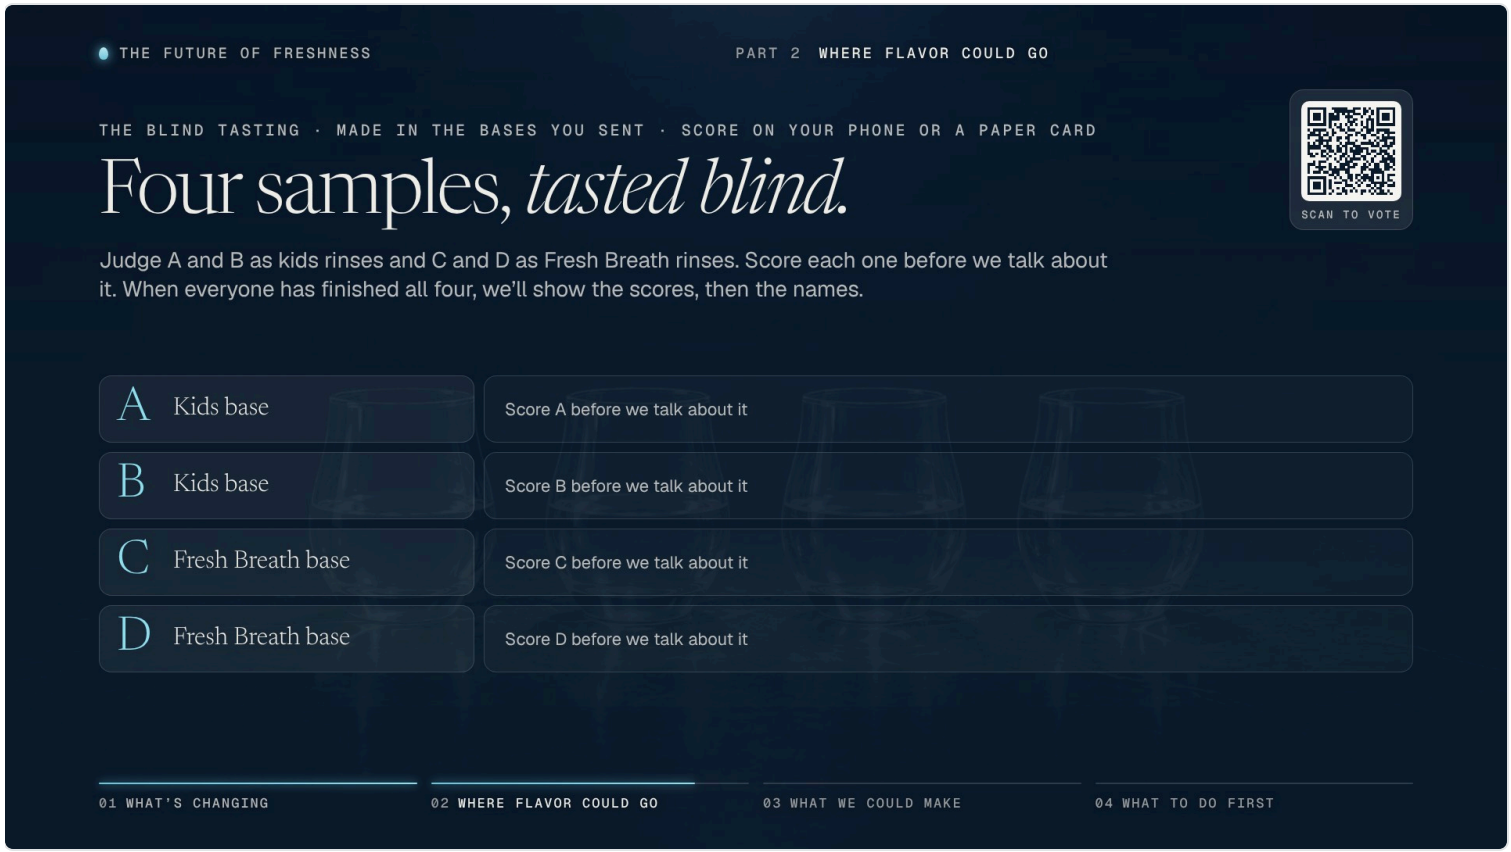

We'll tell you which samples these are after the tasting.

WHO IT'S FOR

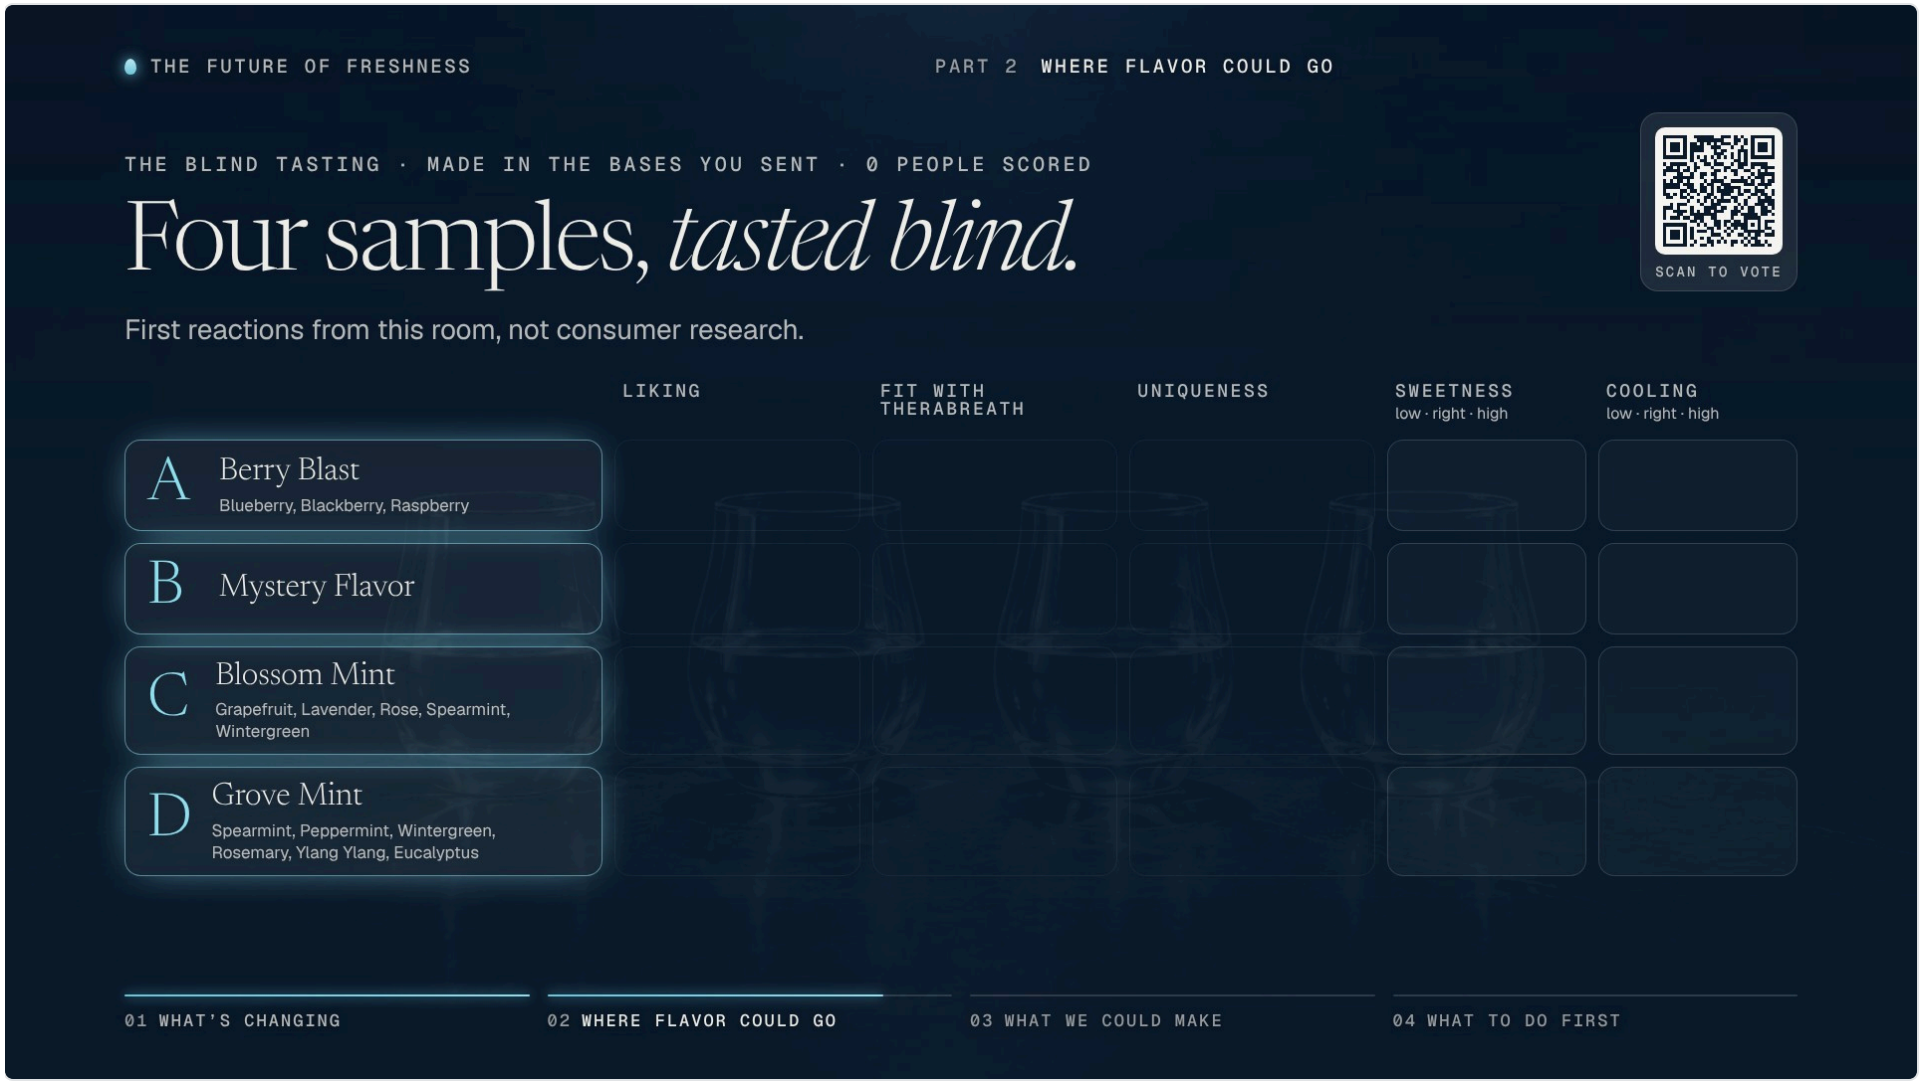

Kids and their parents. We haven't tested it with consumers yet.

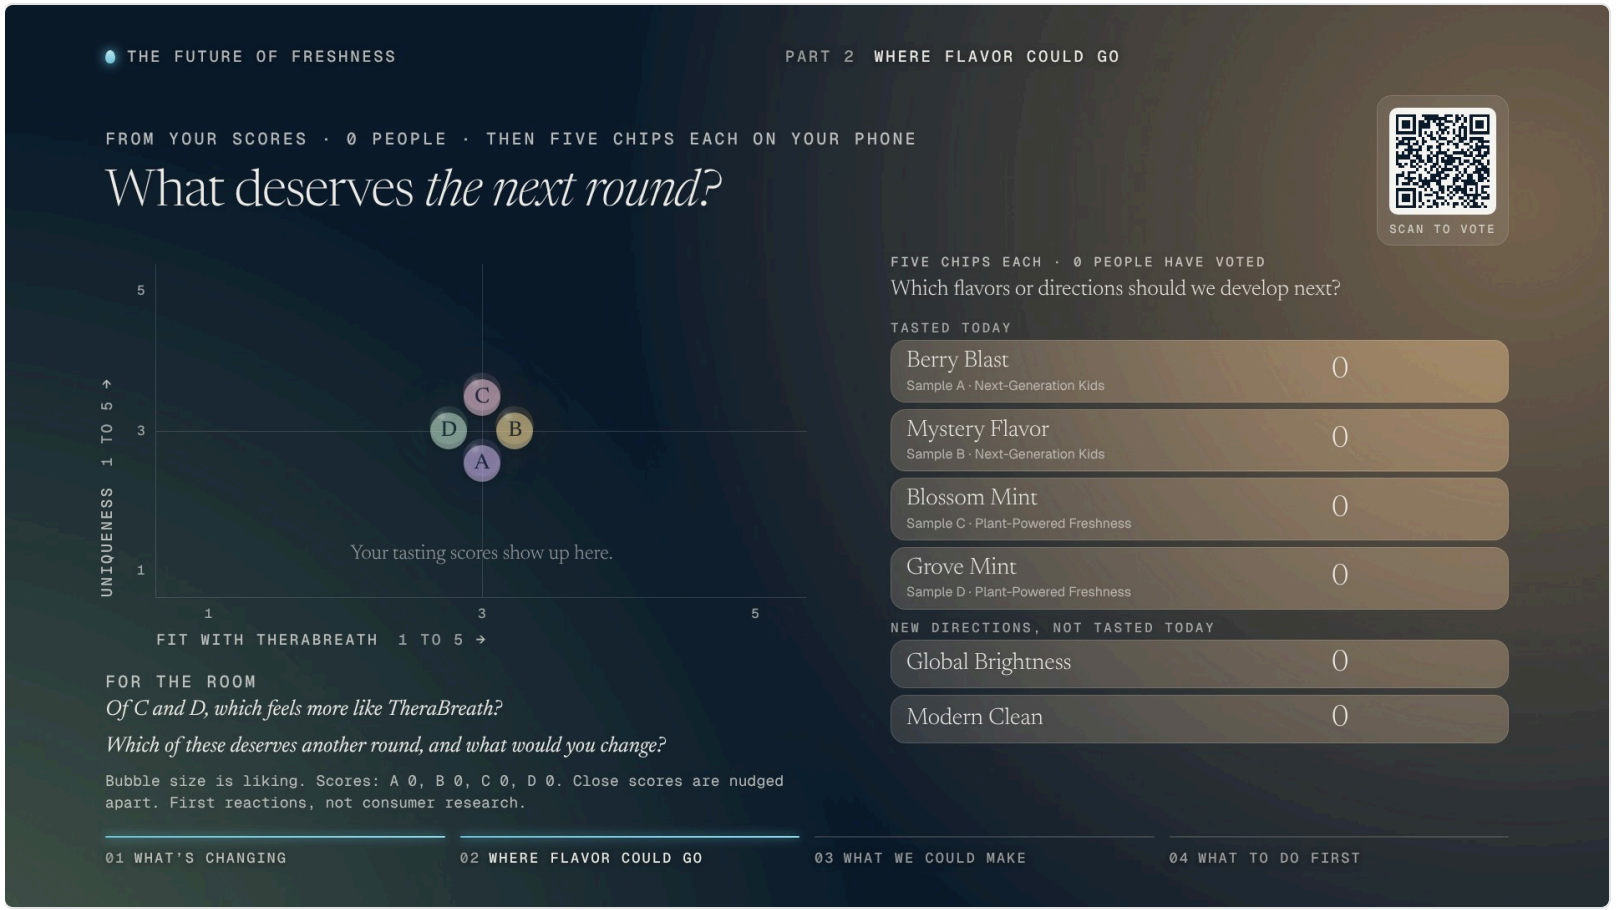

- At 10:37, right after the four directions: lights down and sound up. THE FLAVOR RACE runs 2:24. Don’t announce it. The tasting starts at 10:40.
- Its flavor montage shows the flight’s own fruits, the Mystery Flavor’s among them, so the guesses won’t be fully blind. Treat it as a hint and let the room have fun with it.
- Space or K pauses and plays, and R starts it again. The presenter view has the same buttons and the film’s clock.
- Don’t talk over it. When it ends, the closing card stays up: lights up, bring out the samples, and Next goes to the tasting. Running late? Skip it: the right arrow or] goes straight to the tasting.

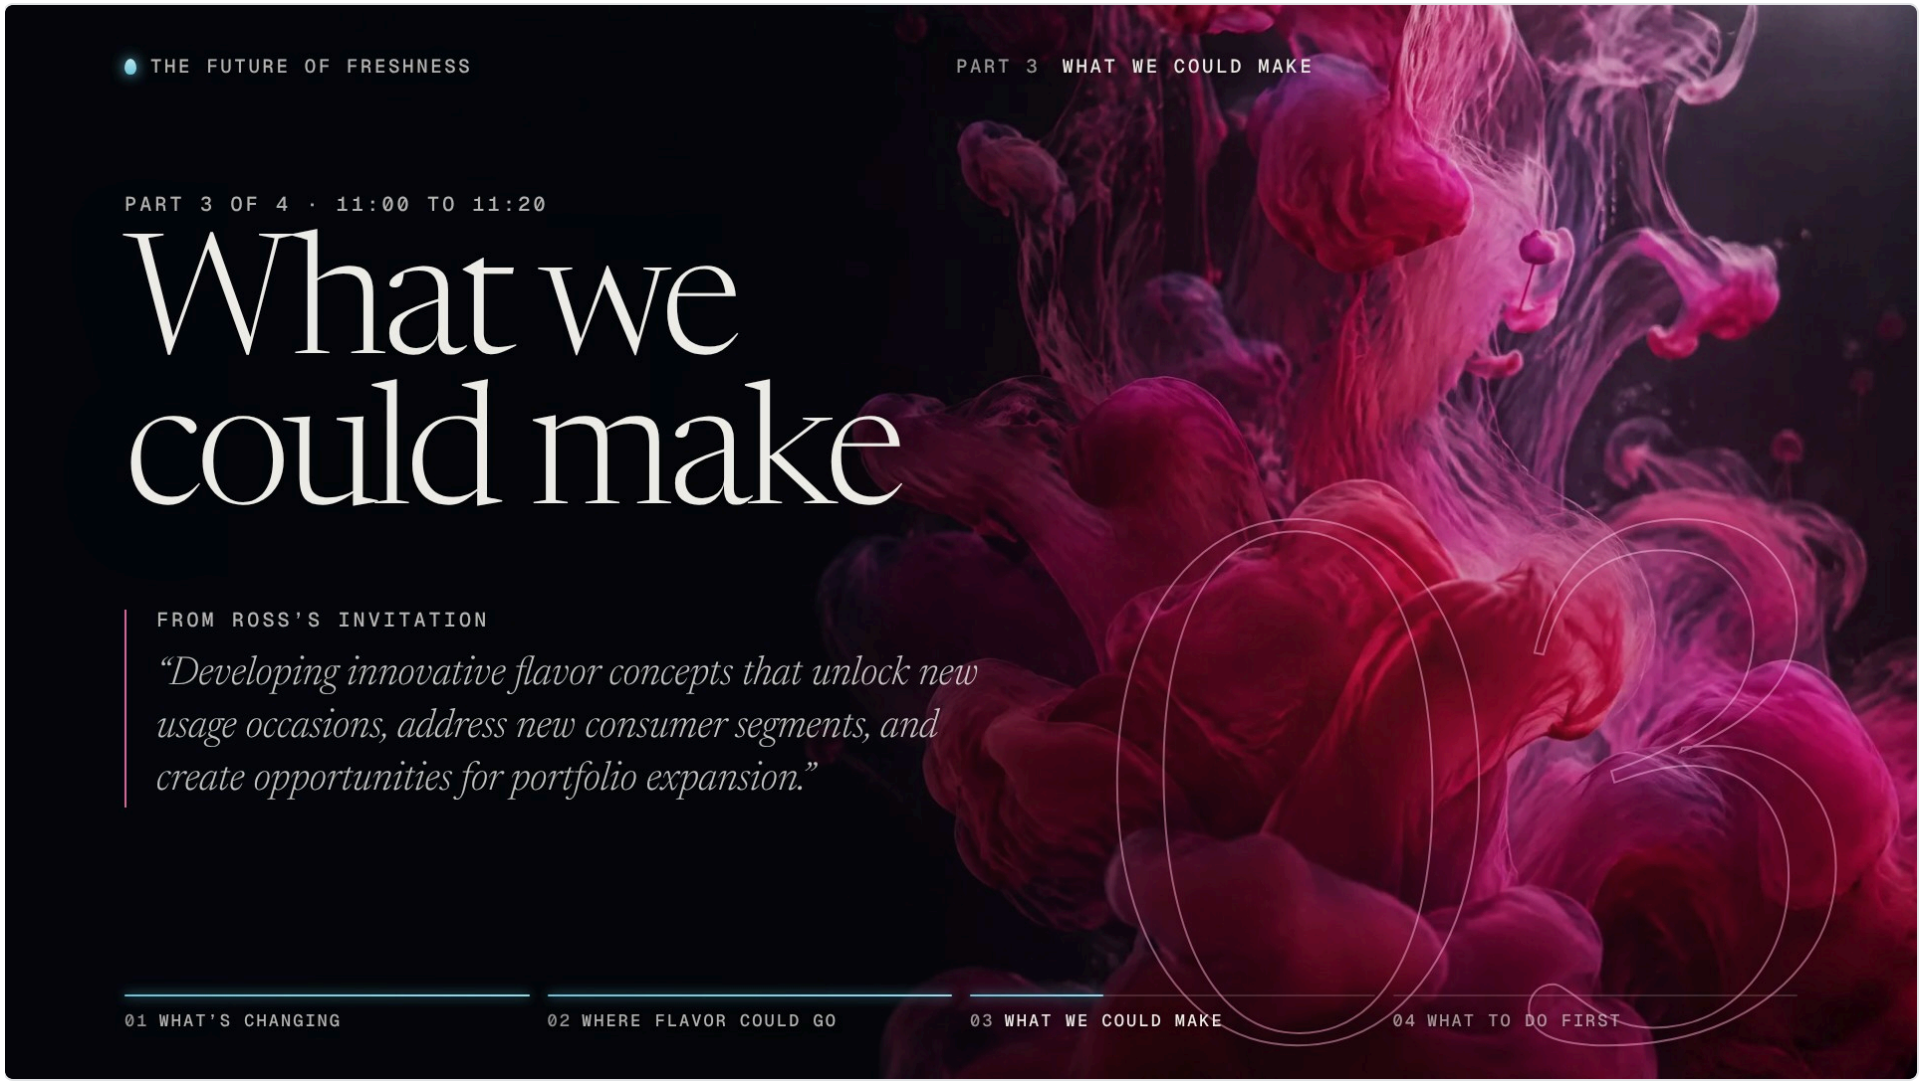

- Phones out, or paper cards for anyone who prefers them. Score each sample as you go: how much you like the flavor, how well it fits TheraBreath, and how different it is from current mouthwash flavors, each from 1 to 5, then whether the sweetness and the cooling are not enough, just right or too much. One word is optional. As each paper card comes in, tap +1 paper card in the presenter view. We type the cards in after the morning.
- A and B are in the Kids base, and C and D are in the Fresh Breath base. We start with the Kids samples.
- B is the Mystery Flavor. Have everyone write down the fruits they get before we move on.
- Leave time for water and a pause between samples. Remind everyone these are first reactions, not consumer research.
- Say: These are first reactions from this room. Judge A and B as kids-rinse concepts and C and D as Fresh Breath concepts. Score each one before we discuss it. Use water between samples as directed. When everyone has finished all four, we'll show the scores, then the names.
- While they score, the screen shows only how many have finished all four and how many have scored each sample. The averages stay off the screen so nobody still scoring is swayed. The presenter view shows the same count.
- Build 1 puts the scores up (with how many scores each sample has, and every sweetness and cooling answer as low, right, high) with their words and fruit guesses, and closes scoring on the phones. If anyone is still scoring, the first press says how many; press again within ten seconds to go on.
- If paper cards are still to be typed in, the screen says the scores are phone scores only. Ask the people on paper what they thought before the chips go in.
- Build 2 reveals the names.

04 WHAT TO DO FIRST

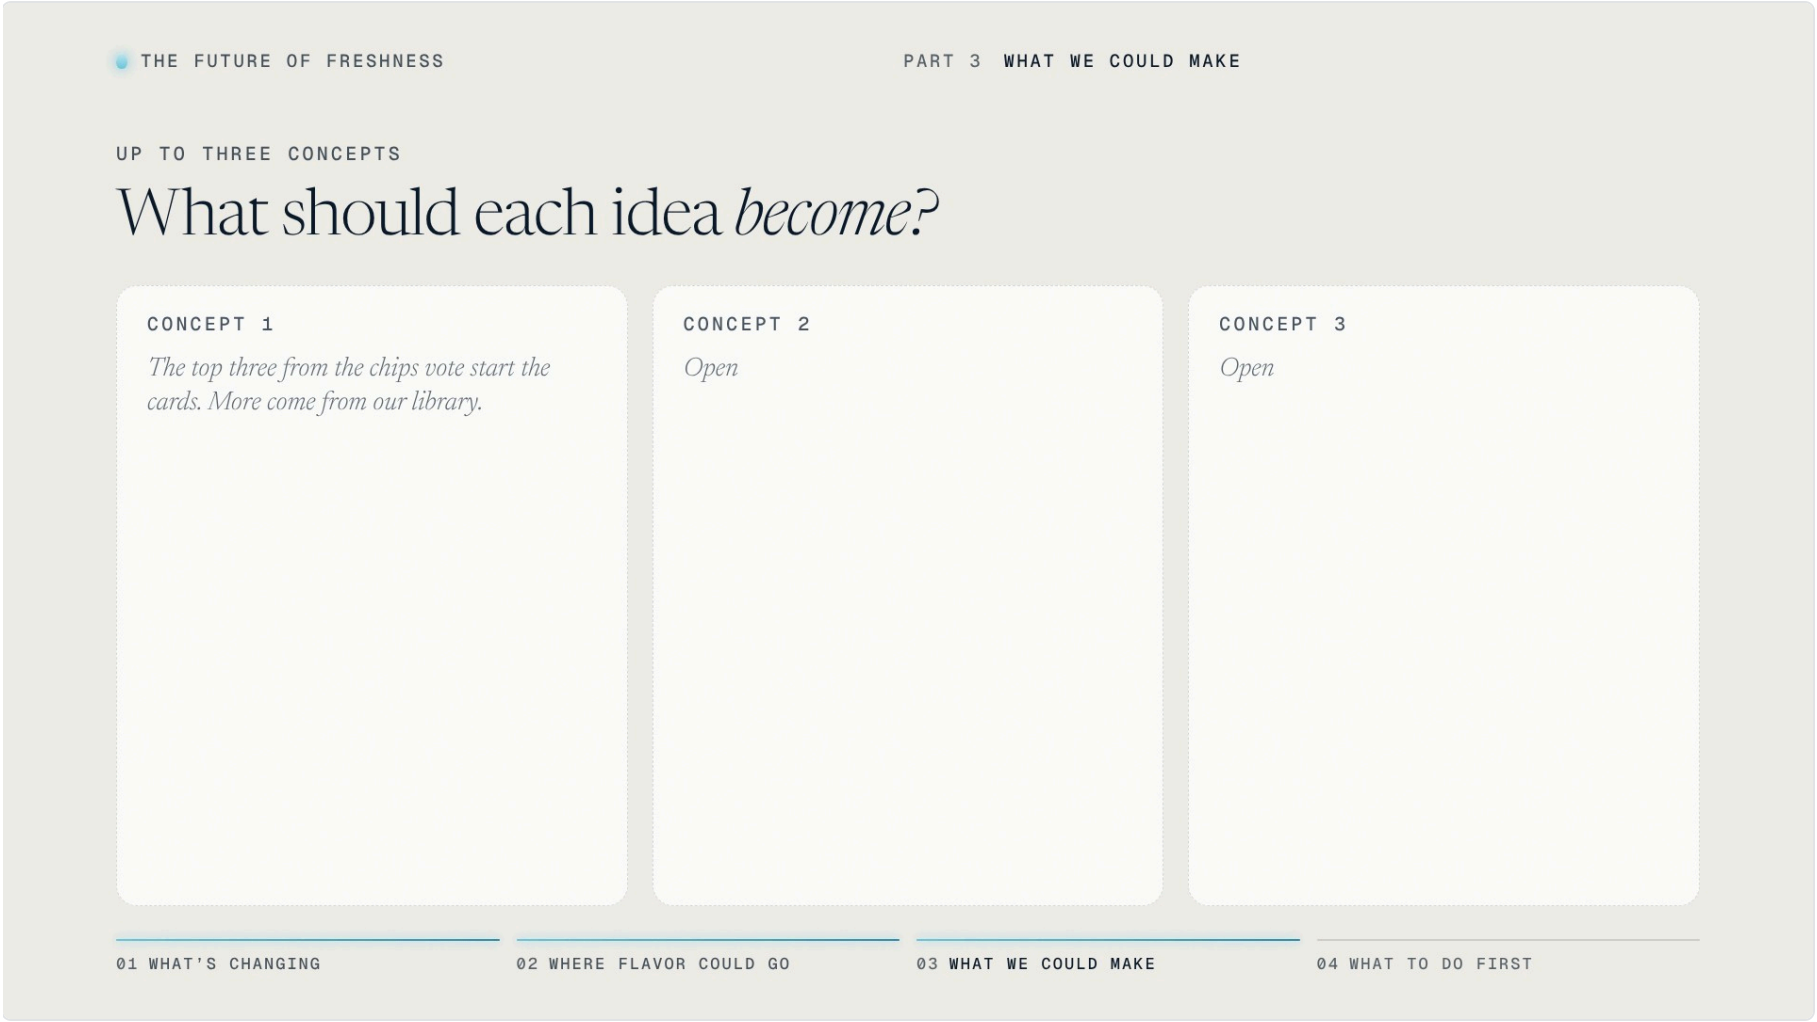

- The bubble chart comes straight from their scores, on the 1 to 5 scale as collected. Across is fit with TheraBreath (how well it fits TheraBreath), up is uniqueness (how different it is from current mouthwash flavors), and the size of each bubble is how much they liked it. The key under it gives how many scores each sample has.
- These scores don't measure loyalty or new consumers, and there is no winner on the chart: the kids and adult samples are for different people in different bases. Talk about each one in its own context.
- Ask: Of C and D, which feels more like TheraBreath?
- Ask: Which of these deserves another round, and what would you change? We're choosing what to work on next, not declaring a consumer winner.
- While they talk, phones are open for the chips. The question is: which flavors or directions should we develop next? Five chips each. The phone shows the four samples under Tasted today, and Global Brightness and Modern Clean under New directions, not tasted today. Stacking is fine. Hand chips go in from the presenter view: anyone without a phone has five chips too, so ask where their five go and add one per chip.
- Build 1 shows the top three and closes the chips on the phones (going back opens them again). Equal chips share a place, and a tie for third keeps both: the room decides which goes on. Everything in the top three, ties included, becomes a row on the next slide.
- If there's time: What would set TheraBreath's flavors apart from what competitors are launching?

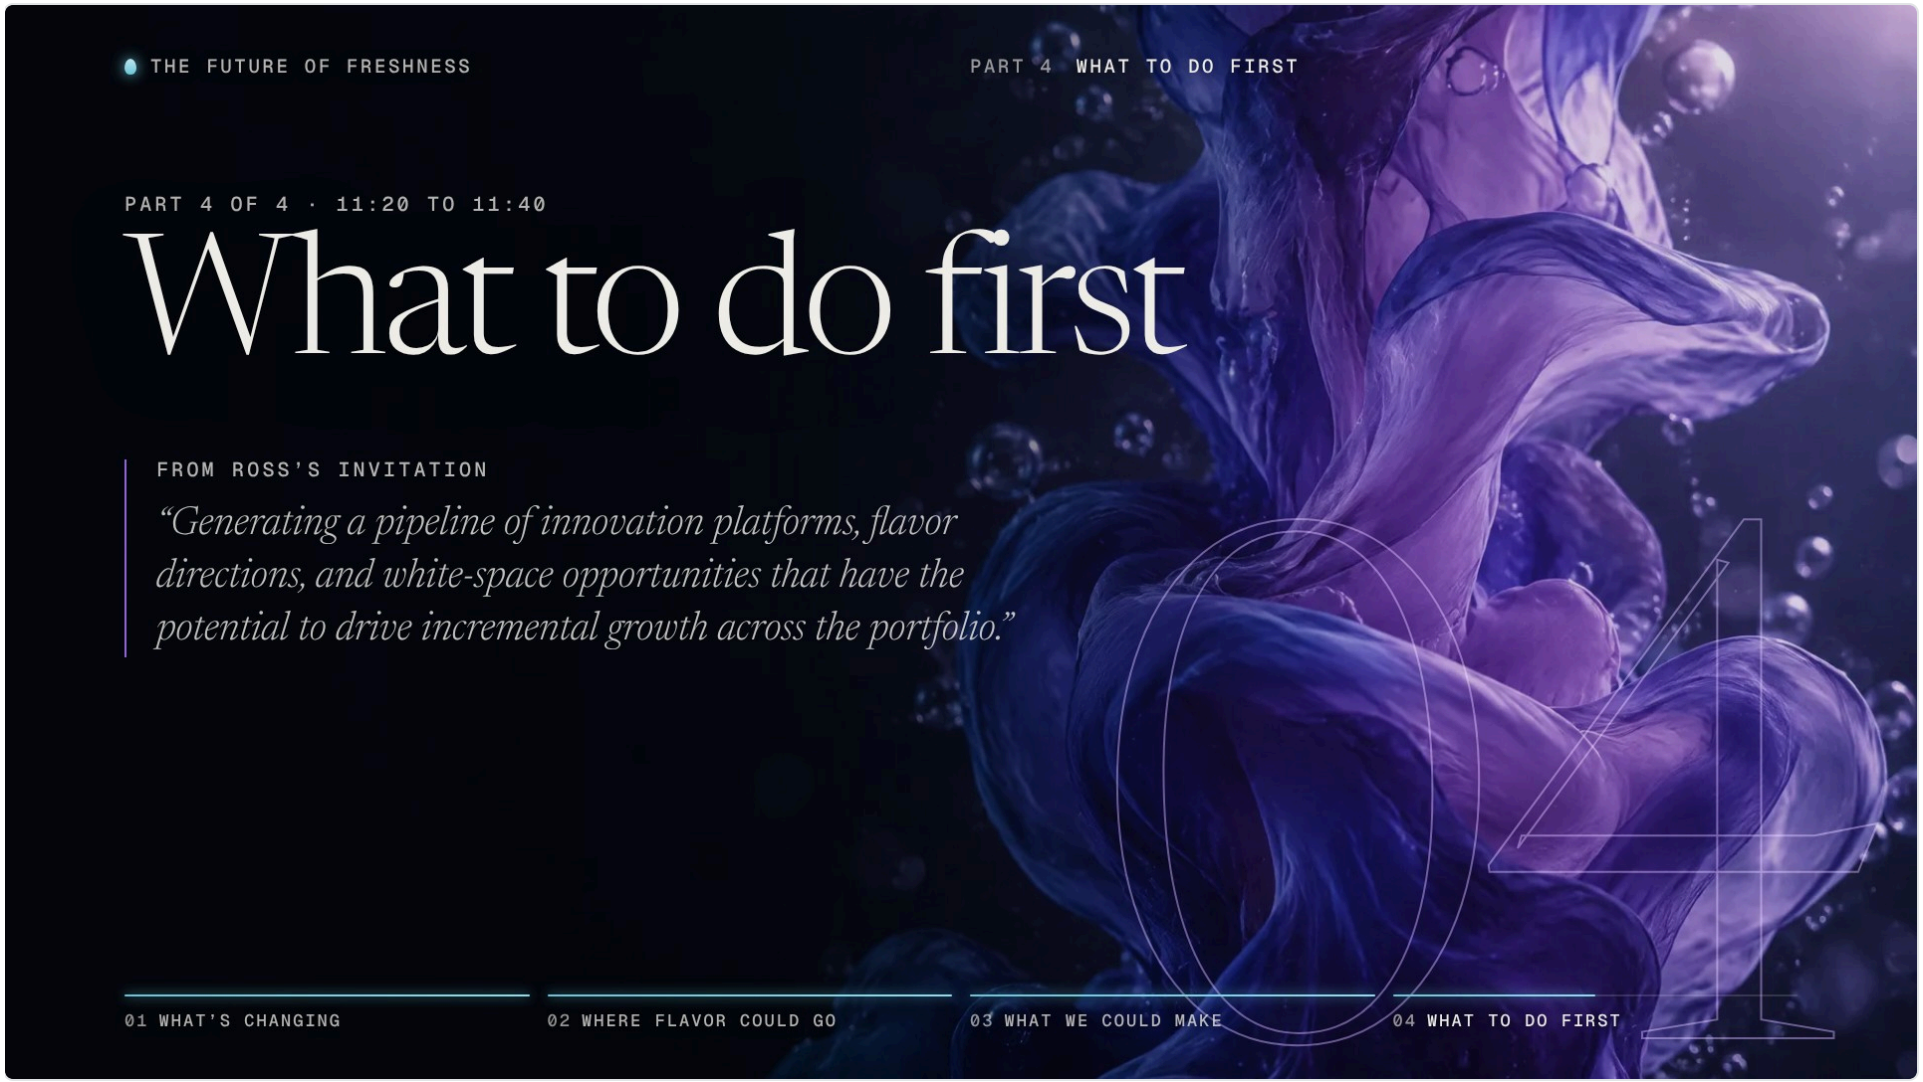

- Part 3 of 4, 11:00 to 11:20. Ross's third objective: Developing innovative flavor concepts that unlock new usage occasions, address new consumer segments, and create opportunities for portfolio expansion.
- This part is the day map and the concept cards, built from the top three chips.

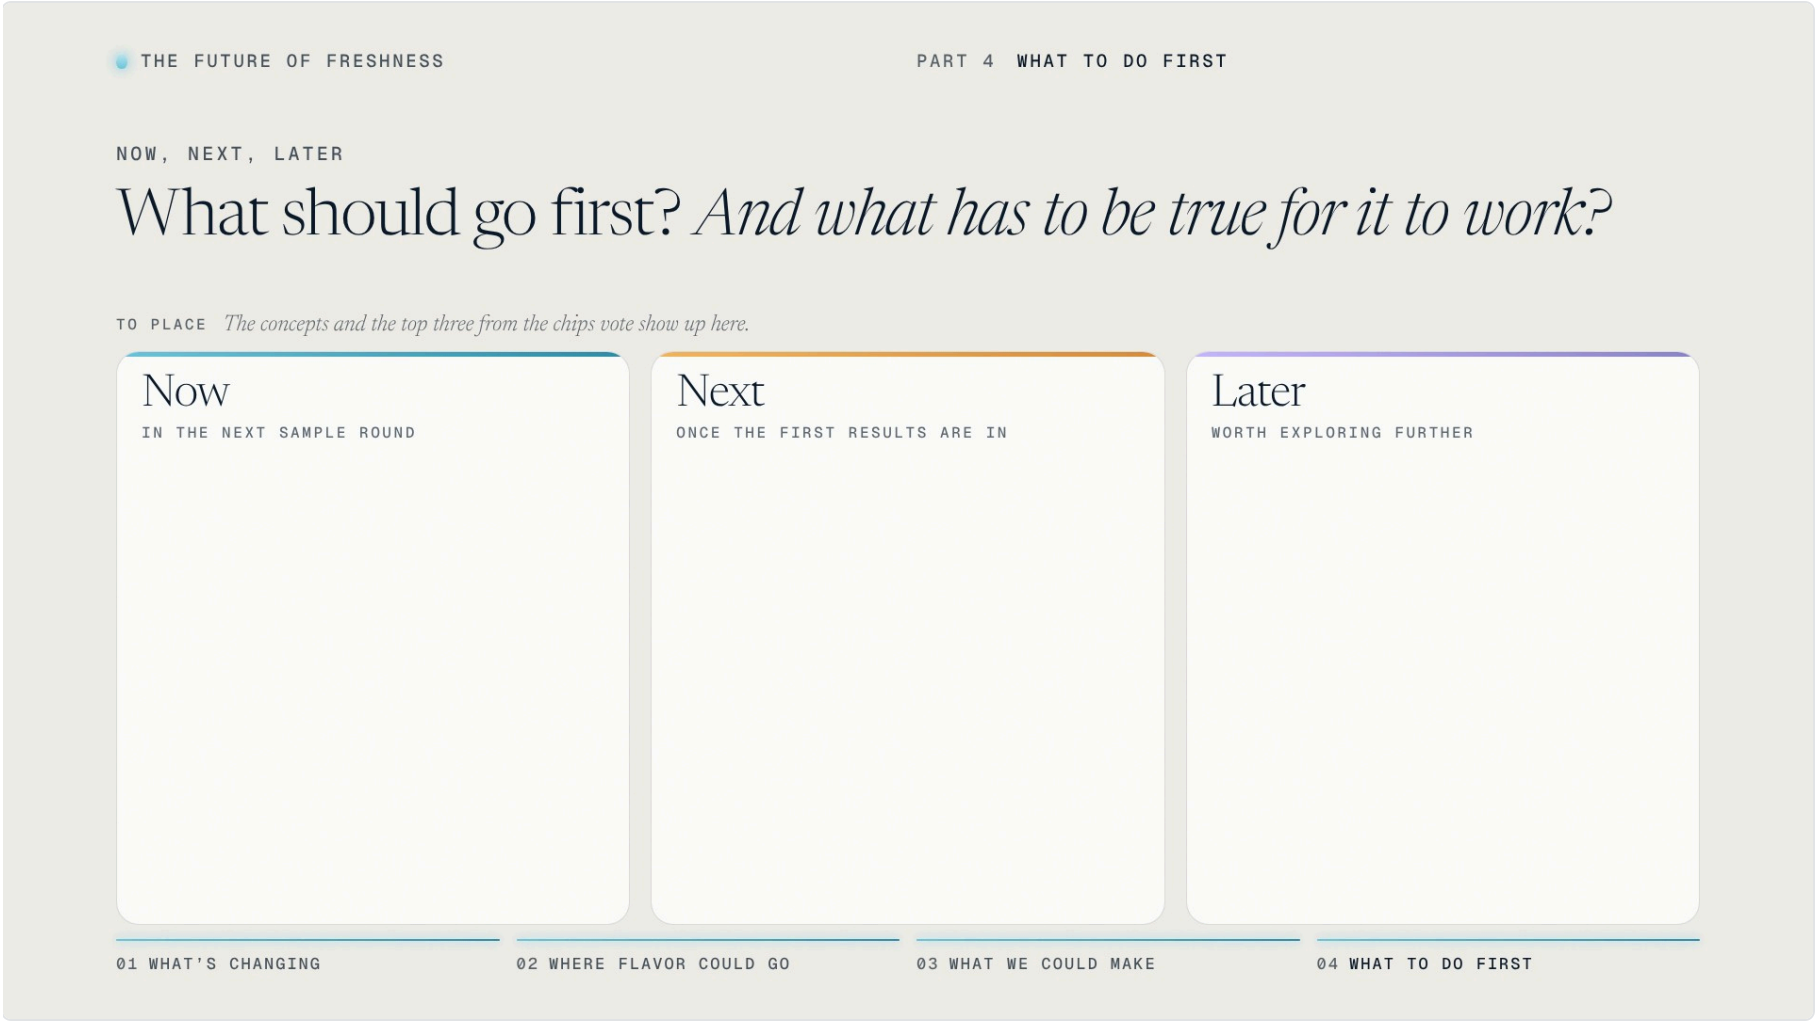

- One arc is the day, from wake-up on the left to wind-down on the right. On the go sits in the middle because it can happen any time.
- Build 1: the rinse bookends the day, in the morning and at night, with lozenges, gum and the new rinse sachets on the go. That's our read of the listings and C&D's Q3 release, so ask them to correct us.
- Build 2: how many pre-briefs named each moment as missing. The most named one glows; if two are tied, both glow.
- Build 3: which occasions could TheraBreath serve better? The other moments say To explore. A blank moment is a question, not a finding, and one product can serve several moments.
- Say: this is our working view of the day, so please correct it. Where could one of these ideas improve a moment you already serve, or meet a need you don't serve well yet?
- One question per idea: what need would it serve better than what's already there? Keep the pre-brief's own words for the moment (after coffee stays after coffee).
- The tray holds the top three from the chips, or all six if no chips came in. Tap a flavor, then a moment, to place it; tap again to take it back. The first place for each becomes the When on its concept card, and the tray says so. If a flavor fits several moments, ask the room which one comes first.

- "These are starter cards. None of the filled-in fields is a decision until we agree it. For this first idea, who is it for, what would it add and what should the next sample do differently?"
- The cards start themselves from the top three in the chips vote, with who it's for from the map and when from the day map. Role in the range and the growth opportunity start empty: that's the room's call.
- One or two well-defined cards beat three thin ones. A third is optional.
- For a tasted sample, the presenter view shows what the tasting said about sweetness and cooling next to the options for the next version.
- Nothing to type. Tap an option to change a field, or swap the card for another from our library (the two example concepts on the run sheet are in it). If the answer isn't there, tap Other, in the notes, write it on the notes sheet and read it back before leaving the card.
- When the room says yes to a card, tap Mark as agreed. The TV then says Agreed, not Starting point for discussion. A card left unmarked is read back and written up as a proposal.

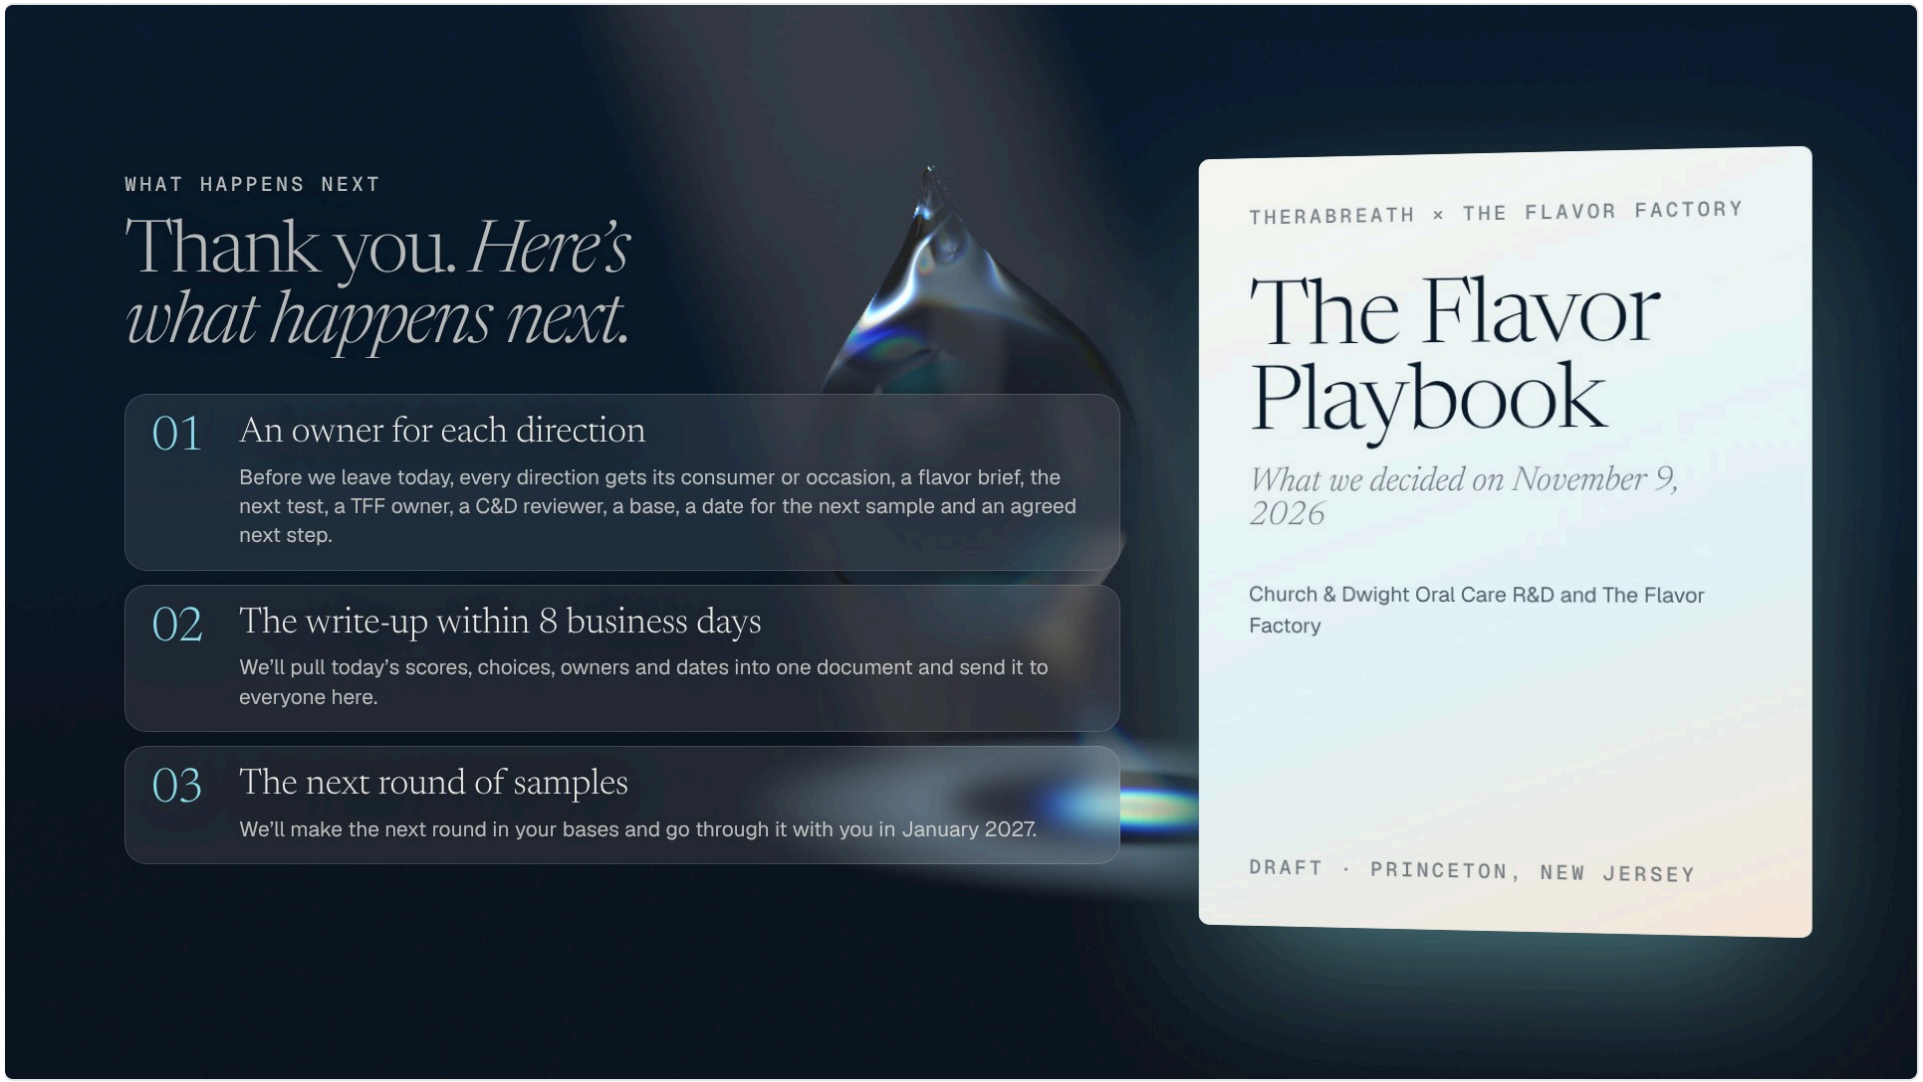

- Part 4 of 4, 11:20 to 11:40. Ross's fourth objective: Generating a pipeline of innovation platforms, flavor directions, and white-space opportunities that have the potential to drive incremental growth across the portfolio.
- Ten to fifteen seconds. If all four objectives were read at the start, don't read this one again.
- "Let's agree what moves now, what needs more evidence and what is worth keeping for later."
- Then: "For anything in Now, we need a clear next step and the people who will take it forward."

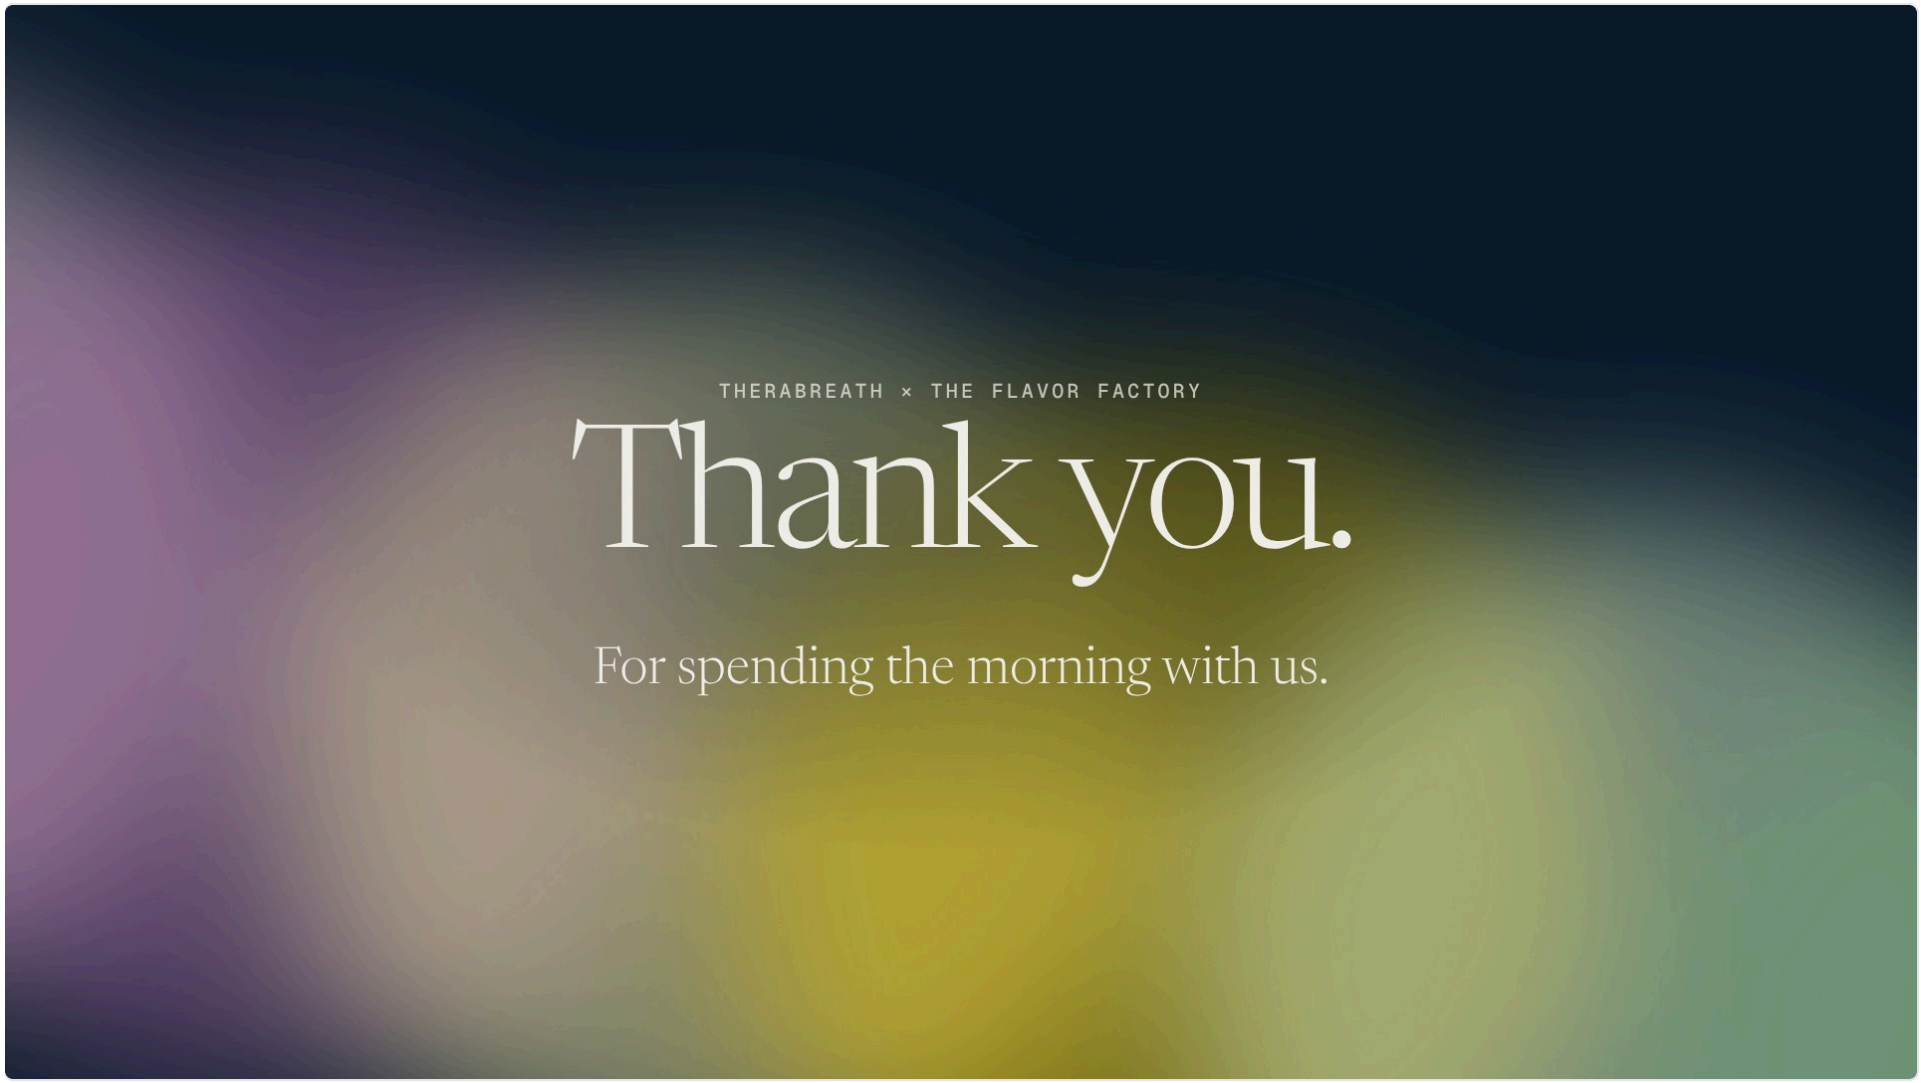

- "Is this the next piece of work we want to do? What must it show, who takes it forward and when should we review it?"
- The concepts and the top three from the chips sit in the tray. Place it when the group agrees: ask for objections or a quick yes, then tap it and tap Now, Next or Later. The board records a decision, it doesn't make one.
- More ideas in the tray holds every other sample and direction, so an idea the vote passed over can still be parked in Later.
- For each Now line, agree in the presenter view: the consumer or occasion, the next version or question to test, the next test, a TFF owner, a C&D reviewer (confirm the person in the room), the base, the date and the next step. The date stays To confirm until the room agrees one.
- The flavor brief drafts itself: from the tasting for a sample, from the map for a direction. It stays a draft until we review it in the write-up, so don't spend the room's time on it.
- If nobody can say yet, tap To confirm and agree who will confirm it. Other, in the notes works here too. The write-up highlights both.

- This pulls together the morning: the trends, the directions, the concepts and the plan. Two to four minutes is enough.
- "Before we finish, let's check that we have this right. These are the ideas moving forward, what the next round needs to answer and who will take each step. These items still need confirming. Is there anything here that doesn't match what we agreed?"
- Builds 1 to 4 open one chapter each at full size. The concepts say Agreed or Proposed, and anything still open reads To agree or To confirm. A score or chip lead isn't a development decision. Read the plan back, owners and all.
- Builds 5 to 7 are the three next steps: an owner for each direction, the write-up within 8 business days and the next round of samples in January 2027. The dates still need confirming before November 9.
- Then thank everyone for their time.

WHAT HAPPENS NEXT
Thank you. Here's what happens next.
01
An owner for each direction
Before we leave today, every direction gets its consumer or occasion, a flavor brief, the next test, a TFF owner, a C&D reviewer, a base, a date for the next sample and an agreed next step.
02
The write-up within 8 business days
We'll pull today's scores, choices, owners and dates into one document and send it to everyone here.
03
The next round of samples
We'll make the next round in your bases and go through it with you in January 2027.
THERABREATH × THE FLAVOR FACTORY
The Flavor Playbook
What we decided on November 9, 2026
Church & Dwight Oral Care R&D and The Flavor Factory
DRAFT · PRINCETON, NEW JERSEY

- Thank everyone for the morning. Questions until 12:00, then lunch, hosted by Church & Dwight.
